

CARBON DISCLOSURE PROJECT

accenture

High performance. Delivered.

***The Transparency Imperative in GhG Reporting:
The Role of Technology in Streamlining and Enhancing Reporting***

29 September 2010

GHG Transparency – The Role of Technology

Key content of our presentation

- Regulations are driving carbon emissions disclosure
- The Carbon Disclosure Ecosystem
- Accenture's Carbon Performance Management Framework
- Carbon Reporting Challenges
- Technology in the New Carbon Age
- CDP Case Study: The CDP Global Climate Change Reporting Platform

The complexity of carbon registries become will increase over time, as will the technology that supports carbon disclosure

Registry solutions can be segmented by the number and type of external linkages, the robustness of the solution and the requirement to process transactions. Accenture has identified three segments of registry functionality and sophistication.

Description

- Simple registries with limited functionality
- Accenture could partner or initially investment into a first client opportunity to build up knowledge

Reporting *Basic*

Linking *None*

Legislation *Optional requirement*

Scale *Limited sophistication*

Size *Limited coverage*

Description

- Sophisticated registry systems with compliance, trading, reporting and capabilities to link with other registries

Reporting *Generate reports for multiple registries*

Linking *Linking capability*

Legislation *Linking to compliant registries*

Scale *Sophisticated*

Size *Multi registry coverage*

Description

- Advanced asset and liabilities registries, allowing users to meet multiple reporting, compliance and trading requirements

