

## **Training Courses for 2010 AQS Conference**

The “**AQS Introductory Course for new users – Retrievals**” class is designed for new users, primarily those who will be submitting data to AQS. It is **Part One** of a full 2-day class focused on retrieving data from AQS and includes hands-on exercises. Class size is limited to 40 people. Please do not register for this class if you have previously attended it. We expect that most people will sign up for both the retrieval and load parts of the introductory course. Taking both parts of this course over 2 days is the best way for inexperienced AQS users to become familiar with the system.

The “**AQS Introductory Course for new users – Load**” class is designed for new users, primarily those who will be submitting data to AQS. It is **Part Two** of a full 2-day class focused on submitting data to AQS and also includes hands-on exercises. Class size is limited to 40 people. Please do not register for this class if you have previously attended it. We expect that most people will sign up for both the retrieval and load parts of the introductory course. Taking both parts of this course over 2 days is the best way for inexperienced AQS users to become familiar with the system.

“**Using Web Discoverer with AQS for new users**” shows how to use the Discoverer web tool from Oracle Corporation to perform ad hoc queries of the AQS database. You will learn how to connect to Discoverer and how to use it to retrieve AQS data, including raw data. If you've taken an "Intro to Discoverer" session before but have not been using the tool, feel free to register for this session. This same session is offered twice. Class size is limited to 40 people.

“**Using Web Discoverer with AQS – Advanced**” will provide additional hands-on Discoverer training, showing you ways to perform more involved retrievals that you will find beneficial in your day-to-day data needs. Come with a suggested retrieval need to see how it can be accomplished. Tips for optimizing retrievals will also be discussed. Familiarity with Discoverer and the AQS end user layer will help you get the most out of this course. Class size is limited to 40 people.

“**AQS Precision & Accuracy**” is a hands-on training session to show you how to use the Air Quality System Precision & Accuracy Generator (AQSP&A) to create AQS data input transactions for precision and accuracy data. This same session is offered twice. Class size is limited to 40 people.
