Trap/Substrate	TRHD	Hester-dendy	BM-HESTER	Hester-dendy	1m X 1.5m, 595 micron mesh
Trap/Substrate	TRRB	Rock basket	BM-ROCK	Biomonitoring Rock Baskets	
Water Sampler	WSBK	Bucket	RIVBUCKET	Weighted river bucket	No specific size or shape except each bucket should be at least 2 1/2 gallons.
Water Sampler	WSOTH	Other	ARMP/VRAP	River Sampling Gear	Samples at VRAP stations are collected either by wading into the river/stream or by lowering a bucket from a bridge. In both cases the same methods are used. The samples should be collected either on the upstream side of the bridge or with the sampler facing upstream to insure the water does not flow over their legs or boots before entering the bucket. The bucket is filled with water and rinsed three times before the sample is collected. The rinse water should be poured downstream of where the sample is to be taken so the bottom sediment is not disturbed. When the bucket is being filled for the sample, water should be allowed to flow in as slowly as possible.

Gear Group Name	Field Gear ID	Gear Name	Config ID	Config Name	Specifications
Benthic Grab	BGEK	Ekman grab	EKMAN	Ekman Dredge	
Benthic Grab	BGPON	Ponar grab	PONAR	Ponar Dredge	
Electroshock	ESBP	Backpack electroshock	BK-PK	name	
Electroshock	ESBM	Boat-mounted electroshock	VVP-15	Large Stream Electroshock	For larger rivers an 18 foot work barge with a 2-cycle 65 hp Evinrude and a 2- cycle 25 hp Johnson kicker motor mounted on the left side. A Honda EX4000 is used to power a Coffelt Electronics VVP 15. This rig is capable of producing an output very close to 4000 watts and will maintain this for about 2 hours any longer than this requires lowering the power output to about 3500 watts or it will start throwing the breaker on the generator. The pulsator is capable of handling up tp 10,000 watts (AC) but the generator limits us to 4000 watts. From an output of about 1000 to about 2500 there doesn't seem to be a lot of difference in effectiveness. Once the power output is increased to about 3000 and over one can see a marked difference. The aluminum boat hull is used as the cathode. The anode is a 10 foot long fiberglass pole with a stainless steel loop at the end. The pulsators both have adjustable frequency and pulse width. When using pulsed DC current a frequency of about 80 hz seems to be the most effective. The pulse width is set to less than 20% so the duty cycle is lowered at the same output.
Electroshock	ESBM	Boat-mounted electroshock	VVP-2	Small Stream Electroshock	For smaller rivers and streams a 14 foot LOWE john boat with a 2- cycle 15 hp Johnson Outboard (in slow waters a Minn-Kota Endura 30 trolling motor is used). A Homelite 1750 watt generator and a Coffelt Electronics VVP-2 pulsator are used to collect fish. This rig has a maximum power output of about 1400 watts, it is not possible to maintain this power output because the generator will overheat and shut down. Instead a power output of about 1200 to 1000 watts (depending on the conductivity of the water) seems to work the best with this setup. The aluminum boat hull is used as the cathode. The anode is a 10 foot long fiberglass pole with a stainless steel loop at the end. The pulsators both have adjustable frequency and pulse width. When using pulsed DC current a frequency of about 80 hz seems to be the most

Gear Group Name	Field Gear ID	Gear Name	Config ID	Config Name	Specifications
Net/Non-Tow	NNKK	Kick net	NNKK_1M	Kick net - 1 meter square	
Water Sampler	WSOTH	Other	GRPO_TT	Transparency Tube	Lawrence Enterprises 130 cm transparency tube.
Water Sampler	WSOTH	Other	NPS_WSUNK N	NPS Unknown Water Sampler Gear	Standard instruments
Water Sampler	WSOTH	Other	OZAR_GRBA G	Whirl Pak Sample Bag	
Water Sampler	WSOTH	Other	SSCR_SY60	60-ml Syringe	The gear configuration was implemented at four parks as described in the report, 'Water quality and quantity of selected springs and seeps along the Colorado River Corridor, Utah and Arizona: Arches National Park, Canyonlands National Park, Glen Canyon National Recreation Area, and Grand Canyon National Park, 1997-98': U.S. Geological Survey Open-File Report 2003-496, 33 pages. A 60-ml polystyrene syringe that had been nitric acid soaked in the laboratory prior to inclusion in the field kit was used to collect samples from cracks or other locations where water was issuing, as close to the source as possible.
Water Sampler	WSPB	Pump/bailer	MORR_PB00 1	Gear to sample from Piezometer	Field equipment (i.e., tubing and bailers used for purging and sampling piezometers) were manually decontaminated according to the NJDEP procedures. Samples were placed in decontaminated sample containers and coolers for delivery to the laboratory. Technicians used latex gloves that were changed after each individual sampling event to prevent cross contamination of samples. Piezometers reached a depth of approximately eight feet below the ground surface. The ground water sampling process began by purging each piezometer prior to sampling with a decontaminated PVC bailer, or a gas powered pump and decontaminated tubing.
Water Sampler	WSPS	Pump/submersible	CACO_PUMP S	Pump, submersible	Peristaltic pump. Pump tubing is flushed with pond water prior to collection of samples.
Water Sampler	WSVD	Van Dorn bottle	CABR_OMKE L	3 Liter Van Dorn Bottle	City of San Diego Ocean Monitoring Program, Offshore Kelp Bed 2001 Monitoring-3 liter Van Dorn bottles arrayed at the required depths and messenger-tripped in series.