Reporting *Advanced with custom components*

Linking *Fully linked as per regulations*

Legislation *Mandatory compliance*

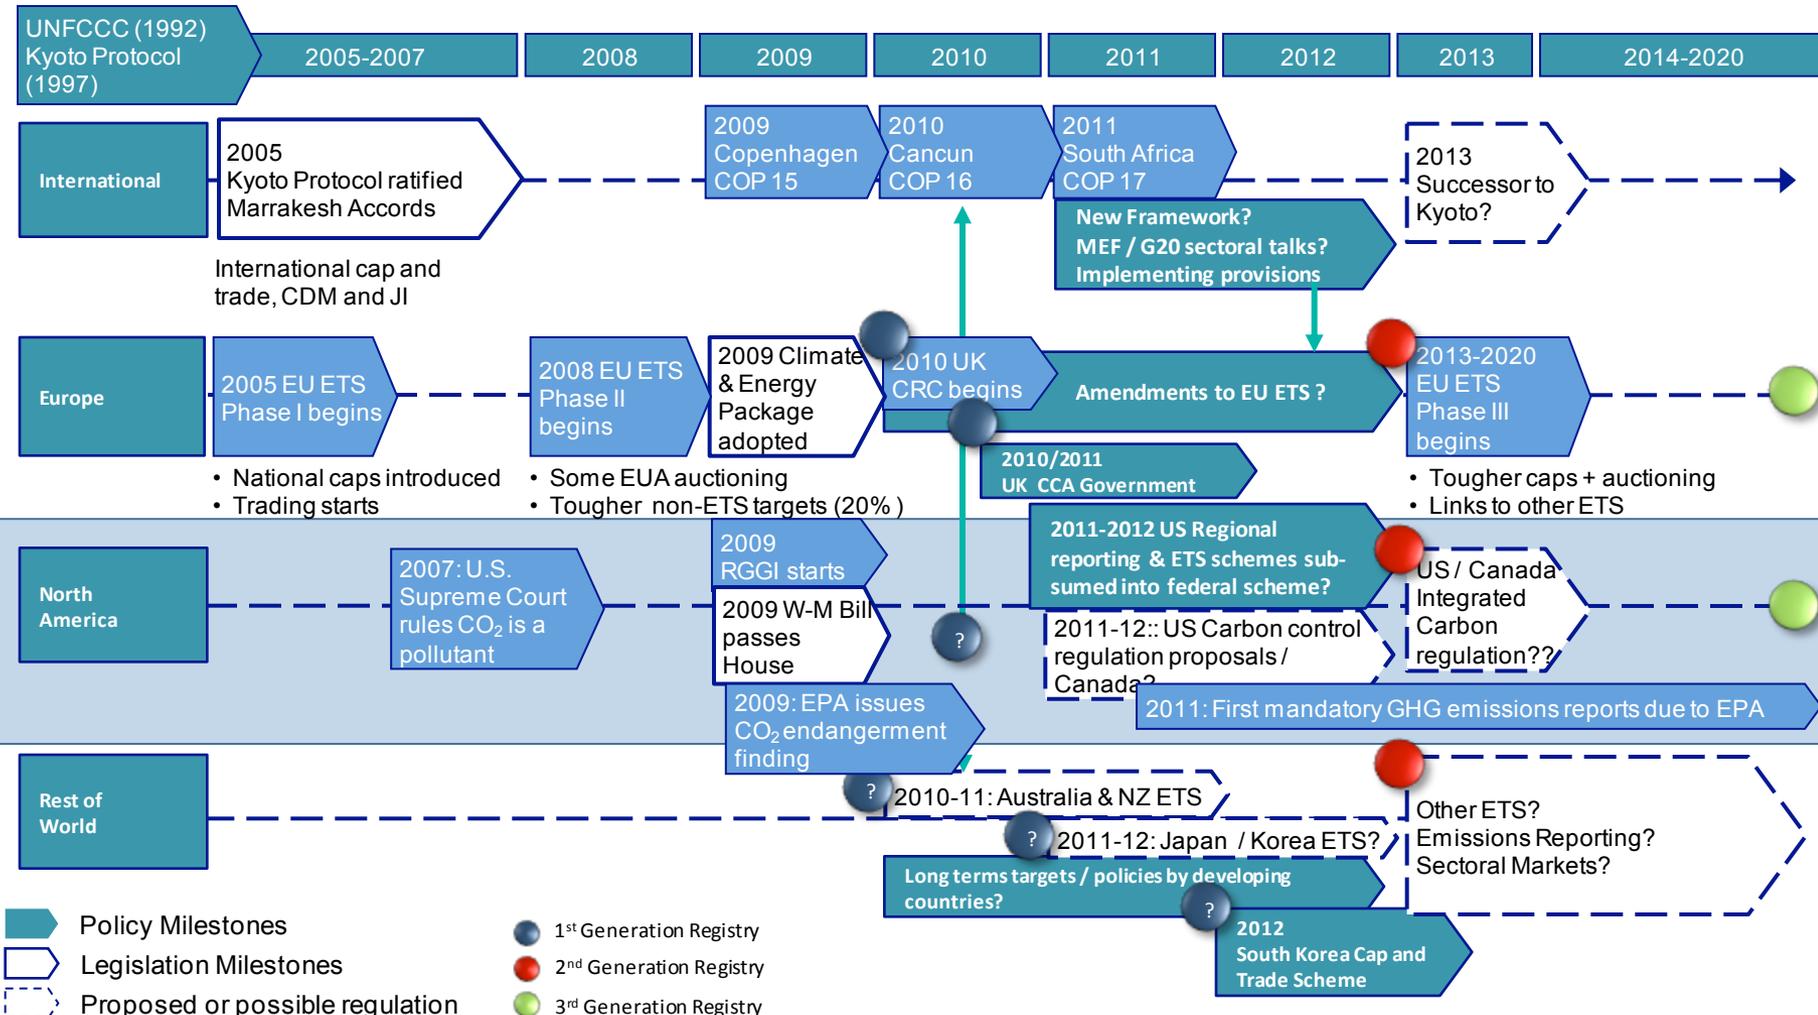

Scale *Very sophisticated*

Size *Historic data, multi sector, wide coverage*

The evolving global climate change policy debate highlights the growing emphasis on carbon registries of increasing sophistication

