

The background of the slide is a blue gradient with a large, faint, circular logo of the United States Environmental Protection Agency (EPA) centered behind the text. The logo features a stylized flower with three leaves and a central stem, surrounded by the words "UNITED STATES ENVIRONMENTAL PROTECTION AGENCY" in a circular arrangement.

***Advancing the Science of Air  
Monitoring:  
Research Priorities and New Approaches for  
Enhancing Monitoring Data***

Tim Watkins

National Exposure Research Laboratory  
Office of Research and Development

National Ambient Air Monitoring Conference  
November 9, 2006

# *Presentation Overview*

- Monitoring Objectives and Research Priorities
- Monitoring Research in EPA's Office of Research and Development (ORD)
- Approaches for Enhancing Ambient Monitoring

# Monitoring for Multiple Objectives

Monitoring Purpose	Measurements Needed
Compliance with NAAQS	FRM / FEM
Public Information/Reporting	Continuous / real time measurements
Air Quality Management Activities <ul style="list-style-type: none"> <li>- Development of Emission Reduction Strategies</li> <li>- Evaluation of Emission Reduction Strategies</li> <li>- Air Quality Trends</li> </ul>	Continuous / semi-continuous sampling
	PM Speciation
	Precursor species
	Air Toxics
Research/Scientific Studies <ul style="list-style-type: none"> <li>- Health Assessments</li> <li>- Ecological Assessment</li> <li>- Source-Receptor Relationships</li> <li>- Model Development and Evaluation</li> </ul>	Continuous / semi-continuous sampling
	PM Speciation
	Precursor species and co-pollutants
	Air Toxics
	Deposition

# *Monitoring Priorities to Support EPA Programs*

- NAAQS Development
  - PM Size Fractions
    - Coarse and Ultrafine
  - PM Speciation / Components
- NAAQS Implementation
  - FRM / FEM
  - Emission Reduction Strategies Development
  - Accountability
- Public Reporting
  - AirNOW and AQI
- National Ambient Air Monitoring Strategy (Dec 05 Draft)
  - Continuous Measurements
  - Multipollutant Measurements (NCORE Sites)
  - Increased integration with Science Objectives
  - Integration of Air Toxics into monitoring networks
  - Ecological Assessment

# *Monitoring Priorities from External Recommendations: National Research Council Reports*

- Research Priorities for Airborne Particulate Matter IV (2004)
  - Challenge - Enhancing Air Quality Monitoring for Research
  - Move from a focus on compliance with NAAQS toward multiple monitoring purposes
    - Continuous / semi-continuous measurements
    - PM species
  - The report specifically mentions the need to measure ultrafine PM, soluble metals, and organic species.
- Air Quality Management in the US (2004)
  - Recommendation – Enhance Air Pollution Monitoring
  - Expanded to other important objectives beyond compliance
  - Use of semi-continuous methods
  - Develop more reliable methods and analytical procedures for chemical composition of PM

# ***Monitoring Priorities from External Recommendations: NARSTO PM Assessment (2004)***

- Improve integration of atmospheric and health sciences to understand relationships between PM and public health impacts.
  - “Health impacts based on epidemiological studies can only be derived for PM characteristics for which ambient measurements are available.”
- Improve the understanding of carbonaceous aerosols
  - Chemical speciation
  - Spatial and temporal resolution
  - Composition
- Develop methods to identify important markers or tracer species to relate ambient concentrations to sources.
- Replace integrated measurements with continuous, real-time measurements for PM mass and composition, where feasible and as technology evolves.

The background of the slide is a blue-tinted version of the official seal of the United States Environmental Protection Agency (EPA). The seal features a central globe with a sun rising over it, flanked by two olive branches. The words "ENVIRONMENTAL PROTECTION AGENCY" are written in a circular path around the globe, and "U.S." is at the top.

***Monitoring Research in EPA's  
Office of Research Development  
(ORD)***

# *ORD Monitoring Research*

- Methods Development and Evaluation
- Source Apportionment Applications
- Exposure Assessment Applications
- Health Effects Applications

# *ORD's Monitoring Research Program: Methods Development and Evaluation*

- Sampling Methods
  - Coarse particles
  - Semi-continuous PM species
  - Air Toxics
    - Acrolein and 1,3 butadiene
    - Mercury dry deposition
- Analytical Methods
  - Inorganic and Organic Source marker compounds
- Research Grants
  - Carbonaceous PM
  - Source Apportionment
  - Continuous PM
- PM Supersites

