# NATTS QA Objective

Data Quality Objectives (DQOs) are tied to the GPRA goal of reduction of Air Toxics by 75% (1993 levels) by 2010:

*“To be able to detect a 15% difference (trend) between two successive 3-year annual mean concentrations within acceptable levels of decision error.”*

To meet these DQOs we need:

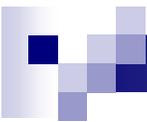

- 
- 1-in-6 day sampling frequency with at least an 85% quarterly completeness;
  - precision controlled to a Coefficient of Variance (CV) of no more than 15%;
  - detectability based on 2001 Pilot Study Minimum Detection Limits (MDLs);
  - bias for the data set is expected to be zero.

These are our Measurement Quality Objectives (MQOs)!

## DQOs and Parameters

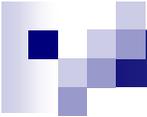

- Initially, six compounds had DQOs calculated
- benzene, 1,3-butadiene – VOCs
- formaldehyde, acrolein – Aldehydes
- arsenic, chromium – Metals
  - chromium was replaced with hexavalent chromium;
  - acrolein – issues with method;
  - Bottom line: There are now 4 compounds with DQOs. chromium and acrolein DQOs are not valid!

# NATTS QA Program

## Measurement Quality Objectives (MQOs)

<b>Compound</b>	<b>Precision (CV)</b>	<b>Bias (Lab)</b>	<b>Detectability (Pilot Study)</b>	<b>Completeness</b>
<b>Arsenic</b>	<b>&lt; 15%</b>	<b>&lt; 25%</b>	<b>0.046 ng/m<sup>3</sup></b>	<b>&gt; 85%</b>
<b>Benzene</b>	<b>&lt; 15%</b>	<b>&lt; 25%</b>	<b>0.044 ug/m<sup>3</sup></b>	<b>&gt; 85%</b>
<b>1,3-Butadiene</b>	<b>&lt; 15%</b>	<b>&lt; 25%</b>	<b>0.020 ug/m<sup>3</sup></b>	<b>&gt; 85%</b>
<b>Formaldehyde</b>	<b>&lt; 15%</b>	<b>&lt; 25%</b>	<b>0.014 ug/m<sup>3</sup></b>	<b>&gt; 85%</b>