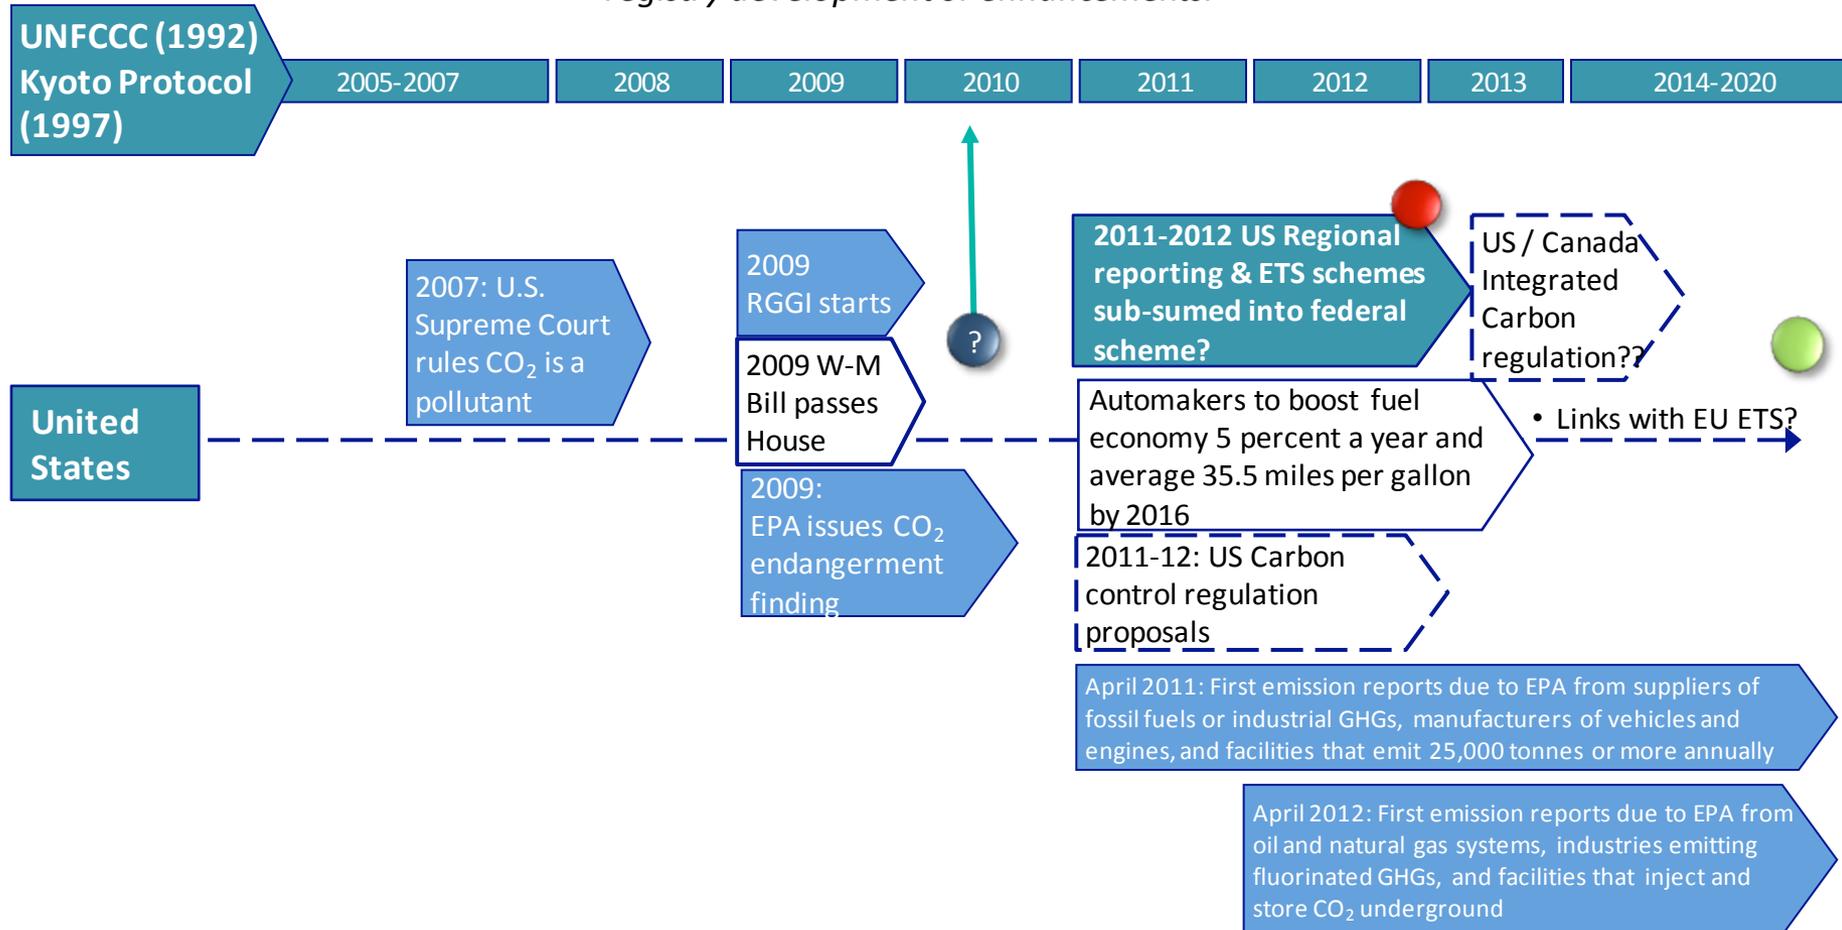

To support upcoming global legislation carbon registries will be required and several geographies lead the way in potential registry development or enhancements.

The EPA continues to take small but certain steps to cut carbon emissions: these actions will likely add up over time.