### 11NPSWRD

### National Park Service

Gear Group Name	Field Gear ID	Gear Name	Config ID	Config Name	Specifications
Water Sampler	WSWB	Water bottle	CABR_OMBE A	250 ml Polypropylene Bottle	City of San Diego Ocean Monitoring Program, Beach Monitoring-The 250 ml bottles were attached to a special sampling pole and dipped in the water with the bottle opening facing the surf.
Water Sampler	WSWB	Water bottle	CABR_OMOF F	Niskin or Van Dorn Bottles	City of San Diego Ocean Monitoring Program, Offshore Monitoring-Whenever possible water samples were retrieved by a Seabird SBE-32 Carousel Sampler System equipped with 1.7 liter Niskin bottles. If that sampler is unavailable a davit and winch with 1 or 3 liter Van Dorn Bottles rigged in a series on a the winch cable, and triggered closed at the required depth with a weighted messenger were used. Bacterial samples are then drawn from these bottles into sterile 250-mL or 500-mL polypropylene bottles. Water samples for oil and grease and suspended solids analysis are collected at pre-determined stations and specified depths in either 1.7-L Niskin or 3-L Van Dorn bottles.
Water Sampler	WSWB	Water bottle	CACO_WB	Water Bottle	TBD
Water Sampler	WSWB	Water bottle	GRPO_GB00 1	500 ml Glass Bottle	Samples to be analyzed for chlorophyll-a were collected in 500 ml glass bottles. Submerged sample containers were uncapped by the investigator who stood downstream and leaned into an area where stream bottom sediments were undisturbed. Samples were then placed on ice.
Water Sampler	WSWB	Water bottle	GRPO_GB00 2	1000 ml Glass Bottle	Samples to be analyzed for PCBs were collected in 1000 ml glass bottles. Submerged sample containers were uncapped by the investigator who stood downstream and leaned into an area where stream bottom sediments were undisturbed. Samples were then placed on ice.
Water Sampler	WSWB	Water bottle	GRPO_GB00 3	100 ml Glass Bottle	Samples to be analyzed for DO by a LaMotte test kit were collected in a 100 ml glass bottle. Submerged sample containers were uncapped by the investigator who stood downstream and leaned into an area where stream bottom sediments were undisturbed. Samples were then placed on ice.

Water Sampler	WSWB	Water bottle	UHL01	UHL Water Sampler	Gallon HPDE bottle
Water Sampler	WSWB	Water bottle	UHL02	UHL Automated Sampler	Automated sampler collects a sample approximately every 20 minutes and run for 24 hours total. Samples brought to lab and then composited based on flow. Composite sample then transferred to appropriate container.
Water Sampler	WSWB	Water bottle	UHL03	UHL Lake Sampling Config.	Sample collected in a 1 1/4" water column sampler. This sample is poured into a HDPE container and thoroughly mixed. Water is poured into sample bottles after this.
Water Sampler	WSWB	Water bottle	USGS01	USGS Groundwater	A tygon tube is attached to well spigot to reduce it down, using a variety of barbed fittings, to draw water into a multi-probe sampler flow-through chamber. A chemical resistant Y-fitting and stopcock are attached inline before the chamber to draw-off sample water. Field parameters (Spec Cond., pH, DO, Temp) are monitored until they have stabilized. After donning a pair of latex gloves, raw samples are usually collected first followed by filtered samples. Samples collected directly in bottles for corresponding analysis (bottles provided by UHL). All samples are then placed in a cooler, on ice if required, and sent or delivered to UHL for analysis.

