SUBJECT:

New Jersey CO Modeling Protocol

FROM:

Steven Sambol *Steven Sambol*
Meteorologist, Region II

TO:

Tom Braverman
Source Receptor Analysis Branch, RTP

As you know the New Jersey Department of Environmental Protection (NJDEP) has asked Region II to comment on its carbon monoxide modeling protocol. The modeling is to be done in order to redesignate five areas in the State to attainment.

Attached is the original protocol and related information which NJDEP sent to us for comment on April 14, 1988 and April 29, 1988. This correspondence plus our attached comments on correspondence of July 1, to Elston of NJDEP form the revised protocol. Please provide Model Clearinghouse comments relating to acceptability of the revised protocol, and the work to be performed by the contractor.