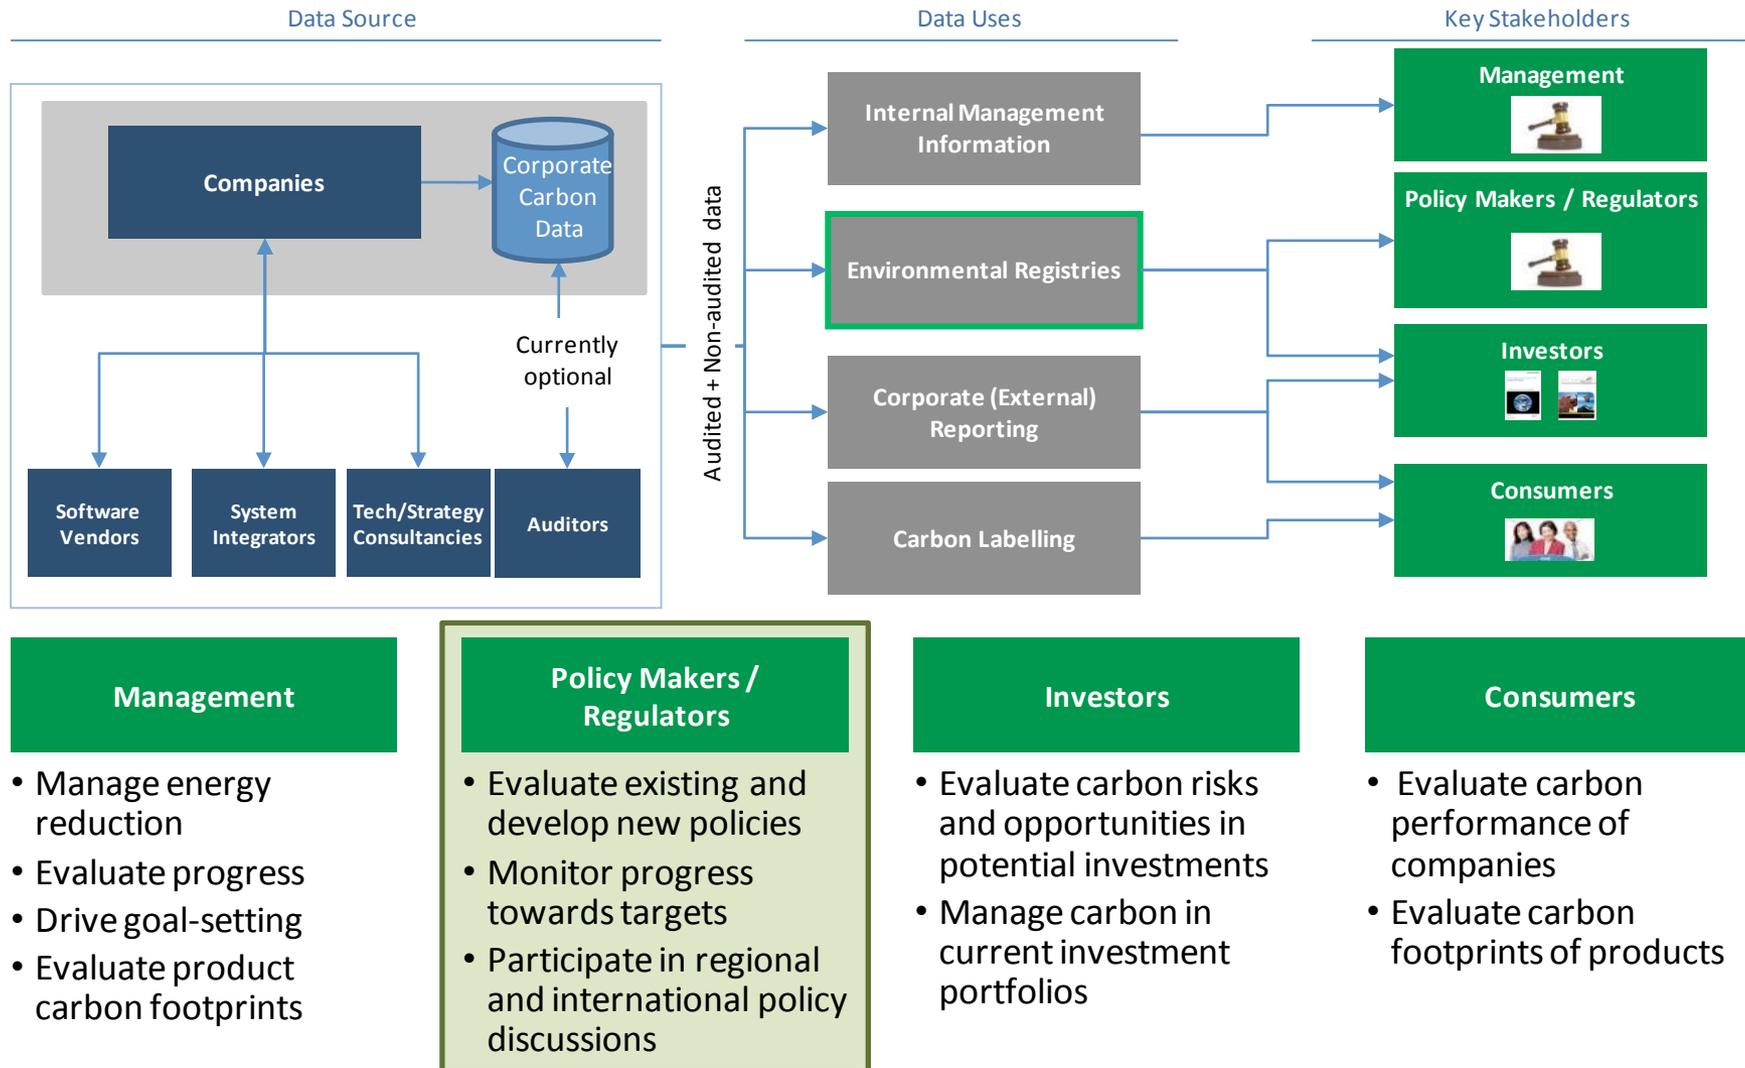

To support upcoming global legislation carbon registries will be required and several geographies lead the way in potential registry development or enhancements.

