NPAP Reporting History for AIRS Sites

This list was compiled 05/12/2005 and printed 05/17/2005.

There were 25769 "good" AIRS codes out of 29927 data sets checked (86.11% valid). The valid sites plus other "possible" AIRS sites for a total of 26524 audit data sets were evaluated in preparing this list. The data sets are from 4179 unique site codes. This probably represents fewer actual sites due to the change in site codes from SAROAD to AIRS and errors in the number itself. Likewise, there are 5987 unique pollutant-site-code combinations (monitors), and 21452 unique pollutant-site-audit-year combinations. This means that 8475 "duplicate" data sets were reported -- cases where two or more audits for the same pollutant at the same site were reported in the same year. This would include co-located samplers and HiVol/SSI audits at the same site two times in the same year. To gain data capture 1164 data sets were manually checked.
