EXECUTIVE SUMMARY

On behalf of Massachusetts Clean Energy Center (MassCEC), Apex Companies, LLC (Apex) performed a Phase I Environmental Site Assessment (Phase I ESA) in conformance with the scope and limitations of ASTM Practice E 1527-05 for eight properties in New Bedford (see **Figure 1**), Massachusetts. Any exceptions to, or deletions from, this practice are described in **Section 1.0** of this report.

The eight properties, collectively referred to as the “Subject Properties,” are located on the western side of New Bedford Harbor along the waterfront in an area zoned industrial. The Subject Properties and their corresponding City of New Bedford Parcel identifications include the following.

1. 4 Wright Street (Shuster Corporation) (31 263) – Privately Owned;
2. R ES S Front Street (Shuster Vacant Lot) (31 288) – Privately Owned;
3. NS Blackmer Street (North DMF Property) (25A 53) – Owned by the Commonwealth of Massachusetts;
4. NE Blackmer Street (South DMF Property) (25A 49) – Owned by the Commonwealth of Massachusetts;
5. SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp) (25A 48) – Owned by the New Bedford Redevelopment Authority);
6. NS Gifford Street (City of New Bedford Gifford Street Parcel) (25A 7) – Owned by the City of New Bedford;
7. 46 92 Harbor Street (Hathaway Mills Parcel) (21 30) – Privately Owned; and
8. 45 Cove Street (Former Dartmouth Finishing Site) (21 45) – Owned by the City of New Bedford.

The parcel information is summarized on **Table 1**. The locations of the Subject Properties are shown on **Figure 2**. According to the New Bedford Assessor’s Office, the Subject Properties identified above are approximately a combined 34.82 acres.

The purpose of this Phase I ESA is to perform All Appropriate Inquiries (AAI) into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice for a possible transaction involving the Subject Property and to permit a User to qualify for one of the landowner liability protections as identified by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). This Phase I ESA was performed in accordance Activity 3 of Task Order 9, in association with the detailed scope of work dated June 27, 2011 (attached as **Appendix A**).

Phase I assessment activities included a site inspection, interviews, review of historical and regulatory records, review of aerial photographs, review of historic Sanborn maps, review of historic topographic maps, a review of available information from City of New Bedford files, a review of available information from MassDEP files, a review of previous subsurface investigations conducted on certain subject properties, and review of reports of previous investigations conducted onsite.

The Phase I ESA revealed evidence of Recognized Environmental Conditions (RECs) on six of the properties. The term REC means the presence, or likely presence, of any hazardous substances or petroleum products on the Subject Property under conditions that indicate an existing release, a past release, or a material threat of a release of such materials into the structures on the Subject Property or into the ground, groundwater, or surface water of the Site. The term REC is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

RECs identified on six of the Subject Properties include:

- 4 Wright Street (Shuster Corporation): Total petroleum hydrocarbons (TPH) were detected within a monitoring well on the property during the subsurface investigation conducted by Apex Companies during the spring and summer of 2011. Although the concentration of petroleum hydrocarbons was below reporting criteria, these concentrations may indicate the possibility of a release of petroleum hydrocarbons at a location up-gradient from the monitoring well (which could potentially be associated with the onsite building).
- R ES S Front Street (Vacant Shuster Lot): Historic aerials indicated the operation of a large industrial complex (Potomska Mills Complex) on this property. One historic document indicated that a “gas holder”, which may have been used to store manufactured gas, was located onsite. Additionally, after the facility was demolished, a large dark spot appeared on aerial photos, indicating a pool of liquid of some type.

PCBs, polycyclic aromatic hydrocarbons (PAHs), total petroleum hydrocarbons (TPH), and extractable petroleum hydrocarbons (EPH) were detected in soil/fill samples at several locations at concentrations that exceed their MCP RCS-2 criteria, and one volatile organic compound (VOC; naphthalene) was detected in groundwater on the Shuster Vacant Lot at concentrations that exceeded its MCP RCGW-2 criteria. The detection of these constituents represents a 120-day reporting condition under Section 40.0315(1) of the MCP. The Owner or Operator of this property has an obligation to notify MassDEP of the release conditions within 120 days of obtaining knowledge of the release. Once notification is made of the release condition, a MassDEP RTN would be issued and the property would need to be addressed under the provisions of the MCP.

In addition, the detection of PCBs at concentrations greater than 50 mg/kg on the Shuster Vacant Lot, regardless of the contamination occurring prior to 1978, means these materials would be regulated as a PCB-remediation waste under 40 CFR 761 (TSCA). TSCA authority has not been delegated to any of the states, so both EPA and State (MCP) regulations apply to the PCBs detected in soil on the Shuster Vacant Lot. A PCB Cleanup Plan and Notification are required, and subject to approval, by the United States Environmental Protection Agency (USEPA) Region 1 prior to addressing the PCBs.

Because of the elevated PCBs detected in shallow soils on the Vacant Shuster Lot, Apex evaluated whether an Imminent Hazard Evaluation (IH) condition existed at the property.

Apex concluded that conditions did not currently meet the definition of an IH Condition presented in Section 40.0321 of the MCP. However, due to possible trespassers setting tents on this property, the lack of sanitary facilities, and assumed city ordinances/laws that prohibit this type of activity, Apex recommended that any trespassers be removed and the property be secured to prevent against potential risks to human health, safety and welfare, in order to prevent a future IH Condition.

It is Apex's understanding that the trespassers were evicted as of August 2011, removing the Potential Imminent Hazard condition. It is also Apex's understanding that MassCEC officially notified the owner of the Shuster Vacant Lot of the reporting requirements in September of 2011. It is not clear from online MassDEP sources, whether the owner of the Shuster Vacant Lot has reported the release to MassDEP.

- NS Blackmer Street (North DMF Property): The detection of polychlorinated biphenyls (PCBs) at concentrations above Massachusetts Contingency Plan (MCP; 310 CMR 40.000) Reportable Concentrations (RCs) for soil category S-2. PCBs were detected at 6.4 and 6.2 mg/kg (milligrams per kilogram or parts per million) at test pit locations TP-13 and TP-17, which exceeds the MCP RCS-2 criteria of 3 mg/kg. PCBs above RCs on this property represent a new MCP reporting condition. The detection of the PCBs represents a 120-day reporting condition under Section 40.0315(1) of the MCP. The Owner or Operator of this property has an obligation to notify the Massachusetts Department of Environmental Protection (MassDEP) of the release condition within 120 days of obtaining knowledge of the release. Once notification is made of the release condition, a MassDEP Release Tracking Number (RTN) would be issued and the property would need to be addressed under the provisions of the MCP. It is currently unclear if the Owner or Operator of this property has been notified of the release, and, if so, whether they have reported the release to MassDEP. A wetland area has been located in the northeast portion of this property.
- NE Blackmer Street (South DMF Property): A portion of the DMF properties was identified as a MassDEP disposal site identified by RTN 4-15490. This property has a recorded MCP Activity and Use Limitation (AUL; a deed restriction) that was implemented in 2006 due to the presence of lead, petroleum hydrocarbons and PAHs in fill materials. The source of these constituents was attributed to historic fill materials present on this property. The AUL includes property use restrictions and obligations that should be reviewed and followed prior to property development. Construction of the New Bedford Marine Commerce Terminal will alter the conditions under which the AUL was originally implemented, and will therefore require an alteration to the AUL, or the implementation of a new AUL.
- 46 92 Harbor Street (Hathaway Mills Parcel): Several areas of contamination were outlined within a May 2001 Response Action Outcome (RAO) statement. The primary constituent of concern was petroleum hydrocarbons and PAHs in soil; however, lead was also detected in groundwater in at least one sample collected from a monitoring well. Petroleum hydrocarbon impacts to soil were likely associated with a 100,000 gallon Underground Storage Tank, which was abandoned in-place. PAHs in soil were attributable to coal ash (which is exempt under the MCP). Lead in groundwater was reported to be associated with poor sampling techniques, as re-sampling of the well did not show the presence of the compounds.

Although these issues may have been resolved from a regulatory point of view, the impacts to soil (and potentially groundwater) still may remain, and could therefore impact offsite soil disposal costs when working on this property. A large pile of debris is present currently on the northeast portion of this site.

- 45 Cove Street (Former Dartmouth Finishing Site): This property was identified as a MassDEP disposal site assigned RTN 4-12810. During an inspection of the property by USEPA and MassDEP representatives in 1997, 480 drums, two underground storage tanks (USTs), one aboveground storage tank (AST) and four vats were identified that required emptying of contents and removal from the property. A removal action and assessment activities were performed that resulted in a Class A2 Response Action Outcome (RAO; regulatory endpoint) being filed with MassDEP in 2004.

During a Phase I ESA completed in 2010 for the City of New Bedford by another consultant, RECs were identified at this property that led to additional MCP response actions. A MCP Phase II Comprehensive Site Assessment (CSA) was completed for this property in June 2011 that identified contaminant conditions in soil and groundwater beneath the concrete slab that appear to be inconsistent with the previously filed RAO. In addition, the analysis of stockpiled soil generated during clearing operations and staged above the slab identified contaminant concentrations greater than applicable RCs. These soils were not previously sampled as part of the prior RAO and are located above the slab, suggesting a different exposure assumption.

The report concluded that detection of contaminant concentrations in soil (petroleum, lead and semi-volatile organic compounds (SVOCs) and metals) and groundwater (silver) above applicable RC's constituted a 120-day notification obligation to MassDEP. It is Apex's understanding that the City of New Bedford has reported these additional concerns to MassDEP; however, it is currently uncertain what (if any) implications will come from these new reporting conditions in association with the planned New Bedford Marine Commerce Terminal, including whether or not the soil piles onsite may be reused, or whether they will have to be disposed of offsite.

In addition to the above RECs, coal and/or coal ash was observed at various locations on the Subject Properties during subsurface explorations. PAHs and various metals are often associated with coal and coal ash. Should future development involve soil excavation and off-property export of soil, it should be anticipated that these materials may contain elevated levels of PAHs and possibly metals and as such would need to be disposed of at an appropriately permitted facility. We recommend preparation of a Soil Management Plan (SMP) developed by a Licensed Site Professional (LSP) prior to excavation and off-property(s) disposal of any soil or fill so that these materials are managed appropriately.

Apex also recommends that a hazardous material building survey be performed in any existing structures on the Subject Properties prior to renovations and/or demolition so that potential materials (e.g., asbestos, lead paint, mercury containing switches) are identified that may require special handling and disposal.

1.0 INTRODUCTION

Apex Companies, LLC (Apex), on behalf of Massachusetts Clean Energy Center (MassCEC; the Client), performed a Phase I Environmental Site Assessment (ESA) of eight properties in New Bedford, Massachusetts (see **Figure 1** for Site Location Map).

The eight properties and their corresponding City of New Bedford parcel identifications include the following.

1. 4 Wright Street (Shuster Corporation) (31 263) – Privately Owned;
2. R ES S Front Street (Shuster Vacant Lot) (31 288) – Privately Owned;
3. NS Blackmer Street (North DMF Property) (25A 53) – Owned by the Commonwealth of Massachusetts;
4. NE Blackmer Street (South DMF Property) (25A 49) – Owned by the Commonwealth of Massachusetts;
5. SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp) (25A 48) – Owned by the New Bedford Redevelopment Authority);
6. NS Gifford Street (City of New Bedford Gifford Street Parcel) (25A 7) – Owned by the City of New Bedford;
7. 46 92 Harbor Street (Hathaway Mills Parcel) (21 30) – Privately Owned; and
8. 45 Cove Street (Former Dartmouth Finishing Site) (21 45) – Owned by the City of New Bedford.

The parcel information is summarized on **Table 1**. These eight properties are collectively referred to as the “Subject Properties”. The locations of the Subject Properties are shown on **Figure 2**.

The following sections provide general information regarding the purpose and scope of the ESA.

1.1 Purpose

Apex has prepared this Phase I ESA at the request of MassCEC (the “User” of this Phase I ESA). The purpose of this Phase I ESA is to perform All Appropriate Inquiry (AAI) into the previous ownership and uses of the Subject Properties consistent with good commercial or customary practice and to permit a User to qualify for one of the landowner liability protections as identified by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

1.2 Scope of Services

This Phase I ESA was performed in accordance Activity 3 of Task Order 9, in association with the detailed scope of work dated June 27, 2011 (attached as **Appendix A**). The scope of services included the completion of a Phase I ESA in a manner generally consistent with the American Society for Testing Materials (ASTM) Standard Designation: E-1527-05 “*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment*”

Process,” and the U.S. Environmental Protection Agency’s Standards and Practices for AAI (40 CFR, Part 312).

