SUBJECT: Carbon Monoxide Hotspot Modeling in New Jersey

FROM: William S. Baker, Chief *WdB*
Air Programs Branch

TO: Joseph Tikvart, Chief
Source Receptor Analysis Branch

Attached for review and comment by the Model Clearinghouse is a draft modeling protocol we proposed for the State of New Jersey to use to justify redesignation to attainment of five cities. As indicated in Ray Werner's transmittal letter to Joseph Laznow, we are seeking your advice on the consistency of this approach with current modeling policy and your views on whether this policy may change between now and the next six months when New Jersey's redesignation request will be considered by the Administrator. We would like to advise New Jersey on the best technical approach for this redesignation.