- Key:**
- Policy Milestones
 - Legislation Milestones
 - Proposed or possible regulation
 - 1st Generation Registry
 - 2nd Generation Registry
 - 3rd Generation Registry

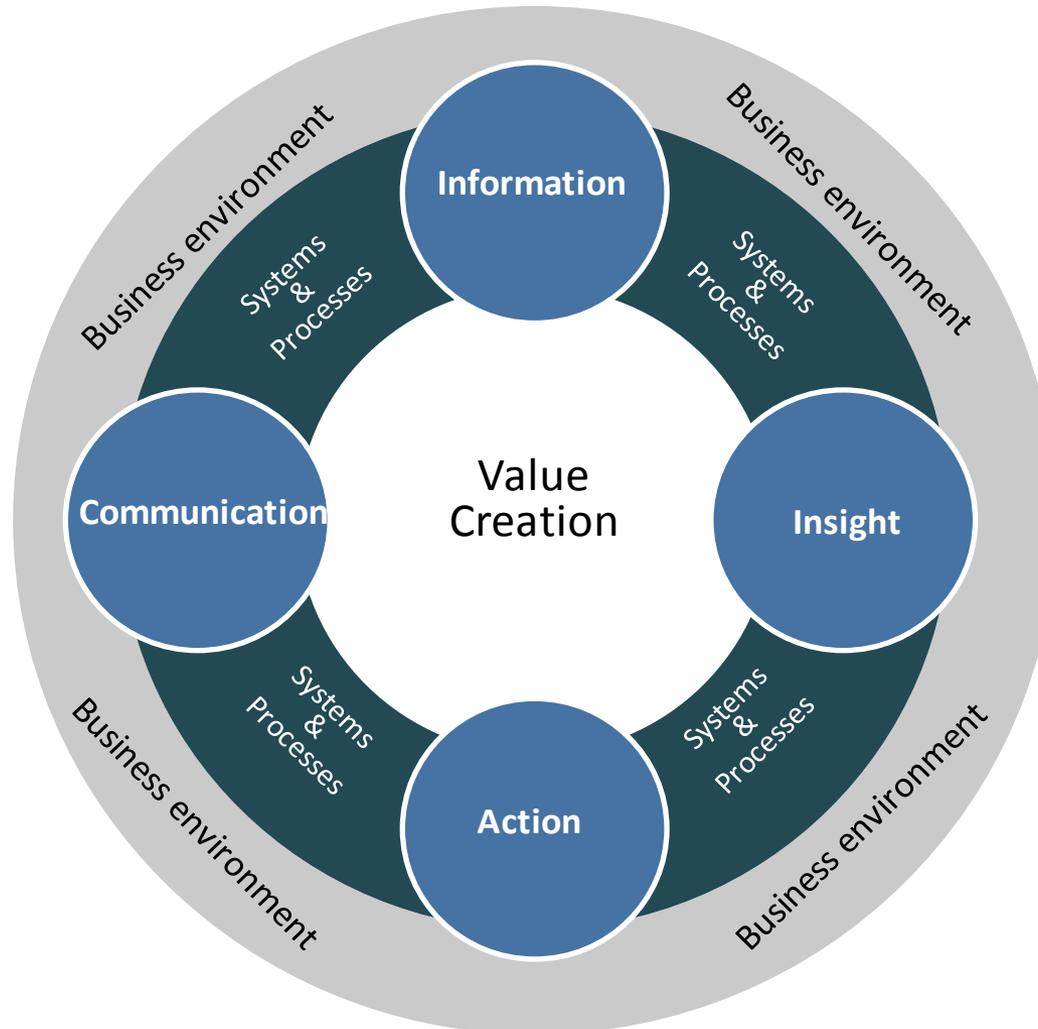

Carbon Disclosure Ecosystem: A diverse network of stakeholders, each with an interest in corporate GhG data and requiring increased complexity of carbon data systems