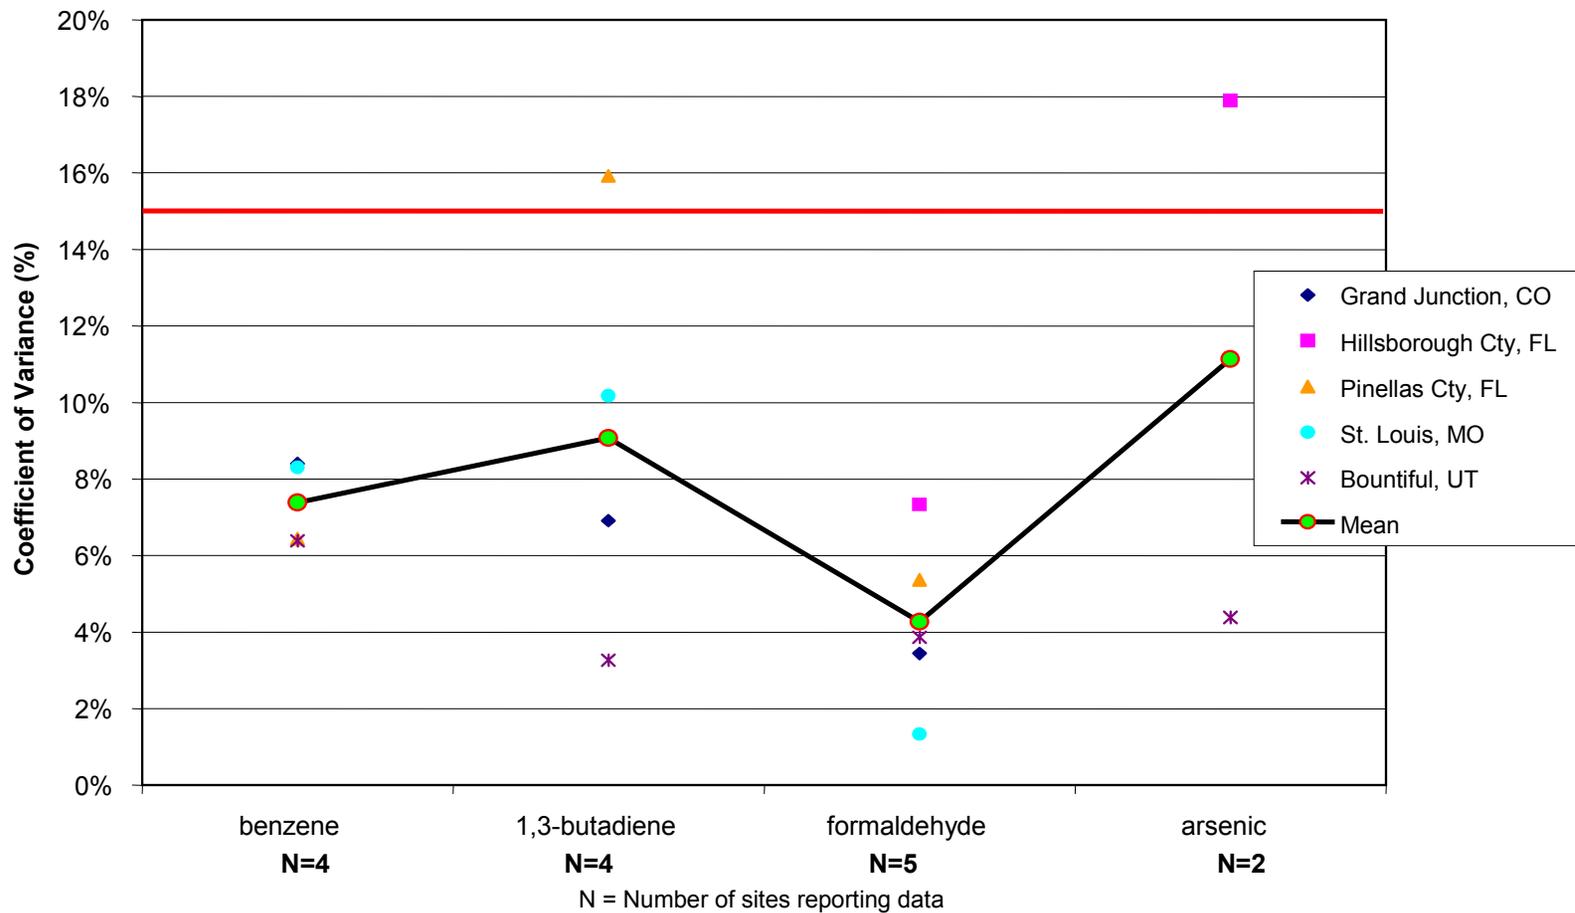

# NATTS MQOs

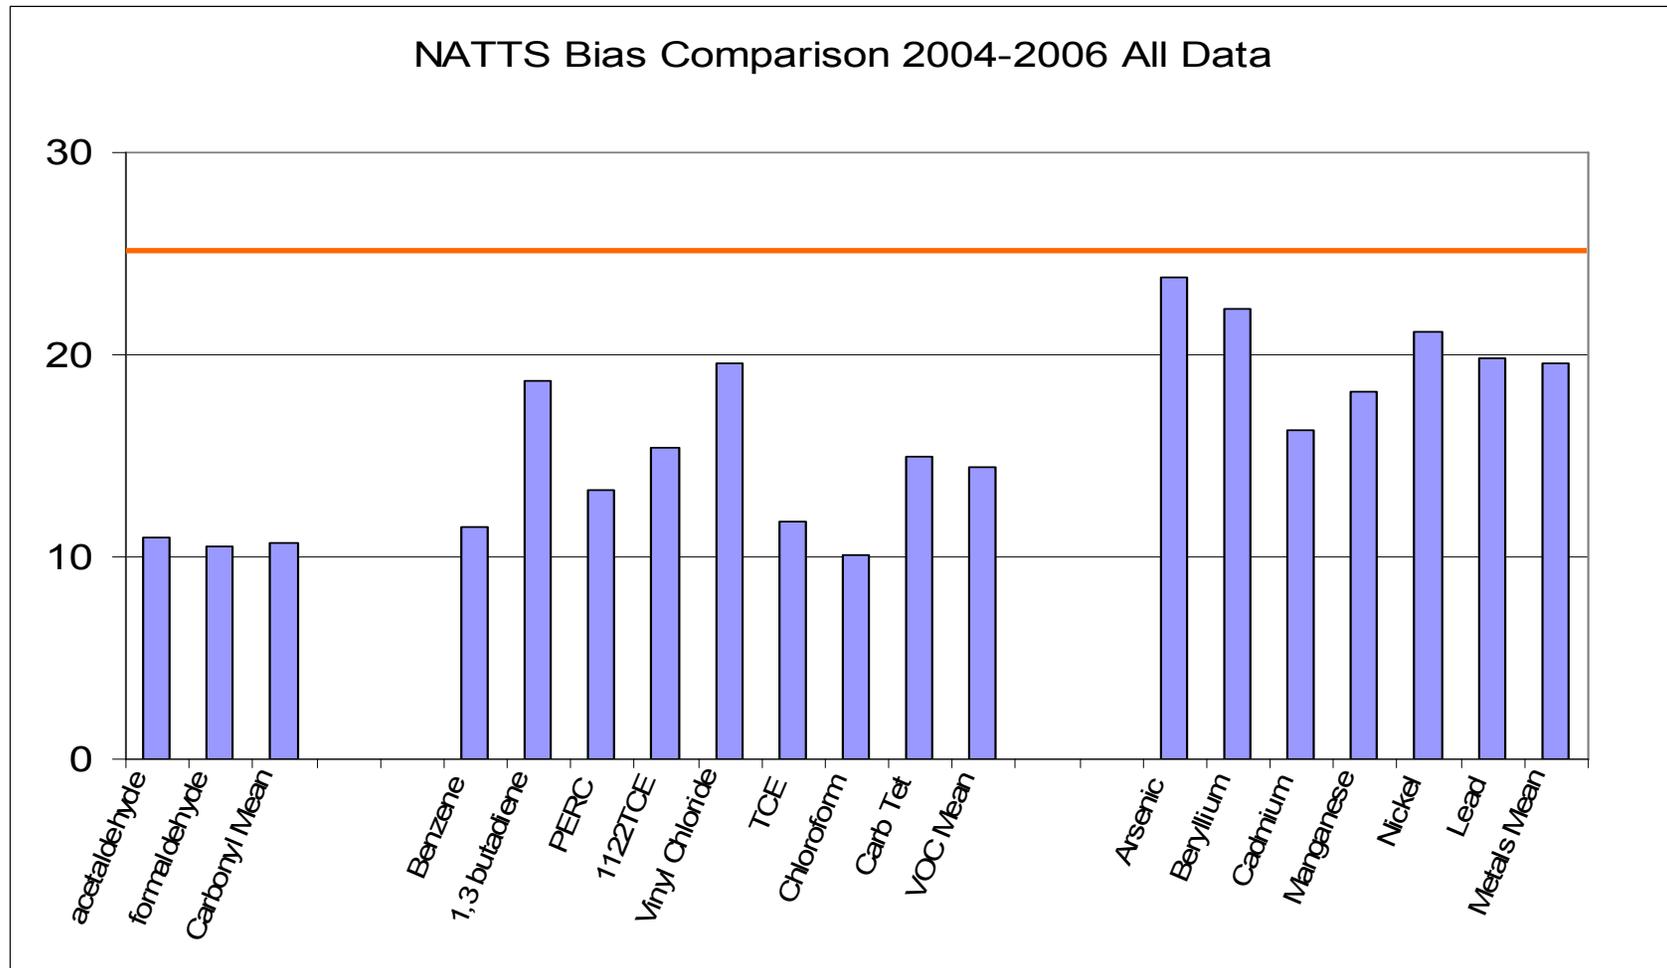

## Sources of MQO data

<b>MQO</b>	<b>Source of Data</b>	<b>Tolerance</b>	<b>Units</b>
<b>Precision – CV</b>	<b>Air Quality System (AQS)</b>	<b>&lt; 15%</b>	<b>Percent Difference</b>
<b>Bias</b>	<b>Proficiency Testing and Field Sampler Audits</b>	<b>&lt; 25% for Labs and &lt; 15% for field</b>	<b>Percent Difference</b>
<b>Detectability</b>	<b>Laboratories</b>	<b>Variable</b>	<b>ug/m3 or ng/m3</b>
<b>Completeness</b>	<b>AQS</b>	<b>&gt; 85%</b>	<b>Percent of possible samples</b>

Data Completeness: Comparison 2004 – 2005  
Target: 85%

Compound	Benzene	1,3 Butadiene	Formaldehyde	Arsenic
Mean 2004	75.5	78.0	78.0	48.6
Mean 2005	83.0	82.9	77.7	52.3
Median 2004	90.0	91.5	92.0	47.0
Median 2005	90.0	89.0	92.0	87.0