### Division of Surface water (Ohio)

Gear Group Name	Field Gear ID	Gear Name	Config ID	Config Name	Specifications
Net/Non-Tow	NNDP	Dip net	BUG-QUAL	qualitative bug sample	Triangular ring frame dip nets (#30 or #40 mesh) are utilized, supplemented with direct handpicking of rocks and other available substrates.
Trap/Substrate	TRHD	Hester-dendy	BUG-QUAN	quantitative bug sample	A modified multiple-plate artificial substrate sampler (Hester and Dendy 1962) is used. The sampler is constructed of 1/8 inch (3 mm) tempered hardboard cut into 3 inch (7.5 cm) square plates and 1 inch (2.5 cm) square spacers. A total of eight plates and twelve spacers are used for each sampler. The plates and spacers are placed on a 3 inch (7.5 cm) long, 1/4 inch (6 mm) diameter eyebolt so that there are three single spaces, three double spaces, and one triple space between the plates. The total surface area of the sampler, excluding the eyebolt, approximates 1 square foot (roughly 0.1 square meter). A sampling unit consists of a composite cluster of five substrates tied to a construction block .

This unit is equipped with the exclusive "Manning Deep Fry" option which increases the AMP range of a normal shocker 200 fold. Properly adjusted, this unit combines aspects of a fisheries evaluation with a first-class dinner on-site.
Miscellaneous/Other	MSHL	Hook and line	CBG-015	Fly Rod, 3 lb test	This is a high performance graphite fly rod equipped with 3 lb test and is used for collection of Red Drum, Striper, Sea Trout, Bone Fish. In the hands of an expert, a very effective collection configuration.
Miscellaneous/Other	MSOTH	Other	CBG-016	Scalpel, #3 Blade	Sharp.
Net/Horizontal Tow	NTOT	Otter trawl	CBG-014	Chesapeake Bay Otter Trawl-1	This is a highly modified Otter Trawl, it was customized designed by the Manning Scientific & Correctional Facility Supply Company, it incorporates the exclusive "Manning Escape Proof" feature. The main body of the net is constructed of #9 twine, 1-1/2" str. mesh and bag of the trawl is made of #18 twine, 1-1/2" str. mesh. Both of these panels are dipped in commercial grade green net dip to increase net life. The top and bottom lines of the trawl extend 4' and are attached through holes at the back of the trawl doors. The top line of the trawl opening is constructed 3/8" PolyDac line and has four floats (PVC foam, 2-1/2" dia., 1-1/2" long) spaced along its entirety. The bottom line of the trawl mouth is constructed of 3/8" PolyDac line and is weighted by a 6 ft length of 1/4" chain.

Benthic Corer	BCHC	Hand corer	CORER-1	Hand Corer, 6 in dia	
Benthic Grab	BGPONPT	Petite ponar grab	PPG-NCAGU	Petite ponar grab:NCA-Gulf	Petite ponar grab used in NCA-Gulf 2000 by Alabama at all stations
Benthic Grab	BGVV	Van Veen grab	VAN-VEEN-1	Van Veen grab samplers	For EMAP-Estuaries Virginian Province, National Coastal Assessment-Northeast, and National Coastal Assessment-Gulf 2000, a 1/25 (0.04) m2, Kynar-coated stainless steel, Young-modified Van Veen grab sampler was used to collect sediments. This grab sampled an area of 440 cm2 and had a maximum depth of penetration in the sediment of 10 cm. For EMAP-West, either a 0.1 or 0.04 m2 Young-modified Van Veen sediment grab made of Kynar-coated stainless steel was used to collect sediments.
Electroshock	ESSS	Stream-side electroshock	ESHOC-NCA	Electroshock equipment in NCA	Electroshock equipment was used in NCA-Gulf 2000 by state of Alabama at a few stations
Net/Horizontal Tow	NTOT	Otter trawl	OTTER-01	Otter Trawl for Fish/Shellfish	The EPA standard fish trawl was conducted which filters fish from the near bottom waters. The trawl net is a funnel-shaped high-rise sampling trawl. The net includes a 16 meter tow line, a chain sweep, 5 cm mesh wings, and a 2.5 cm cod end. Fish were herded into the net by ground wire and an overhanging panel. Standard trawls were 10 ± 2 minutes in duration with a towing speed of 2-3 knots through the water against the prevailing current (1-3 knots relative to the bottom).
Net/Horizontal Tow	NTSV	Single-vessel operated tow net	TRWL-NCANE	High-rise trawl: 2000 NCA-NE	The EPA standard fish trawl was conducted which filters fish from the near bottom waters. The trawl net is a funnel-shaped high-rise sampling trawl. The net includes a 16 meter tow line, a chain sweep, 5 cm mesh wings, and a 2.5 cm cod end. Fish were herded into the net by ground wire and an overhanging panel. Standard trawls were 10 ± 2 minutes in duration with a towing speed of 2-3 knots through the water against the prevailing current (1-3 knots relative to the bottom). Different state cooperative agreements used different standard procedures: CT, MA and RI trawl duration was 20 minutes; NH was 4 minutes. Therefore, fish community measures cannot be easily compared across all states.

