

# The Emission Inventory System (EIS) Bridge Tool

M. Husk, S. Dombrowski, U.S. EPA

- Includes MS Access staging tables which are used to load data to conform to the data requirements of the EIS.

- Staging tables are then uploaded to the EIS Bridge, which generates the EIS CERS XML file.

- The resulting file is submitted through the CDX node, Node client or web client to the EIS.

- The bridge could be used to download data from the EIS into the staging tables for ease of use.