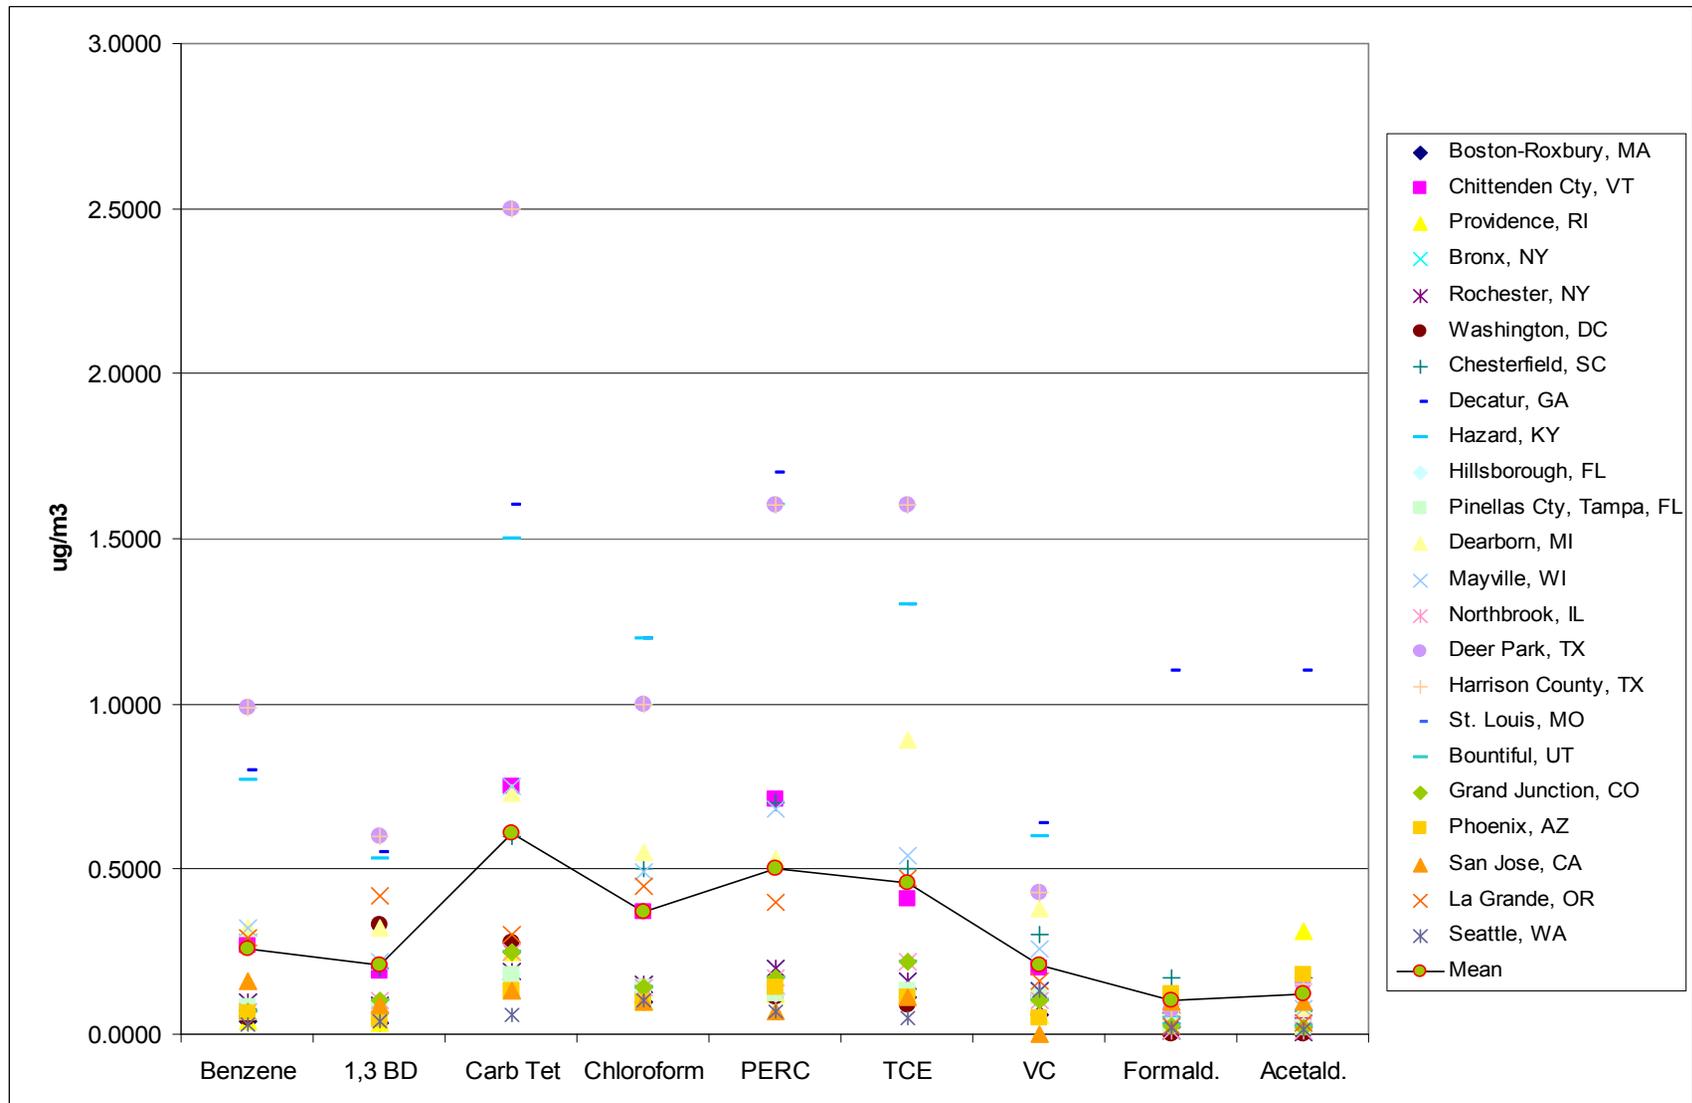

# Completeness: Calendar Year 2004

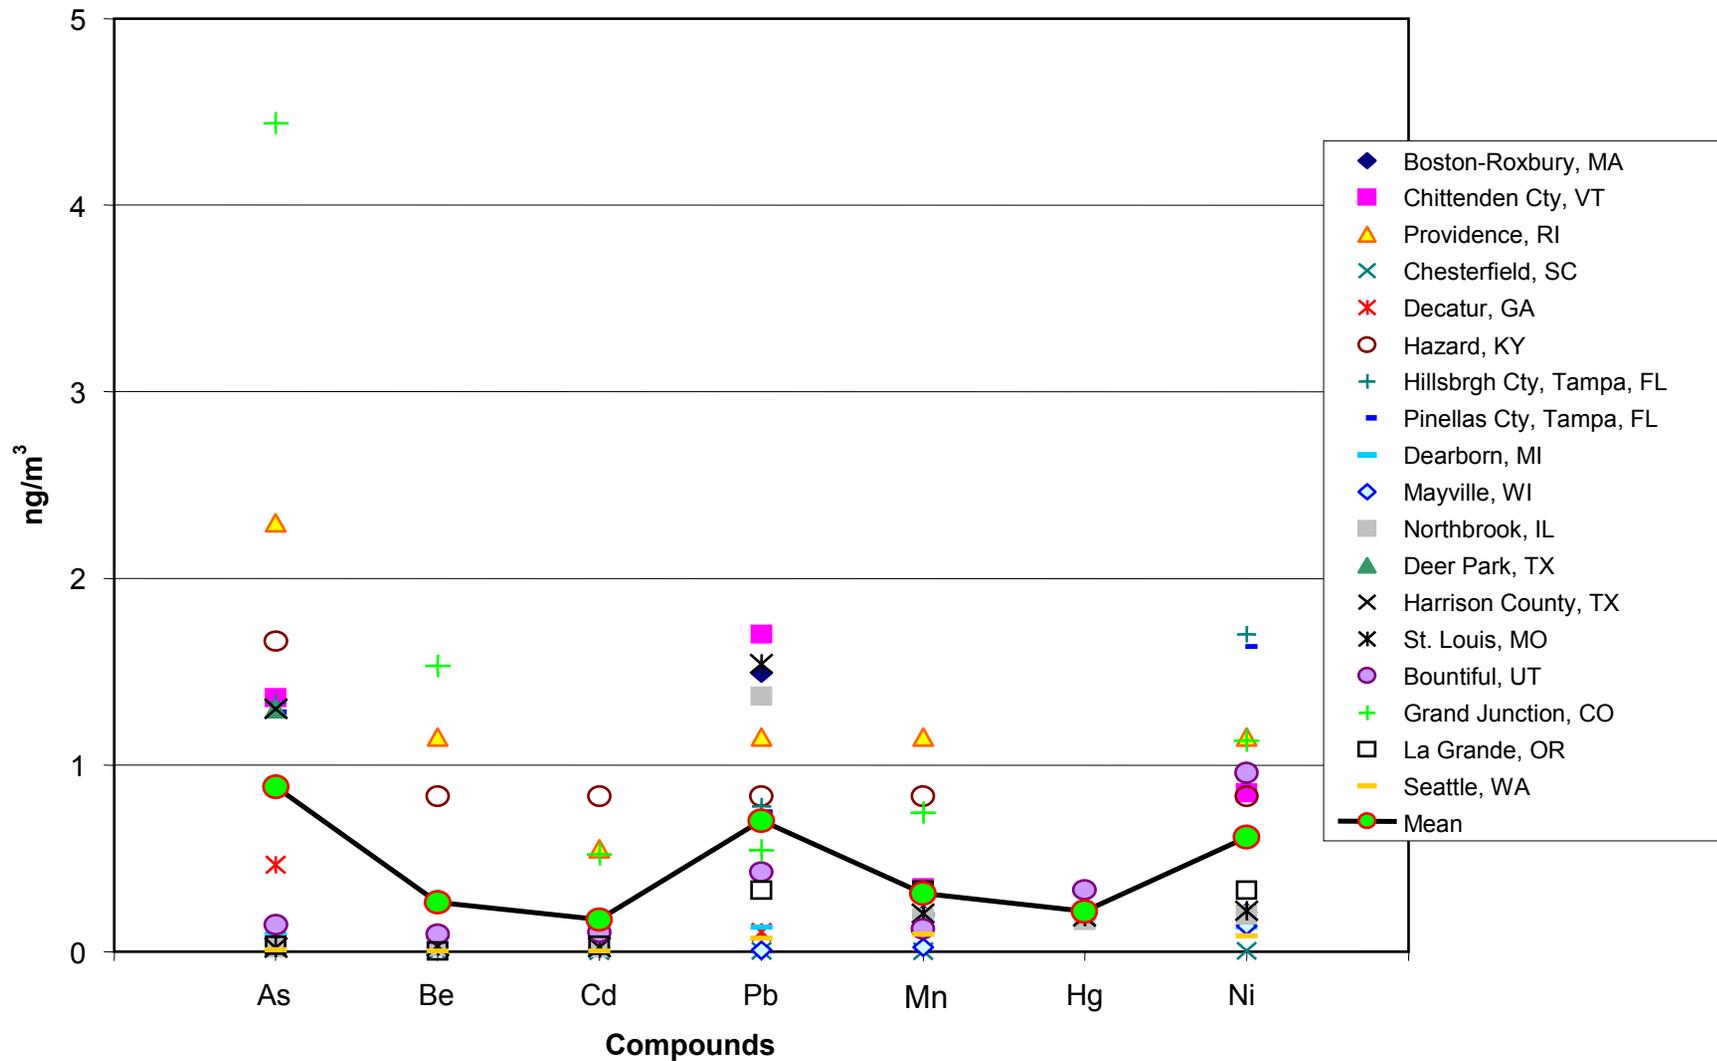

# Completeness: Calendar Year 2005

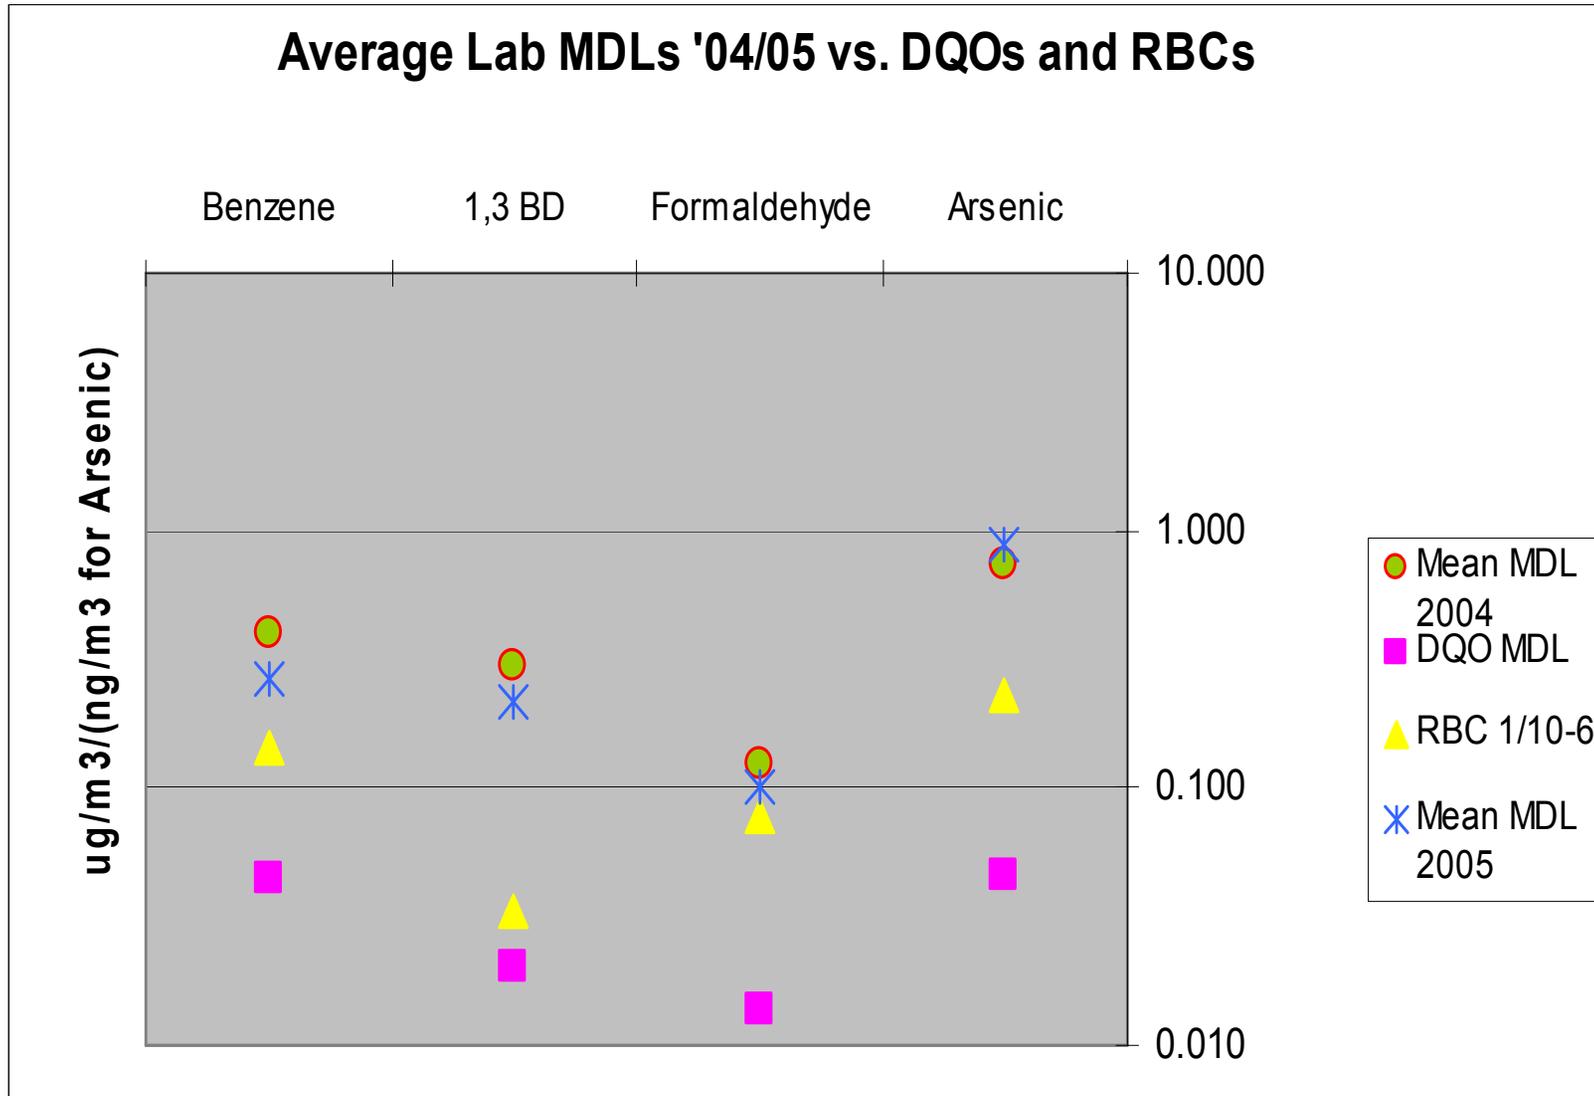

# Detectability: MDLs Reported 2005 VOCs/Carbonyls

# Detectability: MDLs Reported 2005 Metals

# Detectability: Mean MDLs Reported 2004/2005

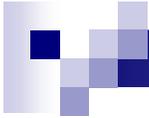

## Technical System Audits: Lessons Learned

- All stations and most labs audited (DRI, Reno Nevada still to be audited)
- Two years to complete
- Most common problems found:
  - QAPPs and SOPs needing to be updated;
  - No system in place for QAPP/SOP review and updating;
  - Field Blanks were not collected at a number of sites.
- Overall, Battelle found most labs doing an excellent job!

## PT Program Expansion

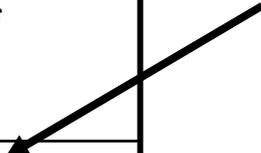

- Shortly after PT program started, we began to get requests from Non-NATTS labs for PT samples;
- In 2006, we expanded the program to include Non-NATTS lab;
- The EPA Regional Labs (6) requested inclusion;
- The PT program is flexible, i.e., a non-NATTS lab can buy-in for any number of samples.

