

Questions related to integrated monitoring strategy:

Consider the following from your perspective (e.g., ground, water, remote/satellite, intensives, rural, urban, national, international, State/local) and try to provide relatively specific responses.

1. What advantage is gained through linking networks of related information?
2. What barriers exist that compromise network and data sharing? What steps can be taken to address such barriers?
3. What are the major data gaps that if filled would yield geometric benefits in terms of network linkage and data value?
4. How do organizations sublimate an organizational priority relative to a “gap” priority that transcends organizational needs but addresses a larger need in the context of supporting a net “greater good” for all organizations?
5. What is your conception or vision of a more effective observational framework?
