SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (SCAQMD)

Annual Emission Reporting (AER) Program
April 16, 2015
Background

- Under AER Program:
  - ~ 2,000 facilities required to report their annual criteria and toxics emissions
  - pay emission fees in accordance with SCAQMD Rule 301(e) requirements
  - Consolidation of AB 2588 toxics emission inventory reporting requirements into the AER program (~ 177 toxics compounds)
  - Using SCAQMD New Web-Based Emission Reporting Tool
AER Program Overview

- Develop Inventory for both Criteria & Toxics
- Conduct Audits & De-aggregate Data
- Develop Area Source Inventory
- Help in AQMP Development-Stationary Sources Inventory (Point & Area Sources)
- Special Projects
- Collect $18 to $20 Millions in Emissions Fees
New Web-Based Reporting Tool

• Emission source basis
• No need for de-aggregation prior submittal to CARB
• No guess work (better data quality)
• Communicates with other District’s databases
• Useful for Engineering & Compliance, rules and planning staff
• Reduces staff time & resources
New Web-Based Reporting Tool (Cont.)

- Consists of five main sections
  1. Facility Information
  2. Build Reporting Structure
  4. Data Validation and Summaries
  5. Report Submission
AER Reporting Tool’s Features

- Ability to classify permitted and non-permitted emission sources,
- Option for GHG calculation (Tier 1 defaults),
- Intuitive in converting and displaying combustion fuel throughputs,
- All emissions (Criteria, TAC/ODC and GHGs) are displayed on the same screen,
- Built-in parameters for unique emission calculation methodologies,
AER Reporting Tool’s Features (Cont.)

- Import EPA TANK results,
- Upload supporting documentation
- Data sorting,
- User comment fields,
- Saving of partial data,
- Conversion calculator,
- References for summaries
Live Demo
The New 2014 AER Reporting Tool Demonstration
Welcome to South Coast AQMD Annual Emissions Reporting (AER)

About AQMD Annual Emissions Reporting (AER)

The South Coast Air Quality Management District’s (AQMD’s) Annual Emission Reporting (AER) program was developed to track emissions of air contaminants from permitted facilities. Emission fees are also assessed based on reported data. The data collected by AER is used to update the comprehensive emissions inventory for the AQMD, which includes Orange County, the non-desert portions of Los Angeles and San Bernardino counties, and the Riverside county areas west of the Palo Verde Valley.

This annual emissions inventory of pollutants and source categories is essential to effectively design and evaluate clean air strategies to comply with state and federal public health standards.

The AER is required for all facilities subject to Rule 301(e) and 301(i)(10). Additional information on the AER Program can be found at www.aqmd.gov/aer/aer.html

User Login

Password: 
Sign In

Forgot your username or password? Click here to reset your password.

New User? Complete a one-time registration process.

Register here

After establishing a user account, you can access and update the AERs for your facility(ies) using AQMD-assigned access pin codes.

Notice

All information entered on this computer system may be monitored, recorded, read, copied, and disclosed by and to authorized personnel for official purposes. Access or use of this computer system by any person, whether authorized or unauthorized, constitutes consent to these terms.
User Registration

Complete User Registration and click on **Sign Up**. You will receive an email to the registered address with a link that requires you to click to confirm your email and will automatically log you in.
Enter Facility ID & PIN

Once you are logged-in, the screen below will be displayed. To access a facility, enter Facility ID and the PIN code provided by AQMD.
Select Reporting Year

Click Open to access selected facility and start the reporting process.

Access Different Facility

Please enter a facility ID# and PIN code to access facility detail information. Alphanumeric PIN is issued by the SCAQMD to specific facility and must be typed exactly as presented.

If you need assistance on locating the PIN, please contact AER Support by email at aer@aqmd.gov or Hotline at (909)396-3660.

Facility ID:
Facility PIN:

Access Facility
The AER Tool has 4 main sections that have to be completed in the following order:

1. Facility Information
2. Build Reporting Structure
4. Summaries

These sections are accessible from a menu on the left, and from "Facility Home" page.
AER Report Overview

1) To start the reporting process, first provide general Facility Information in “Facility Information” section.

2) Next, specify the combustion fuels used at your facility and set-up emission sources in “Build Reporting Structure” section, prior to identifying your processes and reporting your emissions.

3) Then, proceed to “Report Process/Emissions” section to enter throughput data and calculate emissions for each device and process.

4) Finally, select “Summaries” to view emissions results and associated fees.
5) Run “Data Validation” and make sure there are no Errors
   - If errors displayed, click on the link provided to resolve errors
   - If warning displayed, click on the link provided to check the data entered

6) Upload supporting documentation if desired

7) Submit the report through “Report Submission”

8) Print Submittal forms (including Submittal Conformation) to be sent to AQMD
   - Sign Signature Sheet, attach other submittal forms and check for fee due (if any), and mail to AQMD
Facility Home Page

Click on Start Here button to start reporting.

Report Submission

Facility ID: 999921
Reporting Period: 2014

This is the Facility Home Page which specifies the main elements of the AER Program. For more information, please click on the Help Icon. The main AER elements are accessible from the menu on the left, and on this page by clicking on the section name below.

Import last year

Step 1) Facility Information
This section contains your facility’s general information such as business classification, location, and contact information. You can also inform AQMD about your business operating status changes.

Step 2) Build Reporting Structure
This section is for specifying combustion fuels used in your facility as well as identifying and/or adding emission sources for your facility to the pre-loaded facility permit profile.

Step 3) Report Process / Emissions
This section contains worksheets for reporting your processes, throughput (usage of materials/fuels), emission factors, and other activity data, and calculating emissions for all emissions sources identified in “Set up Reporting Structure”.

