

REGULATION 6.20 Standard of Performance for Existing Bulk Gasoline Plants

Air Pollution Control District of Jefferson County Jefferson County, Kentucky

Relates To: KRS Chapter 77 Air Pollution Control

Pursuant To: KRS Chapter 77 Air Pollution Control

Necessity And Function: KRS 77.180 provides that the Air Pollution Control Board may make and enforce all needful orders, rules, and regulations necessary or proper to accomplish the purposes of KRS Chapter 77. This regulation provides for the control of emissions from existing bulk gasoline plants.

SECTION 1 Applicability

This regulation applies to each affected facility which was in being or had a construction permit issued by the District on or before June 13, 1979.

SECTION 2 Definitions

Terms used in this regulation not defined herein shall have the meaning given them in Regulation 1.02.

- 2.1 "Affected facility" means a bulk gasoline plant.
- 2.2 "Bottom fill system" means a system of filling transport vehicle tanks through an opening that is flush with the bottom of the transport vehicle tank.
- 2.3 "Bulk Gasoline Plant" means a facility for the storage and dispensing of gasoline that employs tank trucks, trailers, or other mobile non-marine vessels for both incoming and outgoing gasoline transfer operations.
- 2.4 "Gasoline" means any petroleum distillate having a Reid vapor pressure of 4.0 pounds per square inch or greater used as a fuel for internal combustion engines.
- 2.5 "Submerged fill tube system" means a fill tube the discharge of which is entirely submerged when the liquid level is six inches above the bottom of the transport vehicle tank.
- 2.6 "Transport Vehicle" means a tank truck, trailer, or railroad tank car.
- 2.7 "Vapor Balance System" means a combination of pipes or hoses that create a closed system between the vapor spaces of an unloading tank and a receiving tank such that vapors displaced from the receiving tank are transferred to the tank being unloaded.

SECTION 3 Standard for Volatile Organic Compounds

- 3.1 The owner or operator of an affected facility shall install, maintain, and operate:
 - 3.1.1 Stationary storage tank control devices according to Regulations 6.13 or 7.12; and
 - 3.1.2 A vapor balance system for:
 - 3.1.2.1 Filling of stationary storage tanks from transport vehicle tanks;
 - 3.1.2.2 Filling of transport vehicle tanks from stationary storage tanks; and
 - 3.1.2.3 Loading into transport vehicle tanks either:
 - 3.1.2.3.1 A submerged fill tube system; or
 - 3.1.2.3.2 A bottom fill system.

- 3.2 The vapor balance system shall be equipped with fittings which are vapor tight and will automatically close upon disconnection so as to prevent the release of organic material.
- 3.3 The cross-sectional area of the vapor return hose must be at least 50% of the cross-sectional area of the liquid fill line and free of flow restrictions.
- 3.4 The vapor balance system must be equipped with interlocking devices which prevent transfer of gasoline until the vapor return hose is connected.
- 3.5 Transport vehicle tank hatches shall be closed at all times during loading operations.
- 3.6 There shall be no leaks from the pressure/vacuum relief valves and hatch covers of the stationary storage tanks or transport vehicle tanks during loading.
- 3.7 The pressure relief valves on storage vessels and tank trucks or trailers shall be set to release at no less than 0.7 psig unless a lower setting is required by applicable fire codes.
- 3.8 The owner or operator shall not load gasoline into any transport vehicle or receive gasoline from any transport vehicle that does not have proper fittings for connection of the vapor balance system, nor shall the owner or operator load or receive gasoline unless the vapor balance system is properly connected and in good working order. Except as provided in section 3.9, the fittings on the transport vehicle tanks must be vapor tight and automatically close upon disconnection so as to prevent the release of organic material.
- 3.9 The following shall apply to the loading of a transport vehicle tank by means of a submerged fill tube system:
 - 3.9.1 When inserted into the tank, the submerged fill tube system must form a vapor tight seal with the tank; and
 - 3.9.2 Tank hatches are to be opened only for the minimum time necessary to insert or remove the submerged fill tube system.
- 3.10 No owner or operator shall permit gasoline to be spilled, discarded in sewers, stored in open containers, or handled in any other manner that would result in evaporation.
- 3.11 The owner or operator may elect to use an alternative control system if it can be demonstrated to the satisfaction of the District that the alternative system will achieve equivalent control efficiency.
- 3.12 No owner or operator of a bulk gasoline plant in Jefferson County shall allow loading of a tank truck or trailer unless the following provisions are met:
 - 3.12.1 The tank truck or trailer has a valid Kentucky pressure-vacuum test sticker as required by Regulation 6.37 attached and visibly displayed;
 - 3.12.2 The vapor balance system and associated equipment are designed and operated to prevent gauge pressure in the delivery vehicle from exceeding 450 mm water (18 inches water) and prevent vacuum from exceeding 150 mm water (six inches water);
 - 3.12.3 A pressure tap or any equivalent system as approved by the District is installed on the vapor balance system so that a liquid manometer, supplied by the owner or operator, can be connected to the tap in order to determine compliance with section 3.12.2. The pressure tap shall be installed by the owner or operator as close as possible to the connection with the tank truck or trailer, and shall consist of a 1/4 inch tubing connector which is compatible with a 3/16 inch inside diameter plastic tubing;
 - 3.12.4 During loading operations there is no reading greater than or equal to 100% of the lower explosive limit (LEL, measured as propane), at a distance of 2.5 centimeters (one inch) from the potential leak source associated with the vapor balance system of a bulk

gasoline plant, as detected by a combustible gas detector using the test procedure in section 3.12.5; and

- 3.12.5 On or after April 1, 1983, the test procedure as defined in "Control of Volatile Organic Compound Leaks from Gasoline Tank Truck and Vapor Collection Systems" (OAQPS 1.2-119) Appendix B, or an equivalent procedure approved by the District, shall be used to determine compliance with the standard prescribed in section 3.12.4 during inspections conducted pursuant to KRS 77.165 or KRS 224.10-100 (10).

SECTION 4 Compliance Timetable

- 4.1 The owner or operator of an affected facility shall be required to achieve compliance by May 1, 1981.
- 4.2 The owner or operator of a bulk plant subject to this regulation shall achieve final compliance with section 3.12 by December 1, 1982.

Adopted v1/6-13-79; effective 6-13-79; amended v2/11-16-83.