The scope of services comprising this Phase I ESA was conducted to provide a reasonable level of investigation to identify Recognized Environmental Conditions (RECs). As defined by ASTM standards, the terms “RECs” or “*Recognized Environmental Conditions*” mean the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products even under conditions in compliance with the laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate government agencies.

The identification of an issue as a REC is subjective. Issues of concern may also be identified in this report as a “Finding.” Findings are issues identified during the performance of the Phase I ESA that may be a REC under certain circumstances or that may require some level of follow-up actions which are beyond the scope of this Phase I ESA. Findings should be considered in the overall evaluation of the environmental quality of the Subject Properties.

1.3 Assumptions, Limitations and Exceptions

This report was prepared as a result of a contractual agreement that defined the approach and scope of services to be employed during the course of the investigation. The Subject Properties for this Phase I ESA were identified by MassCEC. The opinions and conclusions expressed in this study have been based strictly on the results of these contracted services. The scope of this Phase I ESA is intended to aid in the evaluation of RECs. The services provided by Apex should not be construed as a warranty or guarantee that no RECs exist at the site or that all RECs have been uncovered. No conclusions are stated or implied concerning the suitability of the Subject Properties for its eventual use. This document is not intended for purposes other than those expressly set forth herein or for use by parties other than for whom it has been prepared.

As limited by the ASTM Standard for Phase I ESAs, and Apex’s scope of work, this project did not include any sampling or testing of building materials. Additionally, Apex’s scope of work explicitly excluded sampling for asbestos, lead-based paint, and radon, as well as determination/delineation of wetlands, regulatory compliance, cultural resources, mold, industrial hygiene, health and safety, ecological resources, endangered species, and high voltage power lines.

Apex has performed the historical and environmental record searches in accordance with current ASTM and industry practices. The data, findings, and conclusions presented in this Phase I ESA are based upon a detailed search, review, and analysis of the documents and interviews as well as observations made during the Subject Properties reconnaissance. In an attempt to meet the prior use requirements of ASTM E 1527-05, Apex reviewed reasonably ascertainable standard and other practically reviewable historical sources. The ASTM Standard Practice for Phase I ESAs requires that site history be evaluated dating back to 1940

or prior to the first observable use of a property, whichever is earlier. The earliest historic source consulted that showed sufficient detail on the Subject Properties was an 1888 Sanborn map, which depicted the Subject Properties as vacant land.

Apex reviewed MassDEP information and visited local municipal offices regarding the Subject Properties and surrounding properties of potential environmental concern. Based on the information reviewed by Apex, potential environmental concerns were identified on the Subject Properties that were assessed during the Phase I ESA. RECs, Historic RECs and Findings were identified and are summarized in **Section 9.0**.

Conclusions reached regarding the conditions of the Subject Properties represent the summation of the review of available documentation, interviews, site investigations, as well as the results of samples collected from their respective locations only, and do not represent a warranty that all areas within the Subject Properties are of a similar quality as may be inferred from observable property conditions and available property histories. As stated in the ASTM standard, no Phase I ESA can wholly eliminate uncertainty regarding the potential for environmental liability in connection with the Subject Properties. Apex's evaluation and analysis are intended to reduce, not eliminate, the potential for conditions that result in liability for the end user of this Phase I ESA.

1.4 Special Terms and Conditions

This Phase I ESA was performed in accordance Activity 3 of Task Order 9, in association with the detailed scope of work dated June 27, 2011 (attached as **Appendix A**), and as stated in this report. There are no other special terms or conditions concerning this project.

1.5 User Reliance

This report documents the Phase I ESA of the Subject Properties performed by Apex in accordance with accordance Activity 3 of Task Order 9, in association with the detailed scope of work dated June 27, 2011 (attached as **Appendix A**). The Subject Properties were identified by MassCEC. The findings, opinions, and conclusions of this Phase I ESA are for the exclusive use of MassCEC. Reliance on this report for any use or by parties other than specifically stated is prohibited without the expressed written consent of Apex, and such use is at the sole risk of the user. This document is not intended for purposes other than those expressly set forth herein or for use by parties other than for whom it has been prepared.

2.0 SITE DESCRIPTION

The Subject Properties are identified on **Table 1** and their locations are shown on **Figure 2**. Parcel references on **Table 1** and within this ESA Report are as they appeared in the City of New Bedford Assessor's database. According to the New Bedford Assessor's Office, the Subject Properties identified above are approximately a combined 34.82 acres.

2.1 Site Location

The Subject Properties are located along the waterfront on the western side of New Bedford Harbor in an area zoned industrial. The locations of the parcels comprising the Subject Properties are shown on **Figures 1 through 3**. A summary of property ownership and location for each of the properties is presented below with “Property #'s” cross-referenced to those presented on **Table 1** and on **Figure 2**.

Property #1 - 4 Wright Street (Shuster Corporation): This property is situated between Wright Street to the north and the Shuster Vacant Lot to the south. The property consists of a single parcel of land totaling approximately 2.94 acres. A Site Locus Map is provided as **Figure 2**. Other property details are provided below.

- Site Owner: Richard Shuster
- Site Occupants: Shuster Corporation. Eastern portion is paved. Eastern bulkhead is used for berthing of fishing vessels.
- Site Location: 4 Wright Street, New Bedford, Massachusetts
- County: Bristol
- Parcel ID: Map 31 Lot 263

Property #2 - R ES S Front Street (Shuster Vacant Lot): This property is situated between 4 Wright Street to the north and NS Blackmer Street to the south. The property consists of a single parcel of land totaling approximately 7.75 acres. A Site Locus Map is provided as **Figure 2**. Other property details are provided below.

- Site Owner: RIST, LLC
- Site Occupants: Vacant
- Site Location: 4 Wright Street, New Bedford, Massachusetts
- County: Bristol
- Parcel ID: Map 31 Lot 288

Properties #3 and #4 - NS Blackmer Street (North DMF Property) and NE Blackmer Street (South DMF Property): These properties are situated between the R ES S Front Street to the north and SE Blackmer Street to the east and south. The property consists of a two parcels of land totaling approximately 3.41 acres. A Site Locus Map is provided as **Figure 2**. Other property details are provided below.

- Site Owner: Commonwealth of Massachusetts
- Site Occupants: Vacant. Portions of Site are paved. Site is fenced.
- Site Location: 16 Blackmer Street, New Bedford, Massachusetts
- County: Bristol
- Parcel ID: Map 25A Lot 53 and Map 25A Lot 49

Property #5 - SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp): This property is situated to the east of the North and South DMF Properties, and contains an easement which runs immediately to the south of the South DMF

Property. The property included both coastal land east of the DMF Properties and the Gifford Street Boat Ramp. The two parts to the parcel are connected by a thin strip of land along the coast. The property consists of a single parcel of land totaling approximately 9.23 acres. A Site Locus Map is provided as **Figure 2**. Other property details are provided below.

- Site Owner: New Bedford Redevelopment Authority
- Site Occupants: Beach area is vacant. Southern Portion contains Gifford Street Boat Ramp
- Site Location: Blackmer Street and Gifford Street, New Bedford, Massachusetts
- County: Bristol
- Parcel ID: Map 25A Lot 48

Property #6 – NS Gifford Street (City of New Bedford Gifford Street Parcel): This property is situated to the west of the Gifford Street Boat Ramp, along Gifford Street. The property consists of a single parcel of land totaling approximately 0.87 acres. A Site Locus Map is provided as **Figure 2**. Other property details are provided below.

- Site Owner: City of New Bedford
- Site Occupants: Paved Lot, Currently Utilized Under Lease by Bayline Boat Yard.
- Site Location: Gifford Street, New Bedford, Massachusetts
- County: Bristol
- Parcel ID: Map 25A Lot 7

Property #7 – 46 92 Harbor Street (Hathaway Mills Parcel): This parcel is an irregularly shaped lot that borders Cove Street on the south, Harbor Street on the west, the Former Dartmouth Finishing Site on the south and east, and Gifford Street on the north. It is Apex's understanding that the Commonwealth plans to utilize (likely via an easement) the portion of the property immediately to the north of the Former Dartmouth Finishing Site (a narrow strip that runs parallel to Gifford Street), so as to be able to access Gifford Street from the Former Dartmouth Finishing Site; therefore, the focus of comments within this document is on this portion of the Hathaway Mills Parcel. The property consists of a single parcel of land totaling approximately 6.32 acres. A Site Locus Map is provided as **Figure 2**. Other property details are provided below.

- Site Owner: Hathaway Mills, LLC
- Site Occupants: Mill building on much of the property (occupied by multiple small companies); however, the area north of the Former Dartmouth Finishing Site is vacant, and contains a large pile of demolition debris and rocks.
- Site Location: 84 Gifford Street, New Bedford, Massachusetts
- County: Bristol
- Parcel ID: Map 21 Lot 30

Property #8 - 45 Cove Street (Former Dartmouth Finishing Site): This property is situated between the Hathaway Mills Parcel to the north and west, Cove Street to the south and is located within the Cove Street Mill Overlay District (COSMOD) of the City of New Bedford. The COSMOD provides adequate minimum standards and procedures for the

construction of new housing facilities and rehabilitation of existing structures to promote economic and cultural development in this area. The property consists of a single parcel of land totaling approximately 4.3 acres. A Site Locus Map is provided as **Figure 2**. Other property details are provided below.

- Site Owner: City of New Bedford
- Site Occupants: Vacant
- Site Location: 45 Cove Street, New Bedford, Massachusetts
- County: Bristol
- Parcel ID: Map 21 Lot 45

2.2 Site and Vicinity General Characteristics

The Subject Properties are located in an urban coastal setting in a mixed commercial and residential area with a few isolated industrial properties located north, south and west of the Subject Property and on the opposite side of Wright Street, Blackmer Street, Gifford Street and Cove Street. The Subject Properties are bounded by Wright Street to the north, private properties and Blackmer Street to the west, and Cove Street to the south.

This area has historically been occupied by a mix of commercial and residential properties with some mill buildings and light industrial properties a few of which are still present among all properties.

2.3 Current Site Use and Improvements

Apex conducted a Site Reconnaissance on September 23, 2011 that covered the eight properties that comprise the Subject Properties. Apex visits the area of the properties very frequently, and has not noted substantial changes between the date of its Site Reconnaissance and the date of this report. The general area of the Subject Properties is shown on the Site Locus Map provided in **Figure 2**. Consistent with **Section 2.1**, the Subject Properties are identified by the “property #'s” presented in **Table 1 and Figure 2**.

Property #1 - 4 Wright Street (Shuster Corporation): Currently occupied by the Shuster Corporation and is used for industrial purposes.

Property #2 – R ES S Front Street (Shuster Vacant Lot): Currently vacant land. Building debris that are remnants of the former Potomska Mill Complex are noticeable at locations throughout the property with the majority being observed on the eastern side of the property. Much of this property is overgrown with vegetation.

Property #3 and #4 – NS Blackmer Street (North DMF Property) and NE Blackmer Street (South DMF Property): Currently vacant. The property is partially paved and enclosed by a locked chain-link fence. The northeast side of the property contains an inland wetland area.

Property #5 – SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp): Northern portion of the property is an unimproved beach area. An easement

that reaches from Blackmer Street and heads directly east ends in a stormwater pipe that discharges into New Bedford Harbor. The southern stretch of beach contains a salt marsh area. South of the marsh is Gifford Street Boat Ramp, which is improved by a public boat ramp and parking area and a floating dock. An area immediately to the west of the paved Boat Ramp Area is unimproved and may be a filled former salt marsh area.

Property #6 - NS Gifford Street (City of New Bedford Gifford Street Parcel): Currently improved by a paved parking lot that is used utilized by Bayline Boat Yard (under lease with the City of New Bedford) for boat storage and access to the Gifford Street Boat Ramp.

Property #7 – 46 92 Harbor Street (Hathaway Mills Parcel): Parcel contains former Hathaway Mills building on much of the property (occupied by multiple small companies); however, the area north of the Former Dartmouth Finishing Site is currently vacant, and contains a large pile of demolition debris and rocks.

Property #8 - 45 Cove Street (Former Dartmouth Finishing Site): Currently vacant. This property was observed to be overgrown with vegetation and areas of standing water were observed. The building basement floor slab and foundation walls of a former boiler room were noted on the western portion of the property. Piles of demolition debris were observed on the property.

