

Appendix B. 2004 List of Water bodies Not Meeting Water Quality Standards. Water body Segment ID follows the numbering system in *Gazetteer of Drainage Areas of Connecticut*. Water body segment sizes vary by segment type; rivers, streams, and creeks are measured as linear miles, lakes and ponds are measured in acres, and estuaries are measured in square miles. Use support categories for each designated use are classified as P (Partially supporting), or N (Not supporting) using procedures outlined in *Connecticut Consolidated Assessment and Listing Methodology for 305 (b) and 303 (d) Reporting*. Causes are listed based on the weight of evidence approach and best professional judgement. If the cause is unknown, potential causes are listed in paranthesis under the cause. Potential Sources were listed in relation to their occurrence near the impaired water body segment and may or may not be contributing to the impairment. The sources do not correlate with the designated use impairments or causes. Waterbody segments identified as Tiers 2 and 3 constitute Connecticut's official submission pursuant to Section 303(d) of the federal Clean Water Act.