## PT Program Expansion: Number of Lab Participating

	Startup (2004)	Currently
Carbonyls	17	24
Metals	15	19
VOC	15	29*
Total	47	72*

**This is a 53%  
increase  
All Voluntary!!**

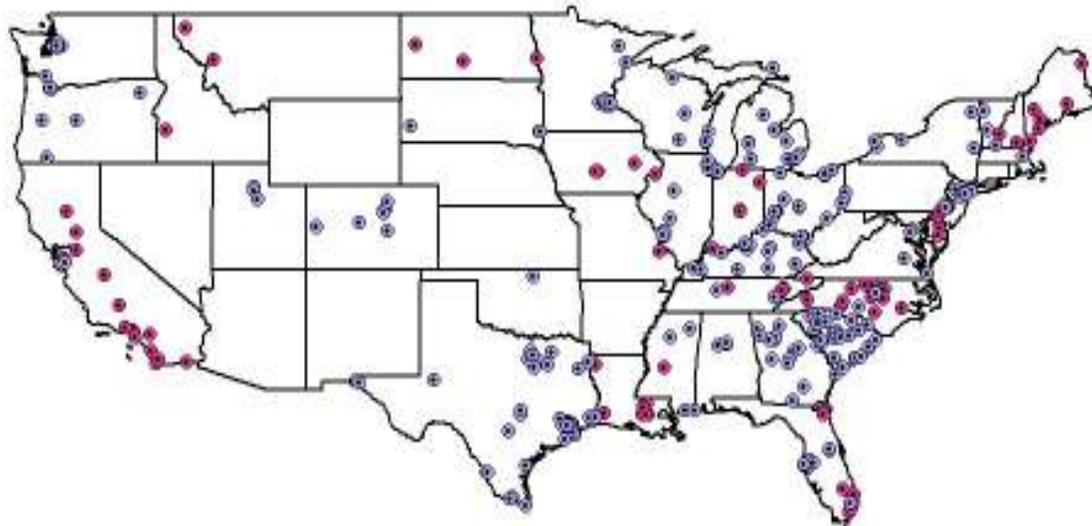

\* Six of these labs are EPA Regional labs (Regions 1,3,4,5,6 and 9)

# PT Program Expansion

- Currently, there are 417 Air Toxics Stations in US

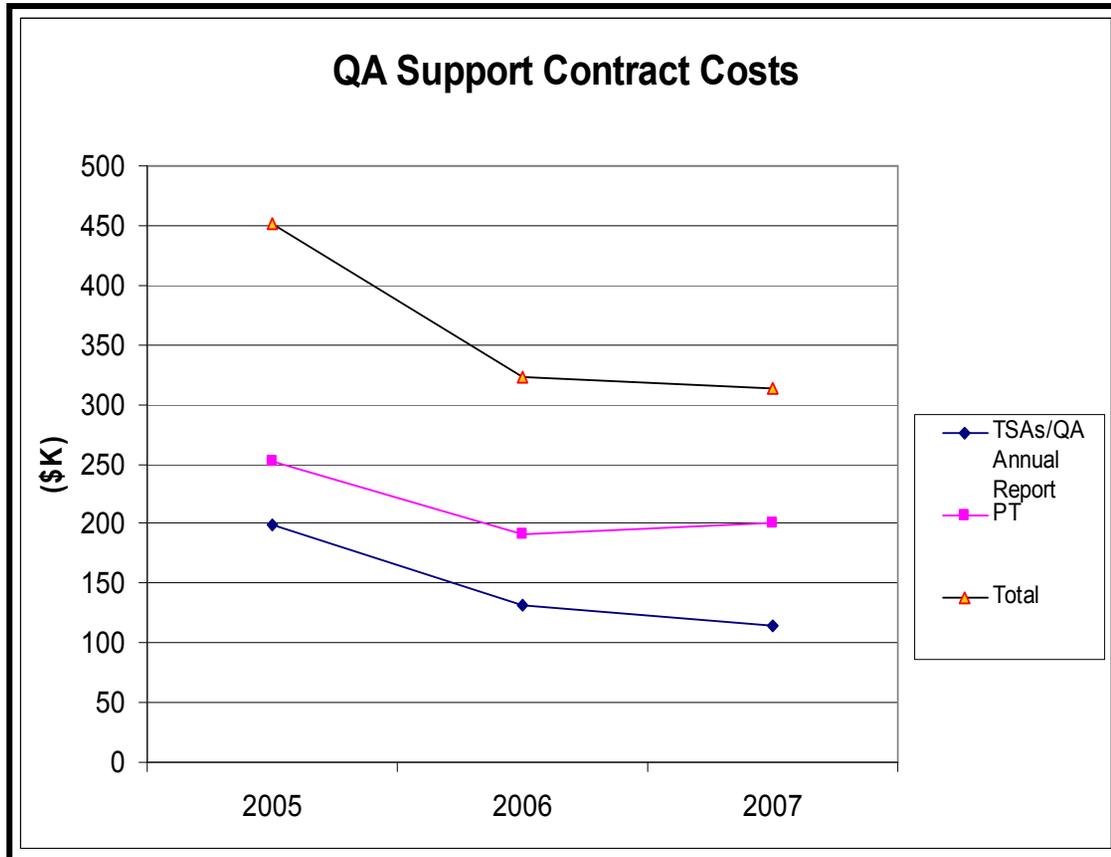

- For 75% (314) of these sites, the supporting labs are analyzing PT Samples

- Our goal, 100% of all Air Toxics labs analyzing PT samples.

● Air Toxics sites with PT support  
● National Air Toxics Network

# Is the QA Program Cost Effective?

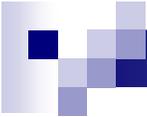

Year	2005	2006	2007
% of NATTS Funds	14%	10%	9%

# Is the Program Able to Meet the DQOs?

- ✓ **Short Answer: No, we are not meeting the DQOs for the second year in a row.**
  - ✓ The mean data completeness is below the required 85% for the 2<sup>nd</sup> year in a row. Improvement has been seen in this area;
  - ✓ The detectability for the 4 DQO compounds does not meet the MDLs stated in the DQOs, although there are improvement;
  - ✓ The CV data from the collocated/duplicate data illustrates that we are meeting a coefficient of variance of less than 15%;
  - ✓ Although not strictly a DQO, the laboratories are meeting the 25% Bias requirement.