2.4 Current Use of Adjoining and Surrounding Properties

Apex performed a reconnaissance of adjacent and surrounding properties to identify visual evidence of apparent or potential sources of environmental concern. Surrounding properties included the following:

Property #1 - 4 Wright Street (Shuster Corporation):

North and West: The Subject Property is bordered to the north and west by fish processing plants (industrial businesses).

South: The Subject Property is bordered by the Shuster Vacant Lot;

East: The Subject Property is bordered by New Bedford Harbor;

Property #2 – R ES S Front Street (Shuster Vacant Lot):

North: The Subject Property is bordered to the north by fish processing plants (industrial businesses) and the Shuster Corporation property.

South: The Subject Property is bordered by NS Blackmer Street (North DMF Property);

West: The Subject Property is bordered by a radio broadcast company. The majority of the property is vacant, however.

East: The Subject Property is bordered by New Bedford Harbor;

Property #3 and #4 – NS Blackmer Street (North DMF Property) and NE Blackmer Street (South DMF Property):

North: The Subject Property is bordered to the Shuster Vacant Lot.

South and East: The Subject Property is bordered by SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp);

West: The Subject Property is bordered by Blackmer Street and a fish processing plant to the west (industrial property).

Property #5 – SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp):

North: The Subject Property is bordered to the north by the Vacant Shuster Lot and the NE Blackmer Street (South DMF Property).

South: The Subject Property is bordered by Gifford Street. A former mill building is across the street;

West: The Subject Property is bordered to the west by NS Blackmer Street (North DMF Property) and NE Blackmer Street (South DMF Property), by a fish processing plant (industrial property), by NS Gifford Street (City of New Bedford Gifford Street Parcel), and by Bayline Boat Yard (an industrial boat storage and repair facility).

East: The Subject Property is bordered by New Bedford Harbor;

Property #6 - NS Gifford Street (City of New Bedford Gifford Street Parcel):

North and East: The Subject Property is bordered to the north and east by SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp).

South: The Subject Property is bordered by Gifford Street. The Hathaway Mills Parcel is located to the south of Gifford Street.

West: The Subject Property is bordered to the west by Bayline Boat Yard (an industrial boat storage and repair facility).

Property #7 – 46 92 Harbor Street (Hathaway Mills Parcel):

North: The Subject Property is bordered to the north by the Gifford Street, and by the Bayline Boat Yard property.

South: The Subject Property is bordered to the south by Cove Street, on the other side of which is a residential neighborhood. Another portion of the southern boundary of the property is opposite the Former Dartmouth Finishing Site.

West: The Subject Property is bordered to the west former mill buildings now utilized by multiple small companies.

East: The Subject Property is bordered by the Former Dartmouth Finishing Site;

Property #8 - 45 Cove Street (Former Dartmouth Finishing Site):

North and West: The Subject Property is bordered to the north by the Hathaway Mills Parcel.

South: The Subject Property is bordered to the south by Cove Street, on the other side of which is a residential neighborhood.

West: The Subject Property is bordered to the east by former mill buildings now utilized by multiple small companies.

3.0 USER PROVIDED INFORMATION

User provided information, including prior environmental reports on the Subject Properties, is incorporated into this report where applicable. Refer to **Appendix J** for Previous Environmental Reports.

4.0 RECORDS REVIEW

4.1 Environmental Database Review

Apex reviewed information gathered from the Environmental Protection Agency (EPA) and State of Massachusetts (MA) environmental databases by Environmental Data Resources, Inc. (EDR) to evaluate activities on or near the Subject Property. The complete list of databases reviewed by EDR is provided in their report, which is included on compact disc (CD) in **Appendix B and C** of this report. The information is reported as Apex received it from EDR, which in turn reports information as it is provided from various government databases. It is not possible for either Apex or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. A description of the databases searched and the information included in the EDR reports.

The EDR report identifies the target property and thirty-four state/tribal equivalent CERCLIS sites located within a 0.5-mile radius of the target property. Of the listed sites, thirty-two are located more than 0.25 mile from the target property and are not likely to pose a threat to the subsurface conditions of the target property based upon the release conditions, distance/gradient relative to the target property, and/or closed regulatory status. Information

regarding the target properties listing and the two sites located within 0.25-mile radius of the target properties.

As discussed in **Section 7.0** of this report, investigation activities were performed that included the advancement of test pits and installation of monitoring wells. The majority of subsurface investigations were on five of the subject properties. Depth to groundwater was typically encountered within 5 feet of ground surface. Due to the Subject Properties proximity to New Bedford Harbor, groundwater in this area is tidally influenced with the predominant flow direction being easterly towards the Harbor.

4.1.1 On-Site Properties

The EDR report identified two of the Subject Properties in its database. The properties were identified as 16 Blackmer Street (which corresponds to NS Blackmer Street and NE Blackmer Street, the North and South DMF Properties), 45 Cove Street (Former Dartmouth Finishing Site), 84 Gifford Street, and CV and Gifford Street (which appears to be the same location as 84 Gifford Street and the Hathaway Mills Parcel):

- “16 Blackmer Street” is a MassDEP disposal site identified by RTN 4-15490 and has an AUL implemented on the property.
- “45 Cove Street” is a MassDEP disposal site identified by RTN 4-12810. This RTN achieved a RAO in 2004. However, as discussed in greater detail in **Section 4.5**, recent Phase I and Phase II work conducted by the City of New Bedford in 2010 identified RECs. Follow-up MCP response actions indicate a new MCP reporting condition and environmental conditions not consistent with the existing RAO.
- Two releases have been reported at the Hathway Mills Parcel, under different names:
 - At “84 Gifford Street”, a spill of diesel fuel occurred from a truck and was (reportedly) immediately cleaned up. This spill appears to have occurred on the Hathaway Mills Parcel.
 - At “CV and Gifford Street” site involved constituents detected in soil (fill materials). This release appears to have occurred on the Hathaway Mills Parcel.

4.1.2 Off-Site Properties

Apex has reviewed the RCRA generators lists, State and tribal storage tank lists, records of emergency reports and other ascertainable records listed in the 2011 EDR report.

Nearby spill sites listed in the EDR report are summarized in **Table 3**. As summarized on **Table 3**, four MassDEP disposal sites were identified in the area of the Subject Properties of the spill sites identified in **Table 3 and Figure 3**, two are located in proximity to the Subject Properties (primarily 4 Wright Street/Shuster Corporation) with assumed cross-gradient locations (15 South Street and 14 Hassey Street). Both locations have documented impacts to groundwater and are closed per DEP under an A2 Response Action Outcome (RAO; the regulatory endpoint under the Massachusetts Contingency Plan). Assessor’s office records

indicate 14 Hassey Street is owned by Northern Wind Seafood and 15 South Street is owned by David Demello. Due to the Subject Properties proximity to New Bedford Harbor, groundwater in this area is anticipated to be tidally influenced with the predominant flow direction being easterly towards the Harbor. Due to the site's cross-gradient locations they are not anticipated to be a significant threat to soil or groundwater quality at the Subject Properties.

One of the spill sites is located west of the subject properties in potentially upgradient locations: 97 Cove Street. The 97 Cove Street site involved a release of No. 6 fuel oil. Due to the viscous nature of No. 6 fuel oil and lack of migration potential, although the possibility for migration exists, this spill is not anticipated to be a significant threat to soil or groundwater quality at the Subject Properties, primarily the Former Dartmouth Finishing Site and the Hathaway Mills Parcel.

An additional release was noted at 21 Cove Street, a spillage of approximately 200 gallons of Fuel Oil. This is a large quantity of oil to have been released, and the release appears to have been immediately adjacent to the Former Dartmouth Finishing Site (the records state that the release happened in the alley between 21 Cove Street and 45 Cove Street; however, no alley is currently visible from aerial photos. It is possible that this release may have impacted the Former Dartmouth Finishing Site. A Class A-1 RAO was implemented for this site in 2004.

Soil and/or groundwater on these properties were impacted by petroleum-related constituents. Based on the disposal site boundaries, contaminant distribution, and the measured groundwater flow direction for the two properties described in the regulatory submittals, the two disposal sites appear to be located cross-gradient to the Subject Property and are not anticipated to significantly impact soil or groundwater quality at the Subject Property.

Apex also reviewed the database listing of unmapped sites, which are sites that have not been geocoded based upon a lack of sufficient data regarding their exact location. The review of unmapped sites did not identify properties that are likely to have an adverse impact to the Subject Properties.

4.2 Environmental Liens

A report on Liens was provided by EDR and is included as **Appendix G**. A deed restriction was identified for an AUL located at 16 Blackmer Street (NS Blackmer Street/North DMF Property and NE Blackmer Street/South DMF Property). The AUL has been put in place to prevent disturbance of environmental impacts to soil in this location. The AUL requires maintenance of an existing asphalt cap or replacement with either a 3" concrete cap, a building, or three feet of clean soil at these properties.

4.3 Physical Setting Sources

Sources consulted to characterize the physical setting of the Subject Property and results are presented below.

According to the EDR Radius Map Report dated July 6, 2011, the Subject Properties are situated approximately 0 to 10 feet above mean sea level (AMSL). According to the United States Geological Survey (USGS) 7.5-minute topographic map of the area (New Bedford North, MA 1979), the Subject Properties are relatively flat, as confirmed during the site inspection.

4.4 Historical Use Information

The Subject Properties are identified by the “property #'s” presented in **Table 1 and Figure 2**. A summary of historic use information is presented in **Table 2**, which was compiled with information gathered from City of New Bedford offices, as well as information from Historic Topographic Maps (**Appendix D**), Historic Sanborn Fire Insurance Maps (**Appendices E and F**) and Historic Aerial Photographs of the site (**Appendix H**).

Property #1 - 4 Wright Street (Shuster Corporation): The site was created during the construction of South Terminal in the 1960s (previously the area was below Mean High Water). The site was vacant prior to the construction of the existing building, currently utilized by the Shuster Corporation. The building was constructed in 1978.

Property #2 – R ES S Front Street (Shuster Vacant Lot): The site was occupied by a textile mill (Potomska Mills) from between at date earlier than 1888. **Figure 4** shows an approximate overlay of the existing property with the outline of the Former Potomska Mills, based on historic records. Mill operations ceased in the 1930s, the buildings were demolished by 1935, and the site has remained largely unoccupied and unused since; however, the site was utilized by the U.S. Army Corps of Engineers as a staging area for the construction of the New Bedford Hurricane Barrier.

Property #3 and #4 – NS Blackmer Street (North DMF Property) and NE Blackmer Street (South DMF Property): The site was occupied by a textile mill (Potomska Mills) from between at date earlier than 1888. **Figure 4** shows an approximate overlay of the existing property with the outline of the Former Potomska Mills, based on historic records. Mill operations ceased in the 1930s, the buildings were demolished by 1935, and the site has remained largely unoccupied and unused since; however, the site was utilized by the U.S. Army Corps of Engineers as a staging area for the construction of the New Bedford Hurricane Barrier. The site is currently vacant, but has been improved with fencing, asphalt paving, and stormwater drainage utilities. The site has an Activity and Use Limitation that requires maintenance of the asphalt cap, due to soil contamination onsite.

Property #5 – SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp): The northern portion of the property may have been utilized by either the Potomska Mills Corporation (Areas North of Blackmer Street) or the Acushnet Mills Corporation (Areas South of Blackmer Street). The southeastern portion of the property was constructed by the U.S. Army Corps of Engineers during the construction of the New Bedford Hurricane Barrier (previously, this portion of the property was below Mean High Water). Currently vacant beach area in the northern portion of the parcel, a stormwater drainage easement runs from Blackmer Street and discharges into New Bedford Harbor. The southern

portion of the parcel is improved by a public boat ramp and parking area. The southwest portion of the parcel is vacant.

Property #6 – NS Gifford Street (City of New Bedford Gifford Street Parcel): The property was once occupied by the Acushnet Mills Corporation. Portions of the property were used as warehouse building space. The property is currently paved, and is utilized for boat storage by Bayline Boat Yard (under lease with the City of New Bedford).

Property #7 – 46 92 Harbor Street (Hathaway Mills Parcel): Area appears to have been undeveloped until the early 1900s, at which time the area initially was labeled as being part of “Dartmouth Mills”. Documentation by the 1950s indicated the presence of the Hathaway Manufacturing Company that then transitioned to ownership by the Berkshire-Hathaway, Inc. company by the 1990s. The main mill building associated with this parcel is still standing, and is occupied by various small businesses. The northeast portion of the property contained storage buildings since the original construction of the facility that were demolished between 1995 and 2009. The northeast portion of the property is currently vacant and occupied by a large pile of building rubble.