Miscellaneous/Other	MSOTH	Other	E-SHOCK	Electroshocking	Electrode shocker powered by a backpack generator and/or a Boat-mounted electroshocker
Miscellaneous/Other	MSOTH	Other	NETS-SHOCK	Seine/Shock Combination	Records are incomplete and this configuration may include a combination of procedures, seining and shocking as described below. The collection of fish follows a modified version of the EPA Rapid Bioassessment Protocol V (EPA, 1989) supplemented by other documents. Specific techniques for, and relative advantages of seining and electrofishing vary considerably according to stream type and conductivity. The specifics are discussed in detail in Fisheries Techniques (edited by L.A. Nielsen and D.L. Johnson and published by the American Fisheries Society 1983). The collection of fish involves the use of two collection methods, seining and electroshocking. The combination of methods was selected in order to produce a representative fish collection. Variations of habitat, type of fish, and water chemistry dictate the use of different collection techniques. In general, each stream is sampled for a distance of 400 m. Seining is conducted before shocking. Seine height is dictated by water depth, and length is determined by width of the water being sampled. If possible, the seine should be 15-25% longer than the width of the waterbody being sampled and about 25% higher than the depth of the water. The seine is hauled with the current because fish tend to orient towards the current. Electrofishing involves the use of a backpack shocker that consists of a trailing stainless steel cable electrode and ring electrode mounted on the end of a fiberglass pole. The shocking team consists of at least two people. One carries and operates the shocker while the other(s) net stunned fish. The shocker is most useful where a seine cannot be used effectively in areas such as brush piles, rootwads, and cobble substrates. The forward electrode is gradually passed back and forth as the team walks downstream. As

## Sample Collection/Creation Gear/Equipment Configurations

**OKCONCOM**

**Oklahoma Conservation Commission**

Gear Group Name	Field Gear ID	Gear Name	Config ID	Config Name	Specifications
					fish are stunned, they usually roll over and become more visible, allowing the netters to see and capture them. In waters of high conductivity (> 1000 $\mu$ S/cm) electroshocking is ineffective, due to the highly conductive nature of the water. Under these conditions, only seining is conducted. In general, all fish are placed in 10% formalin immediately after capture. However, if larger fish (> 100 g) can be positively identified in the field, they are returned to the water in a location where recapture is unlikely. All large fish released are photographed on print film. A representative photograph is taken when large numbers of one fish species is collected and released. Collected organisms are identified to species by an experienced taxonomist.
Miscellaneous/Other	MSOTH	Other	SEINE NETS	Seine Nets	4 x 10, 6 x 30, and 4 x 30 seines and any nets of other sizes are used as preferred by the crew leader. All seines should be ¼ inch mesh. Dip nets are also used to collect shocked fish.

<b>Gear Group Name</b>	<b>Field Gear ID</b>	<b>Gear Name</b>	<b>Config ID</b>	<b>Config Name</b>	<b>Specifications</b>
Net/Non-Tow	NNKK	Kick net	NNKK	Kick Net	Low Gradient invertebrate sampling
Trap/Substrate	TRSU	Surber sampler	GR-MACROS	Surber Sampler	<p>The Surber Sampler involves a one foot square frame that is placed onto the stream substrate. The mesh size is 500 microns, (1000 in 1992) and the vertical section of the frame has the net attached and captures the dislodged organisms from the sampling area. The Sampler is placed eight times, at randomly determined locations, throughout the riffle and a composite sample is taken. The Surber sampler is used on the collection of macroinvertebrates because it:</p> <ol style="list-style-type: none"> <li>1. is a common and widely used sampler for stream riffle habitat;</li> <li>2. Ensures that a standard area of the substrate is sampled;</li> <li>3. Ensures equal sampling effort among locations for optimal comparability;</li> <li>4. Provides quantitative data that results in better resolution among stream types than for qualitative data (Robinson and Minshall, 1992)</li> </ol>
Water Sampler	WSWB	Water bottle	GR-WATER	Water Sample Container	<p>These plastic containers are used for the collection of water samples and the size of the bottle depends on the parameter of consideration. Glass containers are used in the collection of Oil and Grease samples.</p>