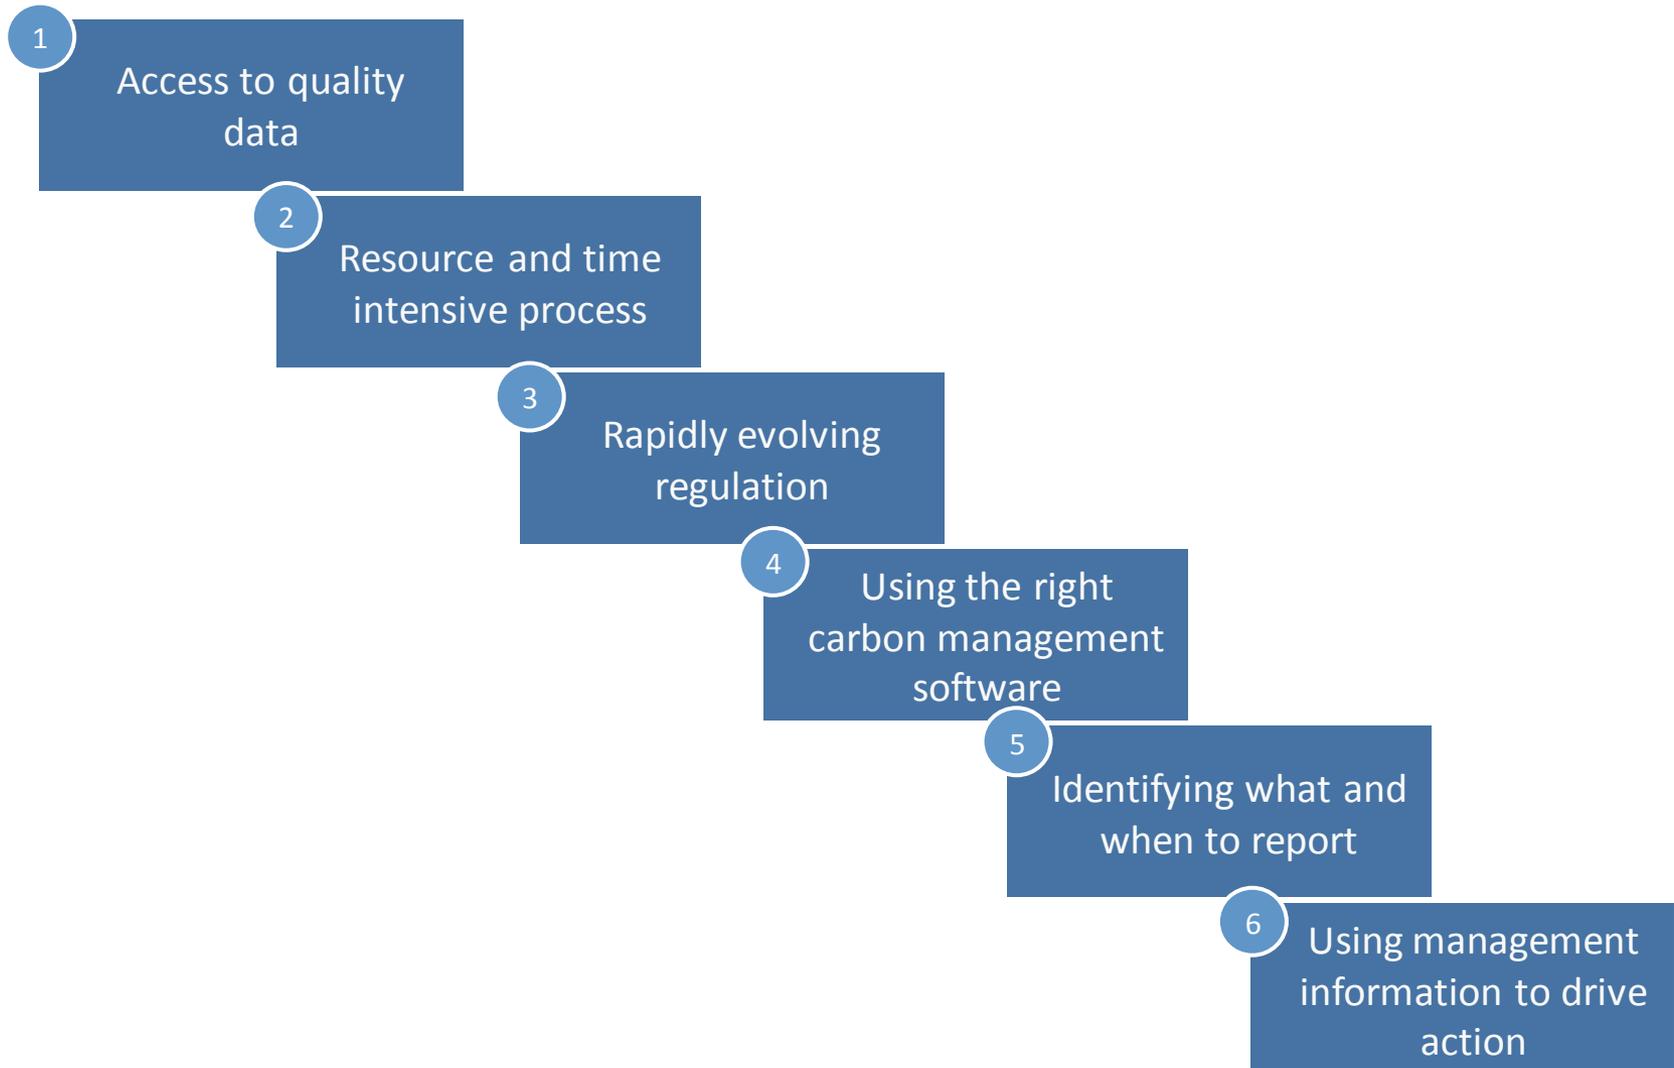

Accenture has worked with leading organizations to implement its Carbon Performance Management Framework and has applied this knowledge to its Carbon Registry designs

