TABLES

TABLE 1-1
HISTORY OF ACTIVITIES ASSOCIATED WITH RAYMARK FACILITY AND ENVIRONS
FINAL REMEDIAL INVESTIGATION REPORT – AREA I
RAYMARK - FERRY CREEK - OU3
STRATFORD, CONNECTICUT

DATE	ACTIVITY	COMPANY CONDUCTING ACTIVITY*	GENERAL FINDINGS
1992-1994	CERCLA Removal Action at the Raymark Facility to abate imminent health risks	ELI	Mitigated imminent health risks posed by site conditions.
1993	Soil Sampling	Metcalf & Eddy - CT DEP	Soil samples collected from residential properties within AOC C.
1993	Final Site Inspection Report for Raymark Industries issued	Weston (ARCS)	Included collection of sediment samples along Ferry Creek and the Housatonic River to monitor contaminant migration from the Raymark Facility. Numerous site-related organic and inorganic contaminants detected at elevated levels. Soil sampling detected site-related contaminants at the facility and nearby residential properties. Report also summarized previous sampling results (soil, sediment, groundwater).
1993	Fish and Shellfish Sampling	EPA and CT DEP	Fish/shellfish analyses from samples collected from various Stratford water bodies, including Housatonic River, Ferry Creek, Selby Pond, and other ponds. Health advisory issued to limit consumption of eels from Selby Pond.
1993-1995	Expanded Site Inspections (ESIs) and Vertical Sampling Program (VSP)	Weston (TAT/ARCS)	Surficial and subsurface soil and groundwater sampling conducted at various locations throughout Stratford identified contamination. Commercial and residential properties within the study area were investigated by Weston under TAT and ARCS, respectively.
1993-1994	Comprehensive Site Investigation (CSI) reports issued, Stratford Superfund Sites	HNUS (ARCS)	Surficial and subsurface soil investigations and sampling for lead, PCBs, and asbestos; conducted at Stratford residential properties, using a grid sampling system, to provide data necessary to proceed with the Stratford Superfund Sites Remediation Program. The properties investigated by HNUS are outside the current OU3 study area, and are therefore not discussed in this report, but data from these studies were used to help define the current OU3 study area.

TABLE 1-1
HISTORY OF ACTIVITIES ASSOCIATED WITH RAYMARK FACILITY AND ENVIRONS
FINAL REMEDIAL INVESTIGATION REPORT – AREA I
RAYMARK - FERRY CREEK - OU3
STRATFORD, CONNECTICUT

DATE	ACTIVITY	COMPANY CONDUCTING ACTIVITY*	GENERAL FINDINGS
1994-1995	Comprehensive Site Investigations (CSI), Stratford Superfund Sites, Final CSI Report issued 1995	Foster Wheeler	Surficial and subsurface soil investigations conducted at Stratford residential properties, using a grid sampling system, to provide data necessary to proceed with the Stratford Superfund Sites Remediation Program. Contamination identified.
1994	Hydrologic Runoff Analysis Report issued	ELI	Investigated surface water samples associated with drainage system network and diversion bypass around Lagoon No. 4. Contaminant discharge identified as result of drainage network, not a specific source or spill.
1994	Ground Penetrating Radar (GPR) Survey Report issued	Hager-Richter	Data obtained on depth of fill and presence of buried metal objects at three properties within the study area (Morgan Francis, Housatonic Boat Club, and Spada).
1994-1996	Removal Action and Post-Excavation Programs	Foster Wheeler	Post-excavation records for soil removal actions conducted at 46 properties document the remediation activities and indicate that the established clean-up criteria were achieved.
1995	Final RCRA Facility Investigation Report, Raymark Industries, issued	ELI	Reported results from monitoring wells and soil borings, Phase IIA and IIB groundwater sampling rounds, nature and extent of Raymark Facility contamination. Continued to exceed drinking water standards.
1995	Final Remedial Investigation Report, Raymark Facility, issued	HNUS (ARCS)	Compiled results reported by ELI and other contractors as part of RCRA Facility Investigation and CERCLA time-critical removal actions at Raymark Facility. Widespread groundwater and soil contamination at facility. Recommend additional investigations of surface water, sediment, and groundwater off site.
1997	Ecological Risk Assessment	NOAA	Addressed risks to ecological receptors posed by hazardous Raymark Facility waste materials present in Ferry Creek, portions of the Housatonic River, and associated wetlands.

TABLE 1-1
HISTORY OF ACTIVITIES ASSOCIATED WITH RAYMARK FACILITY AND ENVIRONS
FINAL REMEDIAL INVESTIGATION REPORT – AREA I
RAYMARK - FERRY CREEK - OU3
STRATFORD, CONNECTICUT

DATE	ACTIVITY	COMPANY CONDUCTING ACTIVITY*	GENERAL FINDINGS
1997	Draft Phase II and Draft Phase III Tech Memos, Selby Pond issued	HNUS	Reported nature and extent of surface water and sediment contamination in and around Selby Pond. Identified hydrologic connection between Ferry Creek and pond. Recommended consideration of remedial action to be combined with that of Ferry Creek.
1997	Final Tech Memo, Compilation of Existing Data, Raymark - Ferry Creek issued	B&RE (RAC)	Compiled existing data. Identified data gaps to be filled during Raymark - Ferry Creek RI.
1988	Draft Evaluation of Raymark Superfund Data for PRG Development	SAIC	Evaluated historical and recently collected chemistry and toxicity data for development of preliminary remediation goals for Raymark-related contaminants of concern.
1999	Evaluation of Ecological Risk to Avian and Mammalian Receptors in the Vicinity of Upper and Middle Ferry Creek	SAIC	Evaluated potential risk to avian and mammalian receptor species utilizing habitat in upper and middle Ferry Creek