Property #8 – 45 Cove Street (Former Dartmouth Finishing Site): Area appears to have been undeveloped until the early 1900s, at which time the area initially was labeled as being part of “Dartmouth Mills”. The mill buildings were demolished between 1995 and 2007. Records indicate that the property was obtained by the City of New Bedford as a tax foreclosure in June 2007. The property is currently vacant, containing piles of rubble, and the foundation from the old mill building.

4.5 Prior Environmental Investigations

Apex reviewed environmental reports that were prepared for several of properties that comprise the Subject Properties. References for the provided reports are summarized in **Section 11.0**. Detailed information is contained in the prior environmental reports included as **Appendix J**.

45 Cove Street (Former Dartmouth Finishing Site): This property is a MassDEP disposal site with a release tracking number of RTN 4-12810. During an inspection of the property by USEPA and MassDEP representatives in 1997, 480 drums, two underground storage tanks (USTs), one aboveground storage tank (AST) and four vats were identified that required emptying of contents and removal from the property. A removal action and assessment activities were performed that resulted in a Class A2 Response Action Outcome (RAO; regulatory endpoint) being filed with MassDEP in 2004. However, during a Phase I ESA in 2010 by another consultant, RECs were identified at this property that led to additional MCP response actions. A Draft MCP Phase II Comprehensive Site Assessment (CSA) was completed for this property in June 2011 that identified contaminant conditions in soil and groundwater beneath the concrete slab that appeared to be inconsistent with the previously filed 2004 RAO. In addition, the analysis of stockpiled soil generated during clearing operations and staged above the slab identified contaminant concentrations greater than applicable RCs. These soils were not previously sampled as part of the prior RAO and are located above the slab, suggesting a different exposure assumption.

The report concluded that detection of contaminant concentrations in soil (petroleum, lead and semi-volatile organic compounds (SVOCs) and metals) and groundwater (silver) above applicable RC's constituted a 120-day notification obligation to MassDEP. The City of New Bedford notified MassDEP of the additional actions required at this property in October 2011. It is currently unclear what additional MCP response actions will be taken by the City of New Bedford to address the remaining RECs at this property.

NS Blackmer Street (North DMF Property) and NE Blackmer Street (South DMF Property): A portion of these two properties (identified as 16 Blackmer Street in submissions to MassDEP) was identified as a MassDEP disposal site identified by RTN 4-15490. One or both of these two properties has a recorded MCP AUL (a deed restriction) that was implemented in 2006 due to the presence of lead, petroleum hydrocarbons and PAHs in soil. The source of these constituents in soil was attributed to historic fill materials present on this property. The AUL includes property use restrictions and obligations that should be reviewed and followed prior to property development. The AUL requires maintenance of an existing asphalt cap or replacement with either: a 3" concrete cap, a building, or three feet of clean soil at these properties.

46 92 Harbor Street (Hathaway Mills Parcel): Several areas of contamination were outlined within a May 2001 Response Action Outcome (RAO) statement. The primary constituent of concern was petroleum hydrocarbons and PAHs in soil; however, lead was also detected in groundwater in at least one sample collected from a monitoring well. Petroleum hydrocarbon impacts to soil were likely associated with a 100,000 gallon Underground Storage Tank, which was abandoned in-place. PAHs in soil were attributable to coal ash (which is exempt under the MCP). Lead in groundwater was reported to be associated with poor sampling techniques, as re-sampling of the well did not show the presence of the compounds.

5.0 SITE RECONNAISSANCE AND FINDINGS

5.1 Methodology and Limiting Conditions

Apex representative, George DiCesare, performed a site inspection at the Subject Properties on September 23, 2011. Weather conditions at the time of the inspection were clear and calm with a temperature of 70 degrees Fahrenheit. The following findings are based on observations during the site inspection. Site photographs are provided in **Appendix I**.

5.2 Site Setting and Observations

The Subject Property is composed of eight properties totaling approximately 34.82 acres. The Subject Properties are located on the eastern side of New Bedford Harbor in a waterfront district zoned industrial.

5.3 Off-Site Activities

Apex did not visually observe any uses or activities at adjoining or surrounding properties that are considered to be a REC with regard to the Subject Property during the site reconnaissance.

5.4 Storage Tanks

Apex did not observe any visual indications of USTs or ASTs during the site inspection, nor did EDR did indicate the Subject Properties as being on the State and tribal registered storage tank lists, refer to **Table 3 and Appendices B and C**. There were no current records of tanks on the Subject Property at the New Bedford Fire Prevention office.

5.5 Hazardous Substances and Petroleum Products

Apex did not observe any visual indications of hazardous substance or petroleum product storage or use on the Subject Properties. The EDR Report did not indicate current hazardous substance and/or petroleum product usage on the Subject Properties.

5.6 Solid Waste

Apex visually inspected the Subject Properties for the presence of any solid waste, there was no evidence of any solid waste.

5.7 Polychlorinated Biphenyls (PCBs)

Apex visually inspected the Subject Properties for the presence of electrical equipment that could potentially contain PCBs, an environmentally-regulated material used in the dielectric fluid in some electrical equipment. Although occupied spaces may contain lighting and electrical equipment containing transformers or light ballasts, it is unknown whether PCB containing electrical equipment exists without further interior survey and environmental assessment of each individual space or piece of equipment. No exterior transformers were observed to be on the Subject Properties.

5.8 Drains and Sumps

No drains and sumps were observed at the Subject Properties or identified in current information reviewed for the Subject Properties. The Subject Properties that are vacant with the exception of 4 Wright Street, only contain storm water drains. The information obtained from EDR and the city offices indicate there are some storm water basins located on or adjacent to all Subject Properties. There are no structures on the Subject Properties except 4 Wright Street that would contain drains or sumps. No sumps or drains were observed at 4 Wright Street. The drainage flow was observed to flow east toward the ocean at the rear of the 4 Wright Street property while the side and front parking areas drain toward a wetland area to the south and Wright Street to the north.

5.9 Wastewater and Septic Systems

During the site reconnaissance on September 23, 2011, Apex observed the Subject Properties to be vacant land or currently used as boat ramp or boat storage with the exception of 4 Wright Street that has current industrial operations. Historical information indicates the Subject Properties have been industrially developed or have always been vacant land and/or used as a boat ramp and storage and there was no historical documentation indicating wastewater and septic systems were currently or historically present at the Subject Properties.

5.10 Wells

During the site reconnaissance, Apex observed monitoring wells on the following properties at the Subject Properties:

- Shuster Vacant Lot (31 288) – 7 monitoring wells were observed to be intact;
- 4 Wright Street (Shuster Corporation) (31 263) - 1 monitoring well was observed to be intact at the rear parking lot; and
- 45 Cove Street (Former Dartmouth Finishing Site) (21 45) – Several monitoring wells were observed to be in place at 45 Cove Street, the Former Dartmouth Finishing Site. The monitoring wells were located throughout the whole site.

5.11 Other Physical Evidence of Contamination

Physical evidence of contamination was noted during the site reconnaissance on the following properties at the Subject Properties:

- Shuster Vacant Lot (31 288) – Evidence of roofing material and ash piles were observed in centrally located areas of the site. A stressed vegetation area was noted in the suspected location of the former gas holder. A subsurface investigation was conducted on this parcel by Apex during the Spring and Summer of 2011, a summary of which is included in **Section 7.0**;
- 46 92 Harbor Street (Hathaway Mills Parcel) (21 30) – Debris piles containing boulders, concrete and ash like material was observed on the northeast portion of the site; and.
- 45 Cove Street (Former Dartmouth Finishing Site) (21 45)- An MCP Phase II Comprehensive Site Assessment (CSA) was completed for the 45 Cove Street property in June 2011 that identified contaminant conditions in the stockpiled soil at concentrations greater than applicable RCs. A copy of the report is included in **Appendix J**. The report concluded that detection of contaminant concentrations in soil (petroleum, lead and semi-volatile organic compounds (SVOCs) and metals) and groundwater (silver) above applicable RC's constituted a 120-day notification obligation to MassDEP. Additional MCP response actions, including notification to MassDEP, are required for this property. A debris pile containing boulders, concrete and ash like material was observed on the site

6.0 INTERVIEWS

Apex interviewed New Bedford municipal officials regarding the Subject Properties. Information obtained at the municipal offices is summarized in the above sections. Historic property ownership over time has not been able to be well established based on available information; however, the data that was available is summarized in **Table 1**.

6.1 Local and State File Review

Apex spoke to the Massachusetts DEP and visited City of New Bedford municipal offices regarding the Subject Properties and surrounding properties concerning potential environmental concern(s). A local file review log is included as Appendix Q of this report.

7.0 SUBSURFACE INVESTIGATION

As a result of USEPA requests for an upland environmental investigation associated with permitting for the New Bedford Marine Commerce Terminal, Apex Companies, LLC, at the behest of MassCEC, conducted a limited subsurface investigation on the following properties during the spring and summer of 2011:

1. 4 Wright Street (Shuster Corporation);
2. R E S S Front Street (Shuster Vacant Lot);
3. NS Blackmer Street (North DMF Property);
4. NE Blackmer Street (South DMF Property);
5. The northern portion of: SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp);

The investigation was broad-based in nature (the investigation did not cover the entire area of every property) and was more intense in certain areas than other areas. The investigation has provided additional insight into the environmental condition of these properties. The investigation consisted of a geophysical investigation, followed by several rounds of test pits, installation of borings and monitoring wells, and one round of groundwater sampling, outlined in more detail below.

7.1 Upland Geophysical Investigation

A geophysical investigation is a non-intrusive means of quickly gathering subsurface information, over a large area, on subsurface anomalies/structures that may contain and or be indicative of contamination, including asbestos-covered piping and other building debris possibly containing asbestos that may not be located within the former building footprint or other targeted locations for investigation as well as remnants of buried tanks and fill areas containing potentially unsuitable materials.

A geophysical investigation was performed on the properties. The geophysical survey was conducted on the entire property using Time Domain Electromagnetics (TDEM) followed by Ground Penetrating Radar (GPR). GPR was used in conjunction with TDEM data to better

characterize electromagnetic anomalies. The purpose of the investigation was to provide information on the character and conditions of the subsurface within the boundaries of the proposed project.

The investigation was intended to aid in determining whether any infrastructure which may have serviced the mill remains below the ground surface. **Figure 4** shows an approximate overlay of the existing property with the outline of the Former Potomska Mills, based on historic records, that was utilized in the geophysical and subsurface investigation. Geophysical methods may reveal the presence of underground storage tanks, metallic pipelines, and extent of buried debris, foundations, and voids. As previous investigations at the site had identified bulk Asbestos Containing Material (ACM – See **Appendix J**), which could be associated with building demolition debris, it was anticipated that buried debris would be the likeliest location for the presence of any additional ACM onsite. The geophysical survey information was used with complementary geotechnical data in characterizing the subsurface site conditions.

A summary report of the Geophysical Investigation is attached as **Appendix K**.

7.2 Upland Sampling and Assessment

Nineteen (19) test pits and eight (8) soil borings, finished as monitoring wells, were completed during an initial investigation at the properties. A second round of investigation included the advancement of thirty-eight (38) test pits. A third round of investigation included the advancement of fifteen (15) test pits. Laboratory testing results for soil samples collected during this initial phase of work identified varying levels of contamination. Polycyclic Aromatic Hydrocarbons (PAHs), PCBs, Total Petroleum Hydrocarbons (TPH), Extractable Petroleum Hydrocarbons (EPH; C11-C22 Aromatics carbon fraction) and lead were detected at one or more locations at concentrations above their respective Massachusetts Contingency Plan (MCP) Reportable Concentrations (RCs) for Soil Category S-2.

In particular, elevated levels of heavier-end PAHs and TPH were detected in a soil sample collected from Test Pit 6 (TP-6), a potential location for what may have been a former gas holder at the historic Potomska Mills complex (identified from historic fire insurance maps and the results of the geophysics investigations), which used to operate within the upland areas. In addition, an elevated concentration of EPH C11-C22 Aromatic carbon fraction was detected in a duplicate soil sample from TP-6. The Relative Percent Difference (RPD) between the duplicate sample and the soil sample it was split from was very high, reflecting the heterogeneity of the sample.

Elevated levels of PCBs (Aroclor 1254) were also detected in TP-4 and TP-2, and to a lesser extent at TP-3, TP-9, TP13 and TP17. Samples were collected from shallow fill materials (upper five feet). Except for TP-13 and TP-17, debris, likely remnants of the former Potomska Mills complex, which was historically present on the upland properties, were observed in the test pits where elevated constituents were detected. The elevated lead concentration was detected in a sample collected from a coal ash layer in TP-5.

