DATE: November 1, 1982

SUBJECT: Errata Sheet - Petroleum Dry Cleaning Control
Techniques Guideline Document

FROM: Jack R. Farmer, Chief
Chemicals and Petroleum Branch, ESED (MD-13)

TO: Directors, Air and Waste Management Divisions
Regions I – X

The copy of the control techniques guideline document, "Control of Volatile Organic Compound Emissions from Large Petroleum Dry Cleaners," (EPA-450/3-82-009) that was sent to you contained a typographical error (see Attachment).

The document you received incorrectly states that petroleum solvents are used to clean 70 percent of the total clothes cleaned by the commercial sector of the dry cleaning industry. The document should have stated that they only represent 25 percent. This error does not change the technical information or economic and environmental impacts in this document.

I hope this error has not caused you any inconvenience.

ERRATA SHEET

Document: "Control of Volatile Organic Compound Emissions from Large Petroleum Dry Cleaners," Guideline Series, EPA-450/3-82-009, September 1982.

Error: Second sentence in the second paragraph of Section 2.1, Industry Description, Chapter 2 should read:

Petroleum dry cleaning services are offered only by the commercial and industrial sectors of the industry, and represent about 25 and 30 percent, respectively, of the total clothes throughput for these industry sectors (Fisher, 1980b; Sluizer, 1981).