Accenture's Carbon Performance Management Framework

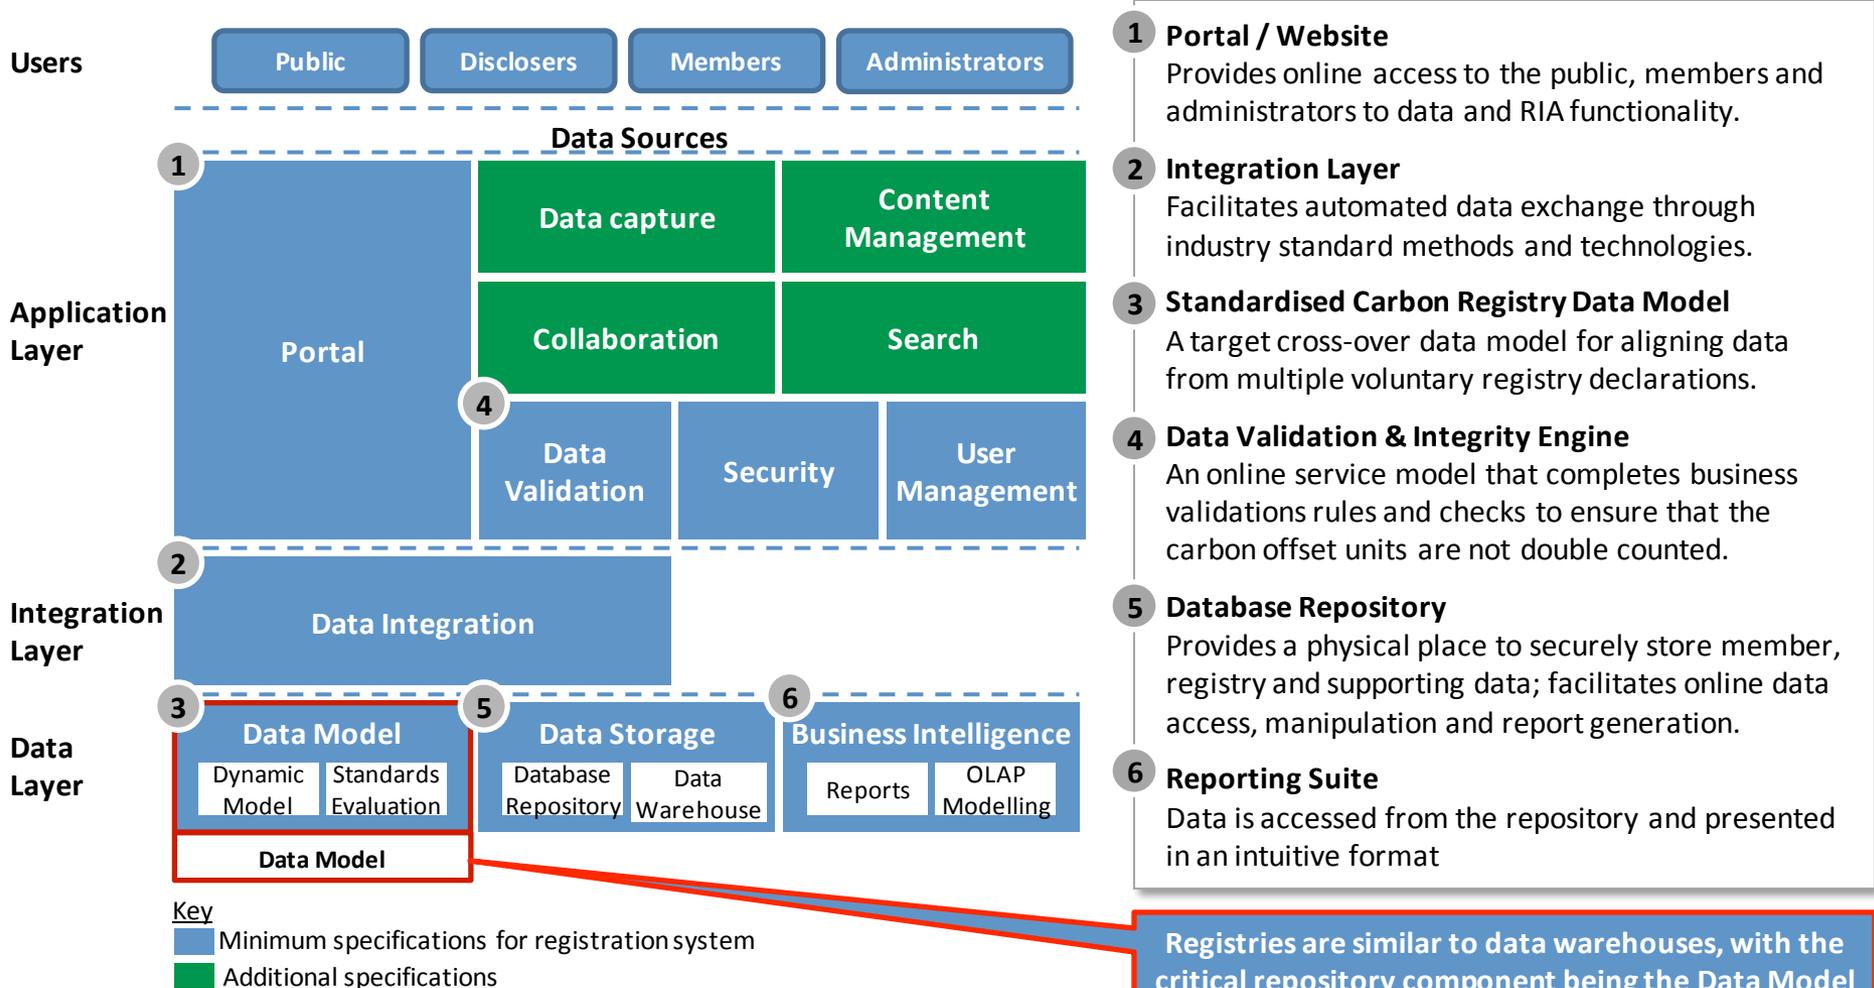

Accenture has identified the biggest challenges organizations face in optimizing their carbon performance

There are six features of a registry that streamline and enhance organizational carbon performance reporting

The key component of an Environmental Registration System is the data model. The rules and processes governing the data model provide layers of complexity.

The Carbon Disclosure Project (CDP) is the global leader in providing corporate GhG performance information

In February 2010, the CDP launched a new, integrated reporting platform that transforms the collection, management and dissemination of regulatory and carbon emissions data for investment and regulatory purposes. The new platform will...

The screenshot shows the Carbon Disclosure Project website homepage. At the top, there is a navigation bar with the CDP logo and a 'Sign In' link. Below the navigation bar are tabs for 'Home', 'What We Do', 'Programs', 'How To Disclose', and 'Results'. The main content area features a large image of an iceberg with a quote from Bill Clinton: "The Carbon Disclosure Project is vital, and we've got to get everybody to participate in it." Below the quote is a section titled 'Latest News' with a link to 'More news' and a section titled 'Latest Results' with a link to 'More results'. At the bottom, there is an 'Announcements' section with a link to 'Carbon Disclosure Project Global Forum 2009'.

- Allow for the submission and analysis of **more granular, comparable data** to support decision making
- Provide **advanced integration and reporting capabilities** to enable easier sharing of data