# *ORD's Monitoring Research Program: Source Apportionment and Exposure Applications*

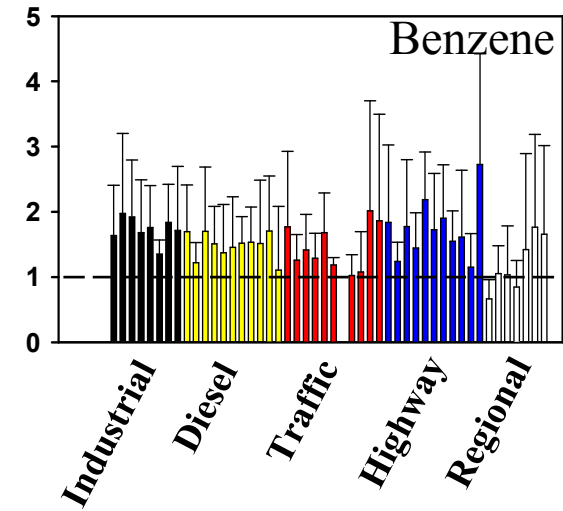

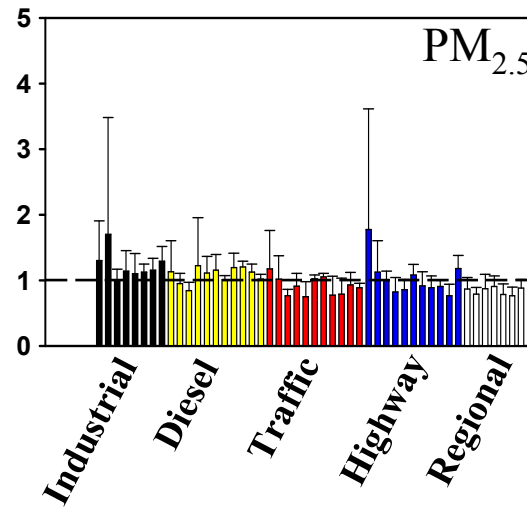

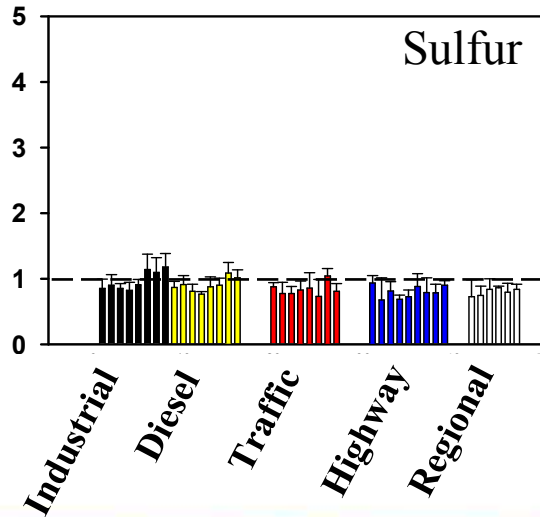

- Detroit Exposure and Aerosol Research Study (DEARS)
  - PM Components and Size Fractions
  - Air Toxics
- Steubenville Source Apportionment Study
  - Integrated and Continuous PM
  - Continuous Criteria Gases
  - Deposition
  - Ambient Mercury Speciation
- Coarse PM Methods Evaluation
  - FRM / FEM
  - Continuous Methods
  - Saturation Samplers
- Near Roadway Exposures
  - PM Composition and Size Fractions
  - Mobile Source Air Toxics

# Preliminary DEARS Results

(Concentration Ratios – Outdoor Residential to Community Central Site)

Increased Variability

RESEARCH & DEVELOPMENT

Building a scientific foundation for sound environmental decisions

## Steubenville PMF Apportionment Results 2003 & 2004

# “Data Fusion”

- Combining monitoring data with other sources of air quality data (e.g., modeled output, satellite) to generate air quality surfaces
  - Capitalize on the strengths of monitoring data (“true” measure) and modeling data (spatial and temporal coverage)
  - Minimize weaknesses of each data source

## Data Fusion Example – PM Concentrations in NE US (Feb 14, 2001)

**Data fusion results:**  
Spatially and temporally  
resolved surface enhanced  
with ground truth data  
from monitors

RESEARCH & DEVELOPMENT

*Building a scientific foundation for sound environmental decisions*

# Summary

- Enhanced monitoring for multiple objectives
- Monitoring Priorities include
  - Continuous methods
  - PM species and size fractions
  - Air toxics
  - Increased integration with science objectives
- ORD Monitoring Research
  - Methods Development and Evaluation
  - Source Apportionment, Exposure, and Health Applications
- Approaches are emerging to enhance, not replace, ambient monitoring
  - Satellites
  - Data Fusion

The background of the slide is a large, faded blue seal of the United States Environmental Protection Agency. The seal features a central emblem with a globe and a leaf, surrounded by the text "UNITED STATES ENVIRONMENTAL PROTECTION AGENCY".
