Hi Phil,

Thanks for all the information. This is helpful. Also, good news about blasting being off the table at this point! That gives both of us even less to analyze as far as potential effects to Atlantics. That was pretty much the only thing we had any real need for analysis on in order to concur.

I think the plan you mentioned of sending along the state's analysis along with EPA's is a good plan going forward. We are ready to go and put together our concurrence with NLAA once you guys get your analysis, etc. to us.

Thanks for keeping us in the loop!

Cheers,
Chris

Hi Phil,

Enclosed please find the updated Fish Deterrent Plan with the changes to Figure 2 as well as updated information regarding the transects for the monitoring.

This document should replace the Commonwealth's October 17, 2012 submission to EPA.

Please contact us with any additional questions.

Thanks,

Chet Myers

Chet,

Just 2 quick comments on the Fish Deterrent Plan.

1. Figure 2 should include a depiction of where the Fish Weir Nets will be placed.

2. The monitoring plan makes reference to 1200 foot transects parallel to the shoreline, with their starting points randomly selected. This selection process needs to be more completely articulated. It appears that the project area is being gridded off and random numbers assigned to each square. Transects will then occur in each randomly selected square. Thus, the squares are 1200 feet in length? More detail on this process is needed and perhaps a figure depicting the grid and a hypothetical transect line.

Phil
