

AQS will NOT be available from Saturday, 1/15/11, 7 am ET to Sunday, 1/16/11, 5pm ET. We regret any inconvenience.

The "AQS Technical Note – NAAQS Reporting Issues for NO₂ and SO₂, NCore Reporting Issues for NO_y and trace-level gases - November 3, 2010" stated that the standard units for NO₂ and SO₂ had changed from ppm to ppb. To be consistent, the standard units for NO₂ and SO₂ related parameters will also be changed from ppm to ppb, and it is the conversion for these parameters that will take place this weekend.

- Standard units for the following will now be ppb (code 008):
 - Reactive oxides of nitrogen (NO_y) - 42600
 - Nitric oxide (NO) - 42601
 - Oxides of nitrogen (NO_x) - 42603
 - SO₂ max 5-min avg - 42406

The summaries (Daily, Quarterly and Annual) for these will also be recomputed.

Regards,