The PCB type detected in soil at the Site during initial field activities was identified by the laboratory as Aroclor 1254; however, the laboratory noted on multiple samples that a mixture of PCBs was present, and that identification of Aroclor 1254 was often a simplification of the results. Additional analyses of samples collected during subsequent investigations indicated the presence of Aroclors 1260 and 1016/1242 (the investigations are discussed in more detail below). The elevated PCB concentrations were detected in shallow samples collected in the upper five feet of fill materials with the highest levels being detected in fill materials containing brick that may be remnants of former Potomska Mill buildings.

The site history suggests that the PCBs predate 1978, when TSCA was promulgated. PCBs have been detected below existing grade and are associated with areas where building debris, likely remnants of the former Potomska Mill buildings, are present. **Figure 4** shows an approximate overlay of the existing property with the outline of the Former Potomska Mills, based on historic records, that was utilized in the geophysical and subsurface investigation. Historical information indicates that most of the upland area has been vacant, with no industrial activities, since the demolition of the former Mill complex in the 1930's and 1940's. Also, the observed distribution (typically below grade) and distribution across the Site is not suggestive of dumping.

Elevated concentrations of petroleum-related constituents were detected in samples that exhibited a creosote-like odor. These samples also exhibited heavier-end PAHs which may be indicative of a heavier fuel consistent with the fuels contained in gas holders. Bulk asbestos was not observed in test pits or borings advanced to date.

Test pits, soil borings and monitoring well locations, are shown on figures attached within **Appendix L**. The laboratory testing program and testing results for soil and groundwater samples are summarized on Tables included within **Appendix M**. Test pit logs and soil boring/monitoring well logs are included in **Appendix N and Appendix O**. Laboratory reports are included in **Appendix P**. The laboratory data was compared to the applicable MCP reporting criteria (MCP Reportable Concentrations for Soil Category S-2 and Groundwater Category GW-2), and to the more conservative MCP Method 1 Standards (GW-3/S-1 and GW-3).

7.2.1 FIELD PROGRAM

Test Pit, Soil Borings and Monitoring Well Installations

As previously mentioned, during the initial investigative activities, 19 test pits (TP-1A through TP-17) were excavated between April 25, 2011 and April 27, 2011. The initial phase also included eight (8) soil borings completed as monitoring wells that were advanced between May 2, 2011 and May 13, 2011. Thirteen additional borings were completed for geotechnical purposes. Additional investigative activities included the advancement of 38 test pits that were excavated between July 18, 2011 and July 25, 2011. The 38 test pit excavations were advanced in the areas of TP-1, TP-2, TP-3, TP-4, TP-6, TP-9, TP-13 and TP-17. A final round of 15 test pits was advanced on August 11, 2011. These test pits were advanced in the

area of TP-4, TP-2 and TP-6. The second and third round of test pits were performed to confirm prior observations and to delineate the extent of PCB, PAH and/or TPH/EPH impacts in fill materials in these areas. Test pit logs and soil boring/monitoring well logs are included in **Appendix N and Appendix O**.

Test pits were advanced using a Case 590, Komatsu PC90 or a Caterpillar B315 excavator. Due to the proximity of some of the test pits to wetland resources, hay bales were used to reduce erosion and grass seed was spread and covered with hay to promote re-growth of grass. Soil borings were advanced using a drill rig mounted on an all-terrain vehicle using drive-and-wash drilling methods. Two-inch PVC monitoring wells were set to span the water table observed during drilling. Monitoring wells were located immediately adjacent to (on the downgradient side) of test pits where evidence of potential contamination was observed during the test pit program. Each monitoring well was secured by locking steel casing set in a concrete pad. Test pits and soil boring/monitoring well installations were monitored by an Apex engineer. Test pits, soil borings and monitoring well locations are shown on a figure contained within **Appendix L**.

During the advancement of TP-1A through TP17, soil samples were collected for field screening using DEP's jar headspace screening method. The material removed from the test pits, side-walls of the test pits, and the bottom of test pits were observed for visual and olfactory evidence of contamination, and for possible materials that appeared to be Asbestos Containing Materials (ACM). Evidence of ACM was not observed at any of the test pit locations. Soil samples were screened for total VOCs using a photo-ionization detector (PID). Samples exhibiting PID readings and/or visual and/or olfactory evidence of contamination were collected for laboratory analysis. If potential contamination was not observed, a sample was collected from immediately above the saturated zone or from fill materials. Each test pit was backfilled with the excavated soils in the general sequence the soils were removed. Each test pit location was recorded at the time of excavation using a handheld Global Positioning System (GPS) instrument with coordinates in NAD 83 State Plane, Massachusetts Mainland Zone.

During the advancement of the second and third round of test pits, for each series starting with a TP-1, TP-2, TP-3, TP-4, TP-6, TP-9, TP-13, TP-17 or TP-13/17 prefix (where applicable), the test pits were extended laterally and/or moved outward away from the original test pits when observations indicated similar subsurface conditions to the initial test pits and/or if evidence of contamination was observed (i.e., extended in an effort to reach a "clean" edge). Soil sample collection differed from the first round and was designed to delineate, laterally and vertically, the extent of contamination in a given area. At select test pit locations, soil samples were collected from similar depths and soils to prior samples that exhibited elevated constituent concentrations. Additionally, one near surface sample was collected from above the impacted zone and one deeper sample from below the impacted zone to assess the thickness and vertical extent of contamination. PID field screening, backfilling, and GPS location determinations were consistent with methods used during advancement of the initial test pits.

Soil and Groundwater Sampling and Analyses

Tables within **Appendix M** present a summary of analyses performed, per location, for soil and groundwater samples respectively.

Soil

During the initial phase of 17 test pits and 8 soil borings, soil samples were collected and analyzed for the 13 Priority Pollutant Metals (EPA Method 6020A/7471), PCB Aroclors (EPA Method 8082 With Non-Target ECD Peaks Reported), total petroleum hydrocarbons (EPA Method 8015), and semi-volatile organic compounds (SVOCs by Method 8270C). If evidence of potential petroleum-related contamination was observed, soil samples were submitted for extractable petroleum hydrocarbons (Massachusetts Method MAEPH) and/or volatile petroleum hydrocarbons (Massachusetts Method MAVPH) including the target compounds, where applicable. If elevated headspace readings are detected then the soil sample was submitted for VOCs (EPA Method 8260). If metals analyses indicate concentrations above the “20 times rule”, TCLP analyses were performed on the detected constituent exhibiting the elevated concentration.

During the second and third round of test pits, the analyses were tailored to address contaminant impacts observed in a given area. For samples collected in the area of TP-2, TP-3, TP-4, and TP6, one sample from each test pit was analyzed for PCBs, SVOCs and EPH. For the nine test pits advanced in the area of TP-13, TP17, and TP-9, samples were collected and analyzed for PCBs. Samples were selected from similar depths and soil/fill types to prior samples that exhibited elevated constituent concentrations. In addition, one near surface sample (“A” designation on samples) was collected from above the impacted zone and one deeper sample (“B” designation on samples) from below the impacted zone was collected and analyzed for PCBs to assess the thickness and vertical extent of PCB contamination (“M” designation on samples indicated the middle sample collected).

For soil borings, soil samples were collected continuously using a two foot long split spoon sampler. Each sample was logged by an engineer and placed in a clean glass jar. Each sample was then field screened using DEP’s jar headspace method. The soil sample selection process was consistent with the approach used for the first phase of test pits. Selected samples from soil borings were submitted and analyzed for the 13 Priority Pollutant Metals (EPA Method 6020A/7471), PCB Aroclors (EPA Method 8082 With Non-Target ECD Peaks Reported), TPH (EPA Method 8015), and SVOCs (Method 8270C). If elevated PID readings and potential petroleum-related impacts to soil were observed during drilling, then soil samples were submitted for EPH (Massachusetts Method MAEPH) and/or VPH (Massachusetts Method MAVPH) including the target compounds, and VOCs (EPA Method 8260). Note that additional, non-environmental, soil borings were also advanced at the same time as the environmental investigation and that those soil boring logs are also included within **Appendix O**. Soil samples collected from the geotechnical borings were field-screened via headspace analysis with a PID and observations were made with regard to potential environmental contamination.

Groundwater

Prior to sampling each monitoring well, the well was developed and allowed to reach equilibrium with the surrounding aquifer before sampling. During well development and groundwater sampling, personnel monitored groundwater parameters including turbidity, pH, conductivity and temperature. Each well was allowed to equilibrate for at least one week prior to sampling. Prior to sampling, the depth to groundwater was recorded. Monitoring wells were sampled using low-flow sampling to minimize turbidity in the samples.

Depending on the contaminants of concern that were indentified during the initial test pits, soil sampling and testing program, monitoring wells were sampled and analyzed for PCB Aroclors (EPA Method 8082 With Non-Target ECD Peaks Reported), 13 Priority Pollutant Metals (EPA Method 6020A/7471), SVOCs (EPA Method 8270C), and Total Petroleum Hydrocarbons (EPA Method 8015). Select groundwater samples, collected at locations adjacent to test pits where elevated PID readings were recorded, were also analyzed for VOCs (via EPA Method 8260).

Sampling Quality Control

Quality Assurance/Quality Control (QA/QC) duplicate samples were collected at the rate of up to one duplicate for every ten samples per sample matrix. Samples were collected and labeled in such a manner as to make them easily associated with the primary samples.

7.2.2 LABORATORY TESTING RESULTS

Soil Testing Results

Laboratory testing for soil samples are summarized on tables located within **Appendix M**. Testing results are compared to the MCP Reportable Concentrations (RCs) for soil category S-2, MCP risk-based standards for categories S-1/GW-3 (most stringent and included for comparison purposes only), S-3/GW-3 (standards considered applicable for Site after development), and MCP Upper Concentration Limits (UCLs).

PCBs: One hundred fourteen soil samples, collected from test pits and soil borings, were analyzed for PCBs. PCBs were detected in 77 of the 114 samples. Detected PCB concentrations ranged from 0.0059 mg/kg (or ppm) in the sample collected at TP-1 to 989 mg/kg in the middle sample collected from TP4-1-W-M (approximately 3.8 to 4.8 feet). PCBs were detected at concentrations greater than 50 mg/kg in six samples including TP-2 (75 mg/kg; 0 to 3.7 feet), TP-4 (610 mg/kg; 0.5 to 1.2 feet), TP4-W-1 (641 mg/kg; 0 to 3.8 feet), TP4-2W (480 mg/kg; 0.4 to 2.5 feet), and TP4-1NW-A (100 mg/kg; 0 to 1.3 feet). The majority of PCB concentrations were less than 10 mg/kg. Detected PCB concentrations at several locations exceed the MCP RCS-2 criteria of 3 mg/kg and several detections exceeded MCP Method 1 risk-based standards for Soil Categories S-1 and S-3/Groundwater Category GW-3 (S-1/GW-3 and S-3/GW-3). The detections greater than 100 mg/kg exceed the MCP UCL of 100 mg/kg. The higher detections at TP-2, TP-4, TP4-W, TP4-2W, and TP4-1NW-A would be considered a PCB-remediation waste under TSCA (greater than 50 mg/kg). At each location, the vertical extent of PCBs was delineated.

TPH: Twenty-six soil samples were analyzed for TPH. TPH was detected in 19 of 26 samples. Detected TPH concentrations ranged from 45.4 mg/kg at TP-13 (1.2 to 4 feet) to 5,900 mg/kg at TP-6 (3 to 4 feet). The sample from TP-6 displayed a creosote-like odor. The next highest concentration was 2,180 mg/kg at TP-2 (0 to 3.7 feet). The TPH concentration detected at TP-6 exceeds the MCP RCS-2 reporting criteria (3,000 mg/kg) and the concentrations detected at TP-2 and TP-6 exceed the most stringent MCP risk-based for S-1/GW-3 (1,000 mg/kg) standard and at TP-6 the S-3/GW-3 (5,000 mg/kg) standard.

EPH: Fifty-four soil samples were analyzed for EPH. EPH was detected in 45 of 54 samples. Detected EPH compounds include several ranges of carbon fractions (C9-C18 Aliphatics, C19-C36 Aliphatics, and C11-C22 Aromatics). Adjusted C11-C22 Aromatics ranged from 7.22 mg/kg at TP-7-NW-B to 17,800 mg/kg at TP-6-1-N-H. The C11-C22 Aromatics concentration detected at TP-6-1-N-H exceeds the MCP RCS-2 reporting criteria (3,000 mg/kg) as well the MCP Upper Concentration Limit (UCL) (10,000 mg/kg), which is a level of contamination which may pose a significant risk of harm to public welfare and the environment in the future.

