Subject: RE: Illinois River QAPP concerns

Mark – Jason, Phil and I quickly looked over the Illinois River QAPP and have the following comments.

- 1) Shouldn't someone from both states be involved in the workgroup and be signatories to the QAPP?
- 2) Pg. 9 and 10 – recent BUMP data, prob. Mon. data and lake data were no included or mentioned. State collected data is generally ignored.
- 3) Table 1 page 17 on Secondary Data – really should detail all parameters – especially nutrients and effect variables like periphyton
- 4) More clarity would be helpful on linking the lake models and watershed models.
- 5) What is the exact role of *Cylindrospermopsis* in this work?
- 6) Page 23 Section 7.3 - The addendum to the QAPP that will be provided after the models are selected should be selected and APPROVED by the signers.

Thanks and good luck. Feel free to call with any questions.

Derek