- Facilitate growth of corporate carbon data management and **focus on actions required to reduce emissions**

CDP 2.0 Integrated Systems Overview

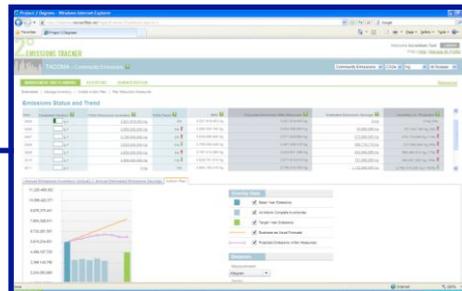

WEBSITE

- The world's window into carbon disclosure
- Entry point into the Carbon Disclosure Project
- Tightly integrated into all aspects and components of the CDP 2.0 Integrated Systems Project

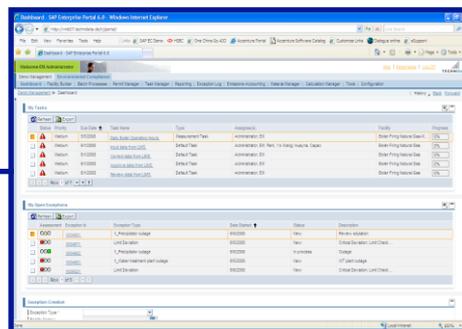

- Includes:
 - A refreshed visual design and complete CMS solution
 - Advanced search capabilities for site content, reports, responses and companies
 - A new member portal to provide self-service capabilities for users via integration to CRM and Repository
- New features such as multi-language capabilities, RSS feeds and Search Engine Optimisation

REPOSITORY

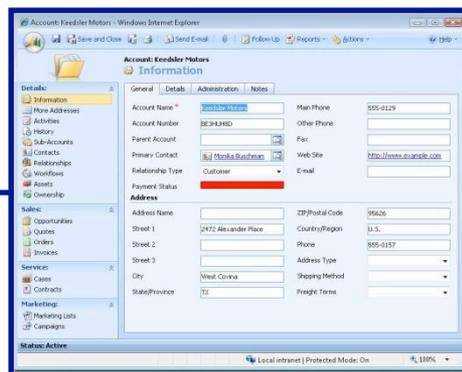

- Modular questionnaire for tailored disclosure
- Integrated with CRM to allow tightly coupled end-to-end disclosure processes
- GHG emissions calculator (post-February delivery)

REPORTING

- Data is accessed from the repository and presented in an intuitive format with flexible analysis capabilities
- Delivered by SAP Business Objects
- Reporting across all CDP disclosure data, including emissions scopes, sectors and geos, as well as pre-defined question-driven reports
- Reports accessible from CDP portal for subscribers

CUSTOMER RELATIONSHIP MANAGEMENT

- Centralised CRM system to support CDP customer and project management activities
- Includes advanced workflow capabilities to support business processes
- Out of the box Sales, Service and Marketing capabilities customised to CDP needs
- Integrated with Repository and Website to allow tightly coupled end-to-end disclosure processes