VPH: Five soil samples were analyzed for VPH. VPH was detected in five samples. VPH carbon fraction C9-C12 Aliphatics and C9-C10 Aromatics were detected at concentrations below applicable reporting criteria and Method 1 standards. Samples were selected for VPH based on elevated PID readings and observed creosote and/or petroleum-like odors.

VOCs: Sixteen soil samples were analyzed for VOCs. VOCs were detected in 10 of 16 samples. With the exception of tetracholorethene being detected at a low level just above the method reporting limit, several petroleum-related VOCs were detected at low concentrations below their applicable MCP reporting criteria and MCP Method 1 risk-based standards.

SVOCs: Seventy-two soil samples were analyzed for SVOCs. SVOCs were detected in 58 of 72 samples. Several SVOCs that are referred to as PAHs were detected in fill materials at the Site. Heavier end PAHs, (e.g., benzo(a)anthracene, benzo(a)pyrene, and benzo(b)fluoranthene) and two petroleum-related SVOCs (naphthalene and 2-methylenaphthalene) were detected at elevated levels primarily in the area of TP-6 where creosote-like odors were observed in the fill materials and at TP-2 where building debris and asphaltic like materials were observed. Several detected SVOCs, primarily in the areas of TP-6 and TP-2, exceeded MCP RCS-2 reporting criteria and MCP Method 1 risk-based standards.

13 Priority Pollutant Metals: Nineteen soil samples were analyzed for the 13 Priority Pollutant Metals. With the exception of TP5 and TP17 where lead was detected at 580 mg/kg (1.2 to 2 feet) and 561 mg/kg (2 to 4 feet), respectively, detected metals concentrations were low and below their applicable MCP regulatory standards. The lead detects in TP5 and TP17 exceed the MCP RCS-2 and MCP Method 1 standard of 300 mg/kg. The TP5 and TP17 samples were collected from a layer containing coal and ash, and as such, are exempt from the MCP reporting requirements per the notification exemption contained in Section 40.0317(9) of the MCP. TCLP testing was performed on five soil samples where lead was detected above 100 mg/kg which exceeds the “20 times rule”. TCLP analyses results were non-detect in three samples and 0.56 mg/l (ppm) in TP2 and 18 mg/l in TP5 which is above the TCLP

limit of 5 mg/l indicating the potential for lead to leach into groundwater. However, lead was not detected in the groundwater sample collected from MW-7, which is located downgradient of TP5.

Groundwater Testing Results

Laboratory testing for groundwater samples are summarized within tables located in **Appendix M**. Testing results are compared to the MCP RCs for groundwater category GW-2, MCP risk-based standards for category GW-3 and MCP Upper Concentration Limits (UCLs).

PCBs: Eight groundwater samples were analyzed for PCBs. PCBs were not detected in any of the groundwater samples. Monitoring wells are located immediately downgradient of areas where PCBs have been detected at elevated levels in soil.

TPH: Eight groundwater samples were analyzed for TPH. TPH was detected in one of nine monitoring wells sampled. TPH was reported at a concentration of 3,350 ug/l (ppb or 3.35 ppm) in MW-6, which is below its applicable MCP criteria and standard.

EPH: Two groundwater samples were collected and analyzed for EPH. The two monitoring wells MW-7 and MW-8 are located immediately downgradient of areas where evidence of petroleum-related contamination was observed in soil. One EPH carbon fraction, C11-C22 Aromatics was detected at concentrations of 2,710 ug/l and 140 ug/l which are below the applicable MCP criteria and standard.

VPH: Two groundwater samples were collected and analyzed for VPH. The two monitoring wells MW-7 and MW-8 are located immediately downgradient of areas where evidence of petroleum-related contamination was observed in soil. One VPH carbon fraction, C9-C10 Aromatics, was reported at a concentration of 3,730 ug/l, which is below its applicable MCP criteria and standard.

VOCs: Eight groundwater samples were collected and analyzed for VOCs. VOCs were detected in two (MW-7 and MW-8) of eight monitoring wells sampled. Monitoring wells MW-7 and MW-8 are located immediately downgradient of areas where evidence of petroleum-related contamination was observed in soil. One VOC, naphthalene, exceeded its MCP RCGW-2 criteria in monitoring well MW-7 (3,900 ug/l versus 1,000 ug/l), but was below its applicable MCP Method 1 GW-3 standard.

SVOCs: Eight groundwater samples were collected and analyzed for SVOCs. SVOCs were detected in two (MW-7 and MW-8) of eight monitoring wells sampled. Monitoring wells MW-7 and MW-8 are located immediately downgradient of areas where evidence of petroleum-related contamination was observed in soil. The detected SVOCs were reported at concentrations below their applicable MCP criteria and standards.

13 Priority Pollutant Metals: Eight groundwater samples were collected and analyzed for the 13 Priority Pollutant metals. Various metals were detected in the Site monitoring wells at low concentrations below their applicable MCP criteria and standards.

7.2.3 SUMMARY

A limited subsurface investigation, consisting of geophysics, test pits, borings, and groundwater sample collection was conducted during the spring and summer of 2011 on several properties included in this Phase I ESA:

1. 4 Wright Street (Shuster Corporation);
2. R ES S Front Street (Shuster Vacant Lot);
3. NS Blackmer Street (North DMF Property);
4. NE Blackmer Street (South DMF Property);
5. The northern portion of: SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp);

The locations of the test pits are indicated on a figure contained within **Appendix L**; also on that figure is an outline of the three areas to be addressed via excavation and off-site disposal of soil. Tables summarizing soil and groundwater data collected and to date are attached within **Appendix M**. Soil boring and groundwater monitoring well borings, as well as test pit logs are attached within **Appendix N and Appendix O**. The analytical data for soil and groundwater sample results is also attached within **Appendix P**.

The following is a summary of the results of the subsurface investigation:

- The Site is generally characterized by approximately 3 to 4 feet of granular fill containing anthropogenic materials that appear to be related to the former Mill complex, underlain by sand with varying amounts of silt and/or a brown to black 0.5 to 1-foot fibrous peat layer, overlying silty sands overlying bedrock.
- Anthropogenic materials included brick, an approximate 2 to 3-foot ash and clinker layer (generally occurred 1 to 3 feet below existing grade), and remnants of stone foundations.
- Based on the environmental data, PCBs are prevalent across R ES S Front Street (Shuster Vacant Lot) and are also prevalent in some locations at NS Blackmer Street (North DMF Property).
- PCBs were typically observed in fill materials containing ash and brick debris. PCB concentrations are highest in the areas of TP-2 and TP-4 and decrease markedly away from this area.
- Petroleum-related impacts, apparently attributable to a former gas holder, are prevalent in the area of TP-6, slightly north of where the former gas holder was anticipated based on historic plans.
- Petroleum-related impacts to groundwater were detected within a monitoring well located downgradient from the existing building at 4 Wright Street (Shuster Corporation). These concentrations did not exceed the 310 CMR 40.0000 reporting criteria; however, they may indicate a potential release upgradient (potentially at the building itself).

- Naphthalene was detected in groundwater at MW-7 on the Vacant Shuster Lot above its GW-2 criteria; petroleum hydrocarbons were also detected in this location (but below their respective MCP reporting criteria).
- Elevated levels of heavier-end PAHs were observed at various locations across the Site in samples collected from the ash layer and/or from the petroleum impacted soil that displayed a creosote-like odor.

Reporting Conditions as of August 2011:

The following reporting requirements under 310 CMR 40.0000 (The Massachusetts Contingency Plan) were applicable as of August 2011, when they were presented to MassCEC in writing. It is currently unclear from online MassDEP information if official notification to MassDEP by the Owners/Operators of the respective properties has occurred as of the date of this report:

NS Blackmer Street (North DMF Property)

PCBs were detected at 6.4 and 6.2 mg/kg at TP-13 and TP-17 on the North DMF Property, exceeding the MCP RCS-2 criteria (3 mg/kg). The exceedances on the DMF property represent a new reporting condition. Although this property is referred to within this report as the “DMF Property”, it is currently unclear what agency of the Commonwealth of Massachusetts would qualify as the “Owner” or “Operator” of the properties; however, the Massachusetts Contingency Plan states that the Owner or Operator of a property has an obligation to notify MassDEP of the release conditions within 120 days of obtaining knowledge of the release. Once notification is made of the release condition, a MassDEP Release Tracking Number (RTN) would be issued and the properties would need to be addressed under the provisions of the MCP. It is unclear if this has occurred as of the date of this report.

R ES S Front Street (Shuster Vacant Lot)

PCBs, PAHs, TPH, and EPH were detected in soil/fill samples at several locations and one VOC (naphthalene) was detected in groundwater on the Shuster Vacant Lot at concentrations that exceed their MCP RCS-2 and RCGW-2 standards. The detection of these constituents represents a 120-day reporting condition under Section 40.0315(1) of the MCP. The Owner or Operator of this property similarly has an obligation to notify MassDEP of the release conditions within 120 days of obtaining knowledge of the release.

The detection of PCBs at concentrations greater than 50 mg/kg on the Shuster Vacant Lot, regardless of the contamination occurring prior to 1978, means these materials would be regulated as a PCB-remediation waste under 40 CFR 761 (TSCA). TSCA authority has not been delegated to any of the states, so both EPA and State (MCP) regulations apply to the PCBs detected in soil on the Shuster Vacant Lot.

Potential Imminent Hazard (Shuster Vacant Lot)

Due to the elevated levels of PCBs detected in near surface soil/fill on the Shuster Vacant Lot, in August 2011 Apex evaluated whether an Imminent Hazard (IH) Condition under the Massachusetts Contingency Plan exists at the Site. At that time, it was Apex's opinion that Site conditions did not currently meet the definition of an IH Condition presented in Section 40.0321 of the MCP. However it was Apex's understanding that trespassers had periodically set tents on the Shuster Vacant Lot. Because of the documented contamination, lack of sanitary facilities on the property, and assumed city ordinances/laws that prohibit this type of activity, Apex recommended that any trespassers be removed and the property be secured to prevent against potential risks to human health, safety and welfare, in order to prevent a future IH Condition.

It is Apex's understanding that the trespassers were evicted as of August 2011, removing the Potential Imminent Hazard condition. It is also Apex's understanding that MassCEC officially notified the owner of the Shuster Vacant Lot of the reporting requirements in September of 2011. It is not clear from online MassDEP sources, whether the owner of the Shuster Vacant Lot has reported the release to MassDEP.

8.0 DATA GAPS

No significant data gaps, defined in ASTM E 1527-05 as data gaps that affect the ability of the Environmental Professional to identify RECs, were identified in the research performed as part of this assessment.

9.0 CONCLUSIONS AND OPINIONS

Apex Companies, LLC has performed a Phase I ESA of eight properties in New Bedford, Massachusetts that together are referred to as the Subject Properties. The Phase I ESA was performed in conformance with the scope and limitations of ASTM Practice E1527-05. Any exceptions to, or deletions from, from this practice are described in Section 1.0 of this report.

The eight properties, collectively referred to as the "Subject Properties," are located on the western side of New Bedford Harbor along the waterfront in an area zoned industrial. The Subject Properties and their corresponding City of New Bedford Parcel identifications include the following.

9. 4 Wright Street (Shuster Corporation) (31 263) – Privately Owned;
10. R E S S Front Street (Shuster Vacant Lot) (31 288) – Privately Owned;
11. NS Blackmer Street (North DMF Property) (25A 53) – Owned by the Commonwealth of Massachusetts;
12. NE Blackmer Street (South DMF Property) (25A 49) – Owned by the Commonwealth of Massachusetts;
13. SE Blackmer Street (Coastal Area East of Blackmer Street and Gifford Street Boat Ramp) (25A 48) – Owned by the New Bedford Redevelopment Authority);
14. NS Gifford Street (City of New Bedford Gifford Street Parcel) (25A 7) – Owned by the City of New Bedford;

15. 46 92 Harbor Street (Hathaway Mills Parcel) (21 30) – Privately Owned; and
16. 45 Cove Street (Former Dartmouth Finishing Site) (21 45) – Owned by the City of New Bedford.

The locations of the Subject Properties are shown on **Figure 2**. According to the New Bedford Assessor's Office, the Subject Properties identified above are approximately a combined 34.82 acres.

