As this is a long term project at 100Mil plus where most of the action is coming from people who have vested interest in receiving this \$. we are concerned with what will happen to the wildlife on the river when this starts. It is now coming back to full use since the dam was rebuild.(ducks, turtles, birds, frogs, plants ect. ect. ) If this is the course of action we will loose the wildlife again and when will it return. Will the new liner have any effect on this process? Will it damage the eco system?

I'm concerned about all this \$ being spent while there is still a ongoing pollution problem with the Johnston Asphalt Plant.

We already have a great deal of dirt, dust, and noise from this plant and now we will have to deal with the dirt, dust and noise from this clean up.  
In reality the pond is quite settled as is. It seems that you have already fixed most of the problem at the site of contamination.