Step 4) Summaries
This section allows you to review the resulting emissions from your facility’s permitted and non-permitted emission sources. This section also includes detailed report on all fees and amount due.
Facility Home Page (cont.)

Or click on “Import Last year” link to import most of the data if you used this tool last year.

Facility ID: 999921

Facility Information

General Information

Facility ID: 999921
Reporting Year: 2014
RECLAIM: Yes
RECLAIM Designation: RIN
Title V: Yes
AB2588: Yes
- AB2588 Phase: 1A
- AB2588 Reporting Year: No

County: LOS ANGELES
Air Basin: SOUTH COAST

Latitude
Longitude
Click on Save, then Next and continue until you have completed all sections of “Facility Information” including “Status Update”.
The Next button on “Status Update” page will take you to “Combustion Fuels” in “Build Reporting Structure”
Select all combustion fuels used in your facility on this screen. To add a fuel, click on Add New Fuel.

---

**Combustion Fuels Specification**

Specify all the combustion fuels (fuels being burned) used in your facility during the reporting year (do not include fuels used exclusively in vehicles).

<table>
<thead>
<tr>
<th>Action</th>

<td>91.00</td>
<td>YES</td>
<td></td>
</tr>
</tbody>
</table>
Adding Combustion Fuel
The New AER reporting system is based on “Device” level as Emission Source (ES):

- For example: A permitted unit (1 A/N) consisting of a dryer and a printing press has to be reported as 2 devices (2 ES).

- List of permits and if available devices will be preloaded for each facility. If list of devices is not available in the AQMD database, the user has to enter the devices (if permitted appropriate permit and application number).
Emission Sources (ES)

This screen displays a list of Application Numbers, and Devices if available from AQMD permitting Database. Each device has been assigned Emission Source (ES) ID.

To add a new Emission Source, Click on Add New Emission Source.
To define each pre-loaded Emission Source Click on Open
ES Cont.

Provide a Name for the ES. Then select “ES Status” to specify the operating status. Click on Categorize Emission Source (See Next Slide).
Click on the applicable Emission Source Group Type for each ES and select the applicable equipment type then **Save**.
To choose to define all Emission Sources prior to reporting emissions (Navigation path #1), click on Save and Return to List of Emission Sources.

<table>
<thead>
<tr>
<th>Field</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Permit</td>
<td>Yes</td>
</tr>
<tr>
<td>A/N</td>

<td>Normal Operation</td>
</tr>
<tr>
<td>Emission Source Category</td>
<td>External Combustion</td>
</tr>
<tr>
<td>Design Capacity</td>
<td>8.00 (MILLION BTU PER HOUR)</td>
</tr>
</tbody>
</table>

To save and return to the list of emission sources, click on the button: **Save and return to List of Emission Sources**.
Based on the Information provided in previous 2 screens, the application will populate the overview table to initiate the reporting process on the emissions worksheets. You can either continue defining the rest of your emission sources or …
If you choose to report your process emissions immediately after defining each ES (Navigation path #2), click on "Save and Proceed to Process Reporting."
ES Cont.

Click to open the initiated Process to Report Emissions (see next slide)
Switch from ES to Process

### External Combustion

Please provide specific information for every process associated with your external combustion Emission Sources including usage, emission factor and control efficiency (if any). You must select Fuel and throughput units before reporting emissions. Detailed instructions are available by clicking on Help icon in the tool bar.

#### Step 1: Process

<table>

</tr>
</thead>
</table>
Access Emissions Worksheets

Click on “Report Process/Emissions” to see a list of all worksheets that were assigned based on information provided on Emission Sources section.

Click on the worksheet you want to work on. If you click on Internal Combustion...

(see next slide)
Internal Combustion Process List

By clicking on each worksheet name, a list of all processes for the worksheet will be displayed.

South Coast
Air Quality Management District

Click “Open” to open the Process you want to work on.
Worksheet Organization

Each worksheet has the following that need to be completed in this order:

1) First Complete the Process (select fuel or activity or material type),
2) Enter fuel usage or throughput and specify units,
3) For combustion worksheets, toxic defaults are automatically assigned (after you select fuel type). For criteria and GHG defaults, you have to click on “Use Default Emission Factors…”
4) For other worksheets, select pollutant and enter Emission Factor and Emission Factor Data Source
5) Emissions will be calculated and displayed for each process.
6) Review Summaries in summary tables
Worksheet Main Sections

Step 1) Process Info: Click Open to complete

Step 2) Throughput Info: Click Open to complete

Step 3) Default Emission Factors will assign criteria and GHG defaults (if available)
Process Information

The drop list consists of the fuels listed in the Combustion Fuels section. Select fuel type before you proceed (fuel type determines corresponding throughput units and assigns default EFs).
You have to list throughput and throughput units, then save. Application will automatically convert throughput to units needed to calculate criteria and GHG emissions.

You can also provide optional data.
Using Criteria & GHG Defaults

Click on Default Emission Factors to populate criteria and GHG defaults, if available.
To enter specific EF, select pollutant, un-check Use Default, enter specific EF value and select Emissions Factor Data Source. The other data fields are optional.

Emissions are automatically calculated and transferred to summaries.
Choose Different Worksheets

Select different worksheet from the left menu. To select process, click on Open.
General Worksheet Approach

Step 1) Process info: Click Open to complete

Step 2) Throughput info: Click Open to complete

Step 3) Emissions: Click Add New to select pollutant or TAC and complete. For example: select VOC for pollutant and enter data for VOC
Entering VOC Data

Select pollutant, enter EF, EF Data Source, and Overall Control Efficiency, if any. Emissions will be automatically calculated and transferred.