Phase I assessment activities included a site inspection, interviews, review of historical and regulatory records, review of aerial photographs, review of historic Sanborn maps, review of historic topographic maps, a review of available information from City of New Bedford files, a review of available information from MassDEP files, a review of previous subsurface investigations conducted on certain subject properties, and review of reports of previous investigations conducted onsite.

The Phase I ESA revealed evidence of Recognized Environmental Conditions (RECs) on six of the properties. The term REC means the presence, or likely presence, of any hazardous substances or petroleum products on the Subject Property under conditions that indicate an existing release, a past release, or a material threat of a release of such materials into the structures on the Subject Property or into the ground, groundwater, or surface water of the Site. The term REC is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

RECs identified on six of the Subject Properties include:

- 4 Wright Street (Shuster Corporation): Total petroleum hydrocarbons (TPH) were detected within a monitoring well on the property during the subsurface investigation conducted by Apex Companies during the spring and summer of 2011. Although the concentration of petroleum hydrocarbons was below reporting criteria, these concentrations may indicate the possibility of a release of petroleum hydrocarbons at a location up-gradient from the monitoring well (which could potentially be associated with the onsite building).
- R E S S Front Street (Vacant Shuster Lot): Historic aerials indicated the operation of a large industrial complex (Potomska Mills Complex) on this property. One historic document indicated that a "gas holder", which may have been used to store manufactured gas, was located onsite. Additionally, after the facility was demolished, a large dark spot appeared on aerial photos, indicating a pool of liquid of some type.

PCBs, polycyclic aromatic hydrocarbons (PAHs), total petroleum hydrocarbons (TPH), and extractable petroleum hydrocarbons (EPH) were detected in soil/fill samples at several locations at concentrations that exceed their MCP RCS-2 criteria, and one volatile organic compound (VOC; naphthalene) was detected in groundwater on the Shuster Vacant Lot at concentrations that exceeded its MCP RCGW-2 criteria. The detection of

these constituents represents a 120-day reporting condition under Section 40.0315(1) of the MCP. The Owner or Operator of this property has an obligation to notify MassDEP of the release conditions within 120 days of obtaining knowledge of the release. Once notification is made of the release condition, a MassDEP RTN would be issued and the property would need to be addressed under the provisions of the MCP.

In addition, the detection of PCBs at concentrations greater than 50 mg/kg on the Shuster Vacant Lot, regardless of the contamination occurring prior to 1978, means these materials would be regulated as a PCB-remediation waste under 40 CFR 761 (TSCA). TSCA authority has not been delegated to any of the states, so both EPA and State (MCP) regulations apply to the PCBs detected in soil on the Shuster Vacant Lot. A PCB Cleanup Plan and Notification are required, and subject to approval, by the United States Environmental Protection Agency (USEPA) Region 1 prior to addressing the PCBs.

Because of the elevated PCBs detected in shallow soils on the Vacant Shuster Lot, Apex evaluated whether an Imminent Hazard Evaluation (IH) condition existed at the property. Apex concluded that conditions did not currently meet the definition of an IH Condition presented in Section 40.0321 of the MCP. However, due to possible trespassers setting tents on this property, the lack of sanitary facilities, and assumed city ordinances/laws that prohibit this type of activity, Apex recommended that any trespassers be removed and the property be secured to prevent against potential risks to human health, safety and welfare, in order to prevent a future IH Condition.

It is Apex's understanding that the trespassers were evicted as of August 2011, removing the Potential Imminent Hazard condition. It is also Apex's understanding that MassCEC officially notified the owner of the Shuster Vacant Lot of the reporting requirements in September of 2011. It is not clear from online MassDEP sources, whether the owner of the Shuster Vacant Lot has reported the release to MassDEP.

- NS Blackmer Street (North DMF Property): The detection of polychlorinated biphenyls (PCBs) at concentrations above Massachusetts Contingency Plan (MCP; 310 CMR 40.000) Reportable Concentrations (RCs) for soil category S-2. PCBs were detected at 6.4 and 6.2 mg/kg (milligrams per kilogram or parts per million) at test pit locations TP-13 and TP-17, which exceeds the MCP RCS-2 criteria of 3 mg/kg. PCBs above RCs on this property represent a new MCP reporting condition. The detection of the PCBs represents a 120-day reporting condition under Section 40.0315(1) of the MCP. The Owner or Operator of this property has an obligation to notify the Massachusetts Department of Environmental Protection (MassDEP) of the release condition within 120 days of obtaining knowledge of the release. Once notification is made of the release condition, a MassDEP Release Tracking Number (RTN) would be issued and the property would need to be addressed under the provisions of the MCP. It is currently unclear if the Owner or Operator of this property has been notified of the release, and, if so, whether they have reported the release to MassDEP. A wetland area has been located in the northeast portion of this property.

- NE Blackmer Street (South DMF Property): A portion of the DMF properties was identified as a MassDEP disposal site identified by RTN 4-15490. This property has a recorded MCP Activity and Use Limitation (AUL; a deed restriction) that was implemented in 2006 due to the presence of lead, petroleum hydrocarbons and PAHs in fill materials. The source of these constituents was attributed to historic fill materials present on this property. The AUL includes property use restrictions and obligations that should be reviewed and followed prior to property development. Construction of the New Bedford Marine Commerce Terminal will alter the conditions under which the AUL was originally implemented, and will therefore require an alteration to the AUL, or the implementation of a new AUL.
- 46 92 Harbor Street (Hathaway Mills Parcel): Several areas of contamination were outlined within a May 2001 Response Action Outcome (RAO) statement. The primary constituent of concern was petroleum hydrocarbons and PAHs in soil; however, lead was also detected in groundwater in at least one sample collected from a monitoring well. Petroleum hydrocarbon impacts to soil were likely associated with a 100,000 gallon Underground Storage Tank, which was abandoned in-place. PAHs in soil were attributable to coal ash (which is exempt under the MCP). Lead in groundwater was reported to be associated with poor sampling techniques, as re-sampling of the well did not show the presence of the compounds. Although these issues may have been resolved from a regulatory point of view, the impacts to soil (and potentially groundwater) still may remain, and could therefore impact offsite soil disposal costs when working on this property. A large pile of debris is present currently on the northeast portion of this site.
- 45 Cove Street (Former Dartmouth Finishing Site): This property was identified as a MassDEP disposal site assigned RTN 4-12810. During an inspection of the property by USEPA and MassDEP representatives in 1997, 480 drums, two underground storage tanks (USTs), one aboveground storage tank (AST) and four vats were identified that required emptying of contents and removal from the property. A removal action and assessment activities were performed that resulted in a Class A2 Response Action Outcome (RAO; regulatory endpoint) being filed with MassDEP in 2004.

During a Phase I ESA completed in 2010 for the City of New Bedford by another consultant, RECs were identified at this property that led to additional MCP response actions. A MCP Phase II Comprehensive Site Assessment (CSA) was completed for this property in June 2011 that identified contaminant conditions in soil and groundwater beneath the concrete slab that appear to be inconsistent with the previously filed RAO. In addition, the analysis of stockpiled soil generated during clearing operations and staged above the slab identified contaminant concentrations greater than applicable RCs. These soils were not previously sampled as part of the prior RAO and are located above the slab, suggesting a different exposure assumption.

The report concluded that detection of contaminant concentrations in soil (petroleum, lead and semi-volatile organic compounds (SVOCs) and metals) and groundwater (silver) above applicable RC's constituted a 120-day notification obligation to MassDEP. It is Apex's understanding that the City of New Bedford has reported these additional concerns

to MassDEP; however, it is currently uncertain what (if any) implications will come from these new reporting conditions in association with the planned New Bedford Marine Commerce Terminal, including whether or not the soil piles onsite may be reused, or whether they will have to be disposed of offsite.

In addition to the above RECs, coal and/or coal ash was observed at various locations on the Subject Properties during subsurface explorations. PAHs and various metals are often associated with coal and coal ash. Should future development involve soil excavation and off-property export of soil, it should be anticipated that these materials may contain elevated levels of PAHs and possibly metals and as such would need to be disposed of at an appropriately permitted facility. We recommend preparation of a Soil Management Plan (SMP) developed by a Licensed Site Professional (LSP) prior to excavation and off-property(s) disposal of any soil or fill so that these materials are managed appropriately.

Apex also recommends that a hazardous material building survey be performed in any existing structures on the Subject Properties prior to renovations and/or demolition so that potential materials (e.g., asbestos, lead paint, mercury containing switches) are identified that may require special handling and disposal.

10.0 ENVIRONMENTAL PROFESSIONALS

10.1 Signatures of Responsible Environmental Professionals

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR Part 312, and we have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Mary Bruno, CPG
Geologist

Chet Myers, P.E., LSP

NOTES:

1. The information compiled above was collected from an Apex review of information obtained from historical maps, aerial photographs, city directories, City of New Bedford municipal offices and documents reviewed for the Site properties.
2. This table is intended to present Apex's current understanding of the Site history and is subject to change if new historical information is obtained.
3. "-" indicates owner/operator information was not available from the cited source.

TABLE 3
Summary of DEP File Information
New Bedford Marine Commerce Terminal
New Bedford, Massachusetts

| Figure 3 ID | DEP Release Location (Name and Address) | Material Released | Description of Release | Regulatory Status | Location Relative to Subject Site² |
|--------------------|--------------------------------------------------------------|-----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|-------------------------------------------------------------------|
| A | Northern Wind Seafood 14 Hassey Street New Bedford, MA | Diesel Fuel | On 1/13/1999 a 50 gallon release of diesel fuel was reported to MassDEP and Immediate Response Actions were performed. On 3/31/1999 a Completion Statement was Received for an Immediate Response Action. A Class A2 RAO was completed on 1/31/2005. The property 14 Hassey Street is located approximately 150 feet north in an assumed crossgradient location relative to 4 Wright Street. | A2 RAO 4-14460 | Crossgradient - approximately 150 to the north |
| B | Unknown 15 South Street New Bedford, MA | #2 Fuel Oil | On 5/30/2004 it was reported that 30 gallons of #2 fuel oil had been released from a tanker and an IRA was implemented. On 5/30/2004 oral approval was given to modify the IRA Plan. An A2 RAO was completed on 8/6/2004. The property 15 South Street is located crossgradient northwest approximately 200 feet from 4 Wright Street. | A2 RAO 4-18467 | Crossgradient - approximately 200 to the northwest |
| C | Lot 4 16 Blackmer Street New Bedford, MA | Lead Petroleum Hydrocarbons Polycyclic Aromatic Hydrocarbons | A Phase I/Tier Classification Report and a partial- Class B1 RAO were filed in 2006. Investigations on the property detected elevated levels of lead, petroleum hydrocarbons and polycyclic aromatic hydrocarbons in the soil. These constituents were attributed to the presence of historic urban fill that was placed along the waterfront. An AUL was submitted on 2/9/2010, which requires the maintenance of an existing asphalt cap on the site. The AUL allows for replacement of the asphalt cap with concrete or three feet of clean fill. | AUL 4-15490 | Target Property |
| D | Berkshire Hathaway 97 Cove Street New Bedford, MA | #6 Fuel Oil | Fuel oil spill that impacted soil and groundwater on 11/05/1999. A Class A-3 ROA was filed on 1/28/2003 and an AUL was filed on 10/6/2006. Property is potentially upgradient of Subject Properties. Based on the spill characteristics (#6 fuel oil), this release is not considered a significant threat to soil and groundwater quality at the Subject Properties. | AUL 4-15117 | Potentially Upgradient - approximately 300 feet to the west |
| E | Dartmouth Finishing 45 Cove Street New Bedford, MA | Hazardous Waste | An initial inspection of the Site building by the EPA, MassDEP, and a representative of the Site owner occurred on January 21, 1997. The EPA collected samples from drums to characterize the contents. 480 drums varying in size from 40 gallons to 85 gallons, one aboveground tank, four vats, and two No. 6 fuel oil underground storage tanks (USTs) were inventoried by the EPA. A removal action included pumping oil from the two USTs, removing sludge from the vats and troughs in the basement, and removing 480 drums of OHM for off-site disposal to abate the identified imminent hazard and stabilize site conditions. Contaminants in soil located beneath the concrete slab were previously evaluated in 2004 and a RAO was filed closing the entire Site parcel. A 2010 Phase I ESA identified RECs at this property. MCP Phase II CSA activities identified elevated levels of constituents in soil, groundwater and a stockpile at property which represent a new MCP reporting condition. Additional MCP response actions are required at this property and are currently being evaluated by the City of New Bedford. | A2 RAO (4-12810); New Notification Condition discovered in 2010/2011 | Target Property |

