This proposal for CAD cells is reckless and immoral the amount of money we would be saving compared to the outcome of the problem is not even comparable you want to save less than 30% to bury it in relatively the same spot rather than spend that money and get rid of the problem completely and you wouldn't even be saving 30% because with the cost of monitoring over time you would match that cost than this project would become a yearly bill for the city of New Bedford for the rest of time or until our children or our children's children .etc decide to dig it up and do it right. passing the buck is unacceptable which is what has happened to us from passed generations the buck stops here spend the money do it right eliminate the problem for good

Thank you