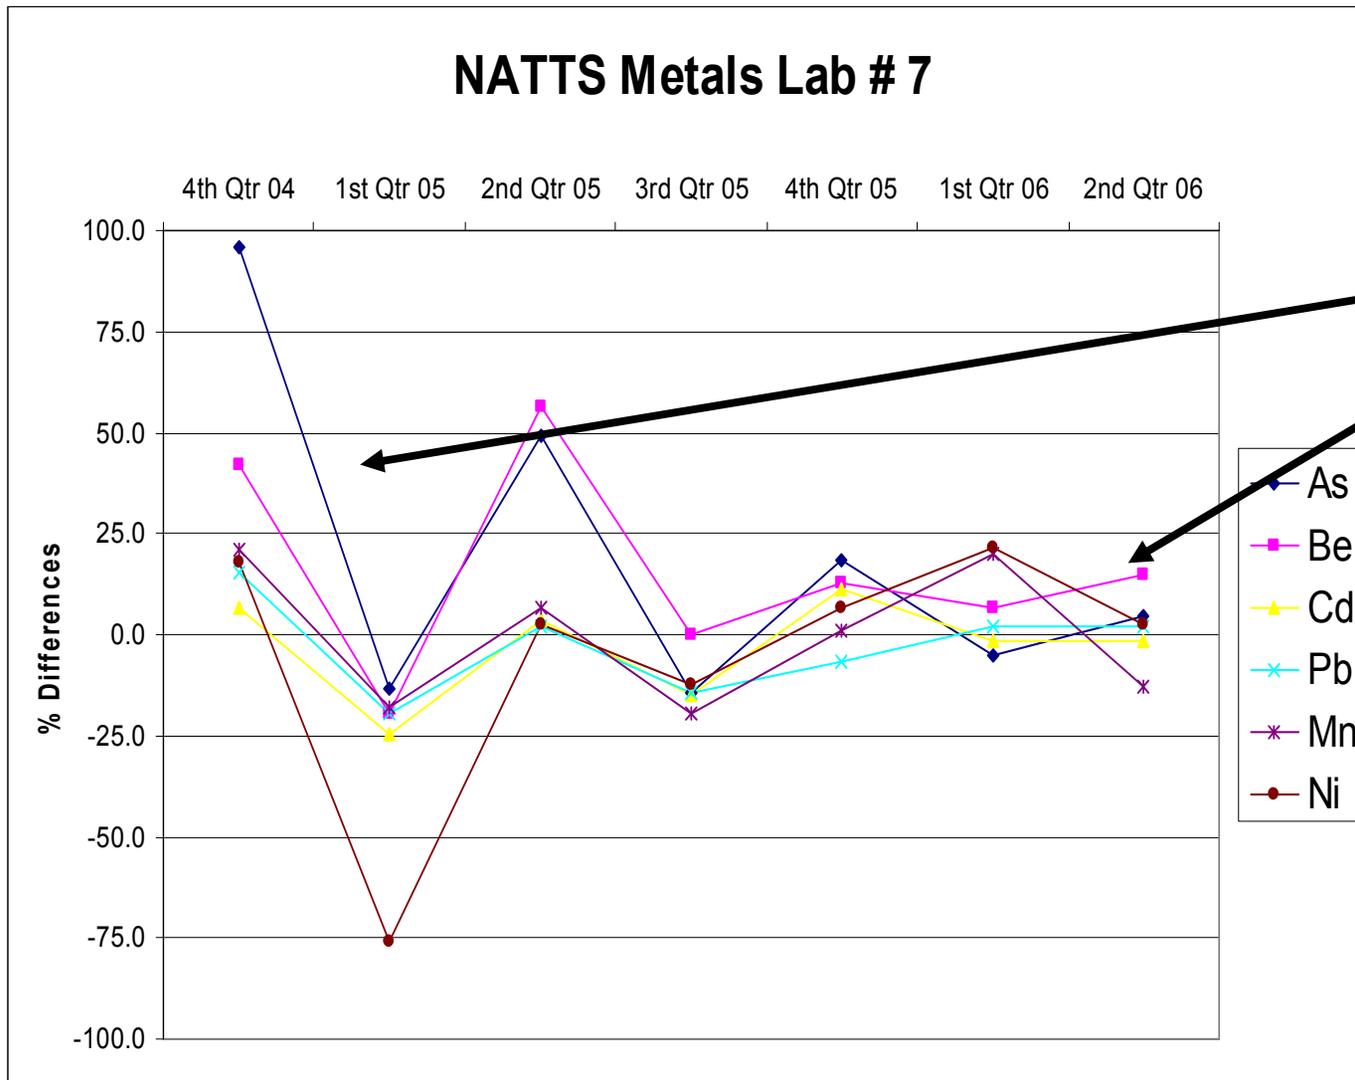

## Is the NATTS QA Program Successful?

- **Yes, the NATTS QA program is very successful:**

- ✓ The PT program illustrated the problem with quantifying double bond aldehydes and ketones;
- ✓ The program allows all stakeholders to understand the precision, detectability, and bias;
- ✓ The PT program illustrates there is method based bias;
- ✓ NATTS labs can now see how they compare nationally;
- ✓ Inter-laboratory variability exists;
- ✓ PT program allows low-cost independent verification and helps labs meet NELAC requirements;
- ✓ We understand the realistic quality of HAPS data;
- ✓ It helped the labs decrease their variability, thus increasing confidence in the data.