Notes:

* - ELI was hired by Raymark Industries, Inc. to perform environmental investigations at the Raymark Facility. Metcalf & Eddy performed environmental sampling under contract to CT DEP. Foster Wheeler was contracted by U.S. ACOE to perform environmental investigations to support the Stratford Superfund Sites Removal Action Program. Weston was contracted by EPA to perform environmental investigations at the Raymark Facility and environs, including residential and commercial properties in Stratford, under TAT and ARCS. NOAA and their contractor performed ecological risk assessment work for EPA. HNUS/B&RE was contracted by EPA to perform environmental investigations at the Raymark Facility and environs to complete associated RI/FS activities under ARCS and RAC. Hager-Richter Geoscience, Inc. was subcontracted by HNUS to perform a GPR survey to support the RI/FS activities.

CSI - Comprehensive Site Investigation

ESI - Expanded Site Inspection

GPR - Ground Penetrating Radar

VSP - Vertical Sampling Program

TABLE 4-1
CHEMICAL CONTAMINANTS FREQUENTLY DETECTED IN OU3 STUDY AREA
FINAL REMEDIAL INVESTIGATION REPORT – AREA I
RAYMARK - FERRY CREEK - OU3
STRATFORD, CONNECTICUT

VOCs:	**SVOCs:**	**PESTICIDES:**
Aromatic Hydrocarbons	Phenolic Compounds	4,4'-DDD
Benzene	4-Methylphenol	4,4'-DDE
Ethylbenzene	2,4-Dimethyphenol	4,4'-DDT
Toluene	Phenol	alpha-Chlorodane
Xylene		gamma-Chlordane
	Phthalates	Dieldrin
Chlorinated Hydrocarbons		
	Bis(2-ethylhexyl)phthalate	**PCBs:**
Vinyl chloride	Di-n-butylphthalate	
Chorobenzene		Aroclor-1262
1,1-Dichloroethane (1,1-DCA)	Polynuclear Aromatic Hydrocarbons	Aroclor-1268
1,1-Dichloroethene (1,1-DCE)	(PAHs)	
1,2-Dichloroethene (1,2-DCE)		**METALS:**
Methylene Chloride	Acenaphthylene	
1,1,1-Trichloroethane (1,1,1-TCA)	Acenaphthene	Aluminum
Trichloroethene	Anthracene	Arsenic
	Benzo(a)anthracene	Barium
	Benzo(a)pyrene	Beryllium
Ketones	Benzo(b)fluoranthene	Cadmium
	Benzo(g,h,i) prylene	Calcium
Acetone	Benzo(k)fluoranthene	Chromium
2-Butanone (MEK)	Chrysene	Cobalt
4-Methyl-2-pentanone	Dibenz(a,h)anthracene	Copper
	Dibenzofuran	Iron
Other	Fluoranthene	Lead
	Fluorene	Magnesium
Carbon Disulfide	Indeno(1,2,3-cd)pyrene	Manganese
	2-Methylnaphthalene	Mercury
	Naphthalene	Nickel
	Phenanthrene	Potassium
	Pyrene	Silver
		Sodium
	Other	Vanadium
		Zinc
	Carbazole	
		ASBESTOS:
		Chrysotile
		DIOXINS AND FURANS:
		2,3,7,8-TCDD toxic equivalents (TEQ)

Zinc	4/4	134	mg/kg

Notes:

(1) The locations and numbers or background samples collected were determined in concurrence with EPA. The frequency of detection denotes the number of times the compound/analyte was detected per the total number of samples that were analyzed.

(2) The average background concentrations were calculated as the arithmetic average of the detected concentrations and ½ the detection limits for those compounds/analytes reported as undetected. The detection limits used in the calculation are the sample specific detection limits reported by the laboratory. These detection limits are based on the EPA CLP contract required quantitation limits (CRQLs) for organics, and contract required detection limits (CRDLs) for inorganics, and incorporate any associated sample dilution or solids content factors.

Notes:

(1) The locations and numbers or background samples collected were determined in concurrence with EPA. The frequency of detection denotes the number of times the compound/analyte was detected per the total number of samples that were analyzed.

TABLE 4-4
SUMMARY OF BACKGROUND CONCENTRATIONS IN SURFACE WATER
FINAL REMEDIAL INVESTIGATION REPORT – AREA I
RAYMARK - FERRY CREEK - OU3
STRATFORD, CONNECTICUT

(2) The average background concentrations were calculated as the arithmetic average of the detected concentrations and ½ the detection limits for those compounds/analytes reported as undetected. The detection limits used in the calculation are the sample specific detection limits reported by the laboratory. These detection limits are based on the EPA CLP contract required quantitation limits (CRQLs) for organics, and contract required detection limits (CRDLs) for inorganics, and incorporate any associated sample dilution or solids content factors.
