Subject: AQS patches deployed April 7 & 8, 2010

AQS Users -

Fixes were deployed for the following two bugs noticed after the March 15 implementation:

1) Unintentional loss of certification when a reported value had not changed.

This fix was deployed on April 7, 2010. Certification should be lost if, and only if, the reported sample value is changed.

2) Standard values for PM10 data had not been recomputed to use truncation instead of rounding.

This fix was deployed on April 8, 2010. Standard values for PM10 were recomputed using truncation, not rounding.