# Is the QA Program Successful?

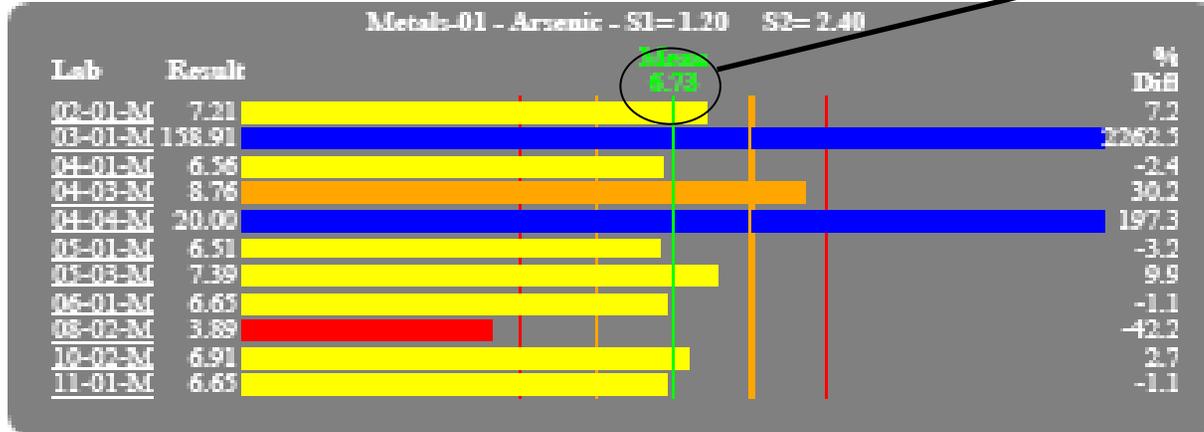

Example of the NATTS QA Program helping Improve Quality

# Is the QA Program Successful?

Study Number: 200502-M

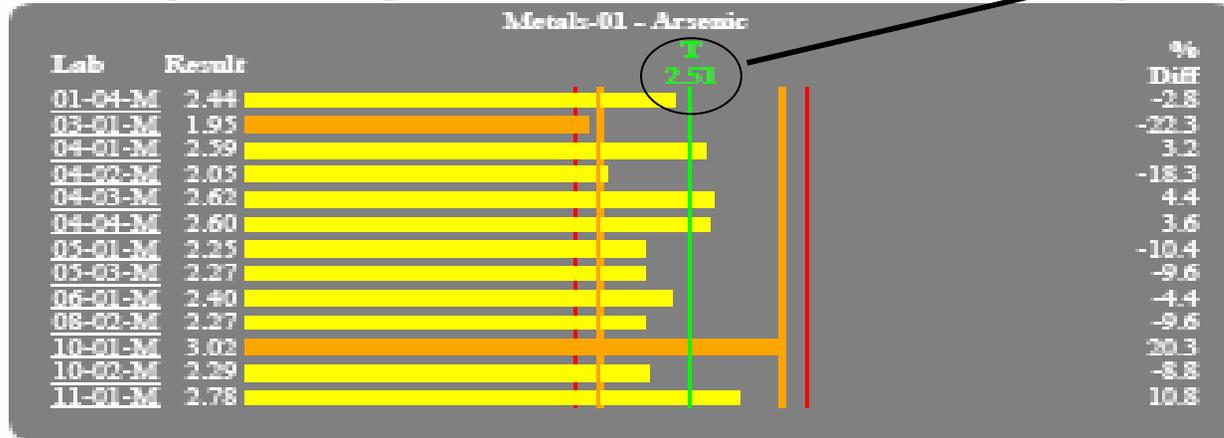

Accepted Warning Outside Outlier NE Not Evaluated NR Not Reported NI No Information

Target Value = 6.73 ug/filter  
 Mean = 15.1 ug/filter (223.6 %)  
 Median = 6.9 ug/filter ( 2.7 %)  
 STD = 45.7 ug/filter (679.0 %)

Study Number: 200602-M

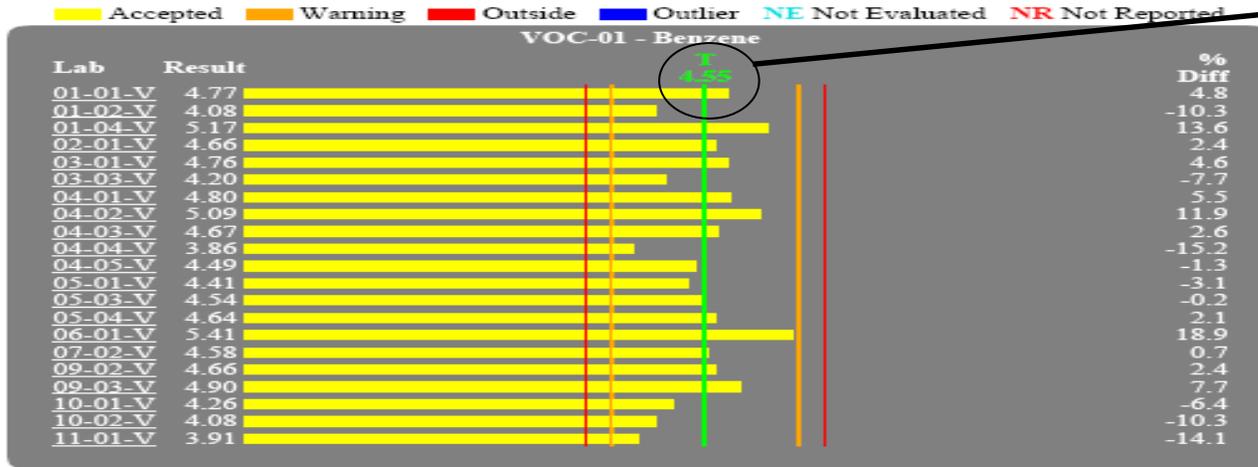

Accepted Warning Outside Outlier NE Not Evaluated NR Not Reported

Target Value = 2.51 ug/filter  
 Mean = 2.42 ug/filter (-3.6 %)  
 Median = 2.40 ug/filter (-4.4 %)  
 STD = 0.31 ug/filter (12.1 %)

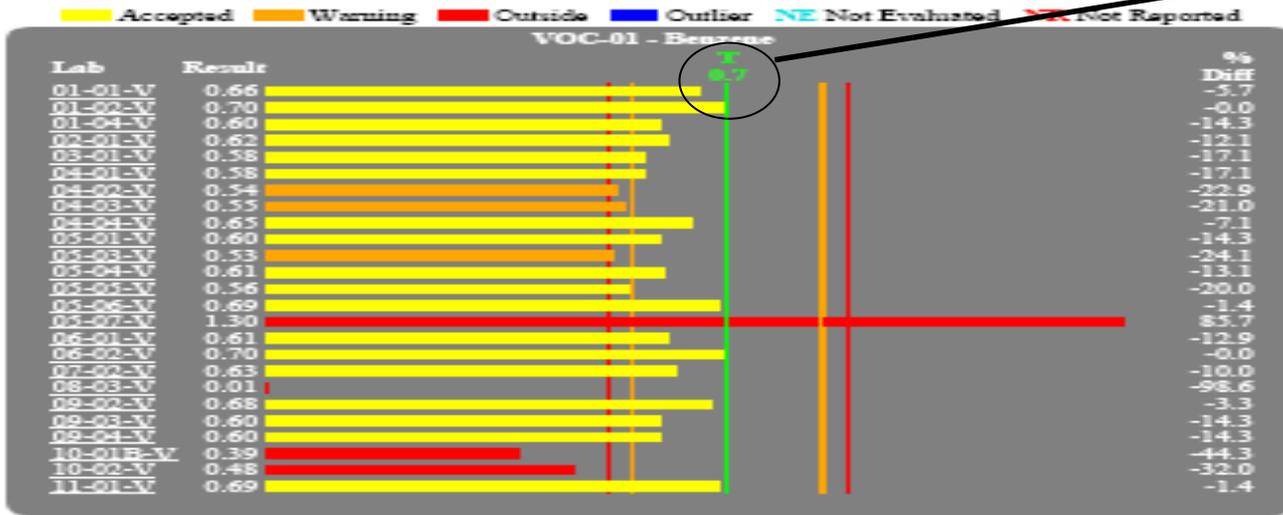

# Is the QA Program Successful?

Study Number: 200601-V

Target Value = 4.55 ppbv  
 Mean = 4.57 ppbv (0.5 %)  
 Median 4.65 ppbv (2.2 %)  
 STD = 0.405 ppbv (8.9 %)

Study Number: 200602-V

Target Value = 0.7 ppbv  
 Mean = 0.62 ppbv (-12.1 %)  
 Median 0.60 ppbv (-13.7 %)  
 STD = 0.20 ppbv (28.4 %)

## Recommendations

- **Recommend working with STAPPA/ALAPCO and NATTS agencies to increase data completeness;**
- **Recommend that we work together to get all Air Toxics labs analyzing PT samples at least once per year;**
- **Recommend we continues our task force to see how to lower MDLs.**