TABLE 3
Summary of DEP File Information
New Bedford Marine Commerce Terminal
 New Bedford, Massachusetts

| Figure 3 ID | DEP Release Location (Name and Address) | Material Released | Description of Release | Regulatory Status | Location Relative to Subject Site ² |
|-------------|--------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|------------------------------------------------|
| F | Alley Way of Building 21 Cove Street New Bedford, MA | Heating Oil | On 10/14/2003 200 gallons of Heating Oil was reported spilled within the alley of 45 Cove Street and 21 Cove Street. Reportedly no media impacted. Class A-1 RAO was completed on 01/28/2004 | A1 RAO/RNF 4-18076 | Adjacent / East / Downgradient |
| G | Berkshire Hathaway Mills FMR 84 Gifford Street New Bedford, MA | BENZO(A)ANTHRACENE C11 Thru C22 Aromatic Hydrocarbons Lead | An RAO was submitted on 4/28/2004. Reviewed information indicates that remedial actions were not performed because a condition of no significant risk exists and remedial actions were not necessary. In 2007 45 gallons of diesel fuel was spilled from a fuel truck. The contamination has been eliminated, this was a reportable release under MGL 21E. | B1 RAO 4-15491 | A Portion of this Site is a Target Property |
| H | FMR Berkshire Hathaway Mills CV and Gifford Street New Bedford, MA | BENZO(A)ANTHRACENE, BENZO(A)PYRENE, BENZO(B)FLUORANTHENE C11 Thru C22 Aromatic Hydrocarbons, C19 Thru C36 ALIPHATIC Hydrocarbons Chrysene, Concrete, Dibenzo(A,H)Anthracene | An RAM and a RAO were submitted to MassDEP on 7/25/2003. The RAO indicates a condition of no significant risk exists at this site. | A1 RAO 4-20913 | A Portion of this Site is a Target Property |

NOTES:

- Information provided in this table was obtained during review of files maintained by the Massachusetts Department of Environmental Protection (DEP).
- Distances shown are based on the closest distance between approximate property boundaries and not necessarily where tanks were located or releases occurred.

ACRONYMS:

GMP = Groundwater Management Permit
 AGQS = Ambient Groundwater Quality Standards
 VOCs = volatile organic compounds
 DEP = Department of Environmental Protection
 NFA = no further action
 UST = underground storage tank

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERC-NFRAP site within approximately 0.625 miles of the target property.

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2011 has revealed that there are 3 RCRA-CESQG sites within approximately 0.375 miles of the target property.

EXECUTIVE SUMMARY

Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 04/05/2011 has revealed that there is 1 ERNS site within approximately 0.125 miles of the target property.

State- and tribal - equivalent CERCLIS

SHWS: Contains information on releases of oil and hazardous materials that have been reported to DEP.

A review of the SHWS list, as provided by EDR, and dated 04/15/2011 has revealed that there are 67 SHWS sites within approximately 1.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/11/2011 has revealed that there

EXECUTIVE SUMMARY

are 3 RCRA-NonGen sites within approximately 0.375 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 3 Manufactured Gas Plants sites within approximately 1.125 miles of the target property.

Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

Evaluation Action Summary:

Evaluation date: 06/26/1998
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property Description: The property was formerly part of a mill complex demolished around 1930. The property was developed as a baseball field at an unknown time. The City and the New Bedford Redevelopment Authority acquired the property in December 2001 and sold a portion of the property. Use as a baseball field ceased. The City planned to assess the remaining portion of the property and market it for use as a boat yard. In January 2005 the City began exploring the possibility of redeveloping the property back into a baseball field.

National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Facility name: HESS CORPORATION 21504
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date form received by agency: 08/18/1980
Facility name: MORSE TOOL INC
Classification: Not a generator, verified

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D008
Waste name: LEAD

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: K069
Waste name: EMISSION CONTROL DUST/SLUDGE FROM SECONDARY LEAD SMELTING. (NOTE: THIS LISTING IS STAYED ADMINISTRATIVELY FOR SLUDGE GENERATED FROM SECONDARY ACID SCRUBBER SYSTEMS. THE STAY WILL REMAIN IN EFFECT UNTIL FURTHER ADMINISTRATIVE ACTION IS TAKEN. IF EPA TAKES FURTHER ACTION EFFECTING THIS STAY, EPA WILL PUBLISH A NOTICE OF THE ACTION IN THE FEDERAL REGISTER.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: MA01
Waste name: WASTE OIL

Waste code: MA98
Waste name: OFF SPECIFICATION USED OIL FUEL THAT IS SHIPPED USING A HW MANIFEST

Waste code: MA99
Waste name: NON-HAZARDOUS WASTE TO BE USED ONLY FOR NON-HW SHIPPED USING HW MANIFEST

Environmental Interest/Information System
 AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MA-EPICS - Massachusetts Environmental Protection Integrated Computer System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MA-EPICS - Massachusetts Environmental Protection Integrated Computer System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040
Waste name: TRICHLOROETHYLENE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

1000421653

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MA-EPICS - Massachusetts Environmental Protection Integrated Computer System

US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2011

| | Data Release Frequency: Varies |

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009
Date Data Arrived at EDR: 04/16/2009
Date Made Active in Reports: 05/11/2009
Number of Days to Update: 25

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 04/17/1995

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

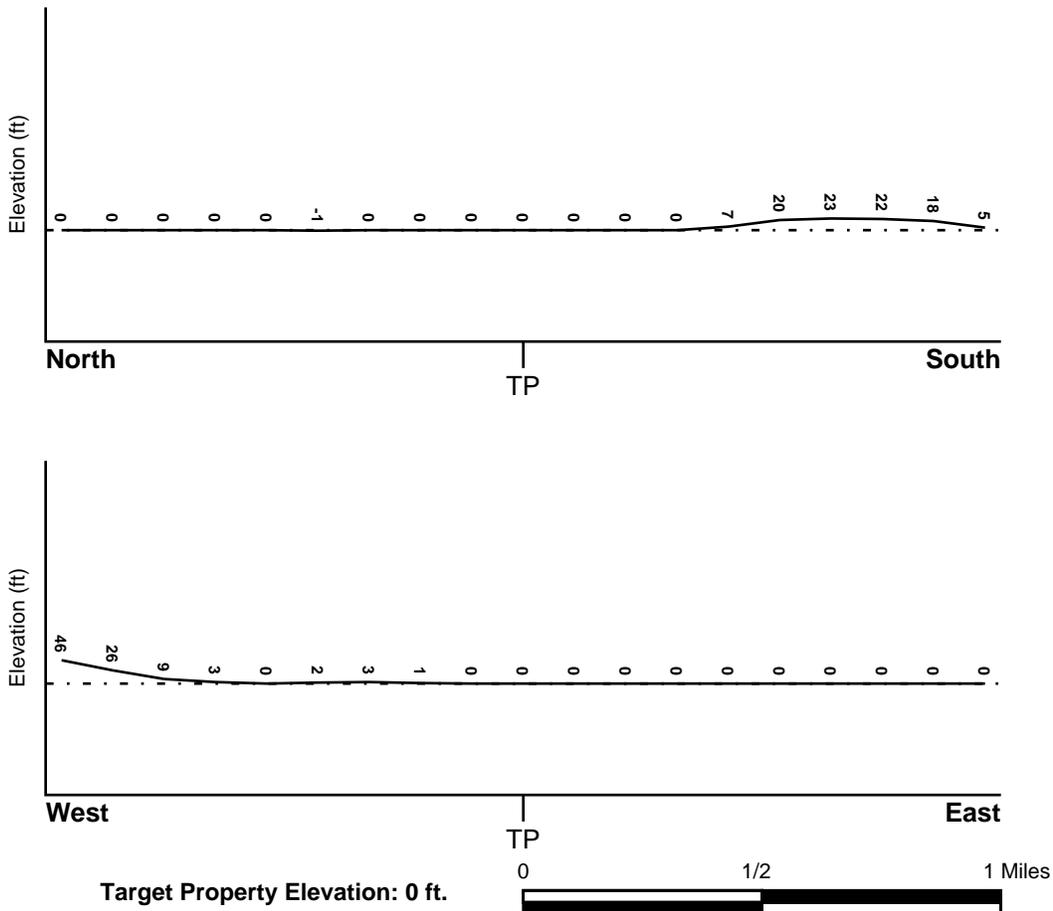

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| | |
|----------------------------------------------|----------------------------------------------------------------------------------------|
| <u>Target Property County</u> BRISTOL, MA | FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map |
| Flood Plain Panel at Target Property: | 25005C - FEMA DFIRM Flood data |
| Additional Panels in search area: | Not Reported |

NATIONAL WETLAND INVENTORY

| | |
|---------------------------------------------------------|------------------------------------------------------------------------------------------|
| <u>NWI Quad at Target Property</u> NEW BEDFORD SOUTH | NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map |
|---------------------------------------------------------|------------------------------------------------------------------------------------------|

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|-------------------------------------------|
| 4 | 1/4 - 1/2 Mile NW | VARIES |

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|------------------------|----------|-----------|--------------------|----------------|--------------|-------------------------------------------------|--------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 5 inches | variable | Not reported | Not reported | Max: 141.14 Min: 0.42 | Max: Min: |
| 2 | 5 inches | 59 inches | variable | Not reported | Not reported | Max: 141.14 Min: 0.42 | Max: Min: |

Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 4

Soil Component Name: Water

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers

Source: Executive Office of Environmental Affairs

Public Water Supply Database: The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

OTHER STATE DATABASE INFORMATION

Areas of Critical Environmental Concern Datalayer: The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers Datalayer: The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by a EPA hydrogeologist.

Aquifers Datalayer: MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas: Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature, representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

DEP Approved Zone IIs Datalayer: The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is "that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary)." These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.

- Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line.
- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.
- Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

RADON

State Database: MA Radon
Source: Department of Health
Telephone: 413-586-7525
Radon Test Results

Area Radon Information

Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 06/30/2009 has revealed that there is 1 CERCLIS site within approximately 0.625 miles of the target property.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 2 CERC-NFRAP sites within approximately 0.625 miles of the target property.

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 3 RCRA-CESQG sites within approximately 0.375 miles of the target property.

EXECUTIVE SUMMARY

Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 12/31/2009 has revealed that there are 2 ERNS sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 01/13/2010 has revealed that there are 2 RCRA-NonGen sites within approximately 0.375 miles of the target property.

| VARIAN ASSOCIATES LEXINGTON VA | 114 CONWAY ST | NW 1/8 - 1/4 (0.221 mi.) | 18 | 45 |

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 10/19/2009 has revealed that there are 2 FINDS sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 3 Manufactured Gas Plants sites within approximately 1.125 miles of the target property.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110003471804

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:

Date form received by agency: 06/03/2005
Facility name: BARRYS ROUTE 18 COLLISION
Classification: Small Quantity Generator

Date form received by agency: 01/18/2005
Facility name: BARRYS ROUTE 18 COLLISION
Classification: Not a generator, verified

Date form received by agency: 06/26/1986
Facility name: BARRYS ROUTE 18 COLLISION
Site name: ACE AUTO BODY INC
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Registry ID: 110003471172

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

the property in December 2001 and sold a portion of the property. Use as a baseball field ceased. The City planned to assess the remaining portion of the property and market it for use as a boat yard. In January 2005 the City began exploring the possibility of redeveloping the property back into a baseball field.

Date form received by agency: 10/31/1980
Facility name: SPRAGUE ENERGY CORP
Site name: SPRAGUE MASSACHUSETTS
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: MA01
Waste name: WASTE OIL

Waste code: MA98
Waste name: OFF SPECIFICATION USED OIL FUEL THAT IS SHIPPED USING A HW MANIFEST

Waste code: MA99
Waste name: NON-HAZARDOUS WASTE TO BE USED ONLY FOR NON-HW SHIPPED USING HW MANIFEST

Date form received by agency: 08/18/1980
Facility name: MORSE TOOL INC
Classification: Not a generator, verified

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D008
Waste name: LEAD

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: K069
Waste name: EMISSION CONTROL DUST/SLUDGE FROM SECONDARY LEAD SMELTING. (NOTE: THIS LISTING IS STAYED ADMINISTRATIVELY FOR SLUDGE GENERATED FROM SECONDARY ACID SCRUBBER SYSTEMS. THE STAY WILL REMAIN IN EFFECT UNTIL FURTHER ADMINISTRATIVE ACTION IS TAKEN. IF EPA TAKES FURTHER ACTION EFFECTING THIS STAY, EPA WILL PUBLISH A NOTICE OF THE ACTION IN THE FEDERAL REGISTER.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
