

RACT/BACT/LAER CLEARINGHOUSE CLEAN AIR TECHNOLOGY CENTER ANNUAL REPORT FOR 2001

Developed as Part of a Joint Effort Between the
U.S. Environmental Protection Agency's
Clean Air Technology Center (CATC) and
State and Local Air Pollution Control Agencies

RACT/BACT/LAER CLEARINGHOUSE (RBLC)

CLEAN AIR TECHNOLOGY CENTER

ANNUAL REPORT FOR 2001

Prepared by:

CLEAN AIR TECHNOLOGY CENTER
INFORMATION TRANSFER AND PROGRAM INTEGRATION DIVISION
OFFICE OF AIR QUALITY PLANNING AND STANDARDS
U.S. ENVIRONMENTAL PROTECTION AGENCY
RESEARCH TRIANGLE PARK, NORTH CAROLINA, 27711

February, 2001

DISCLAIMER

This report has been reviewed by the Information Transfer and Program Integration Division of the Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency and approved for publication. Approval does not signify that the contents reflect the views and policies of the U.S. Environmental Protection Agency. Mention of trade names or commercial products is not intended to constitute endorsement or recommendation for use. Copies of this report are available from the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161, telephone (800) 553-6847.

ACCESSING THE RBLC WEB

The RACT/BACT/LAER Clearinghouse (RBLC) maintains an on-line data base (RBLC Web) of all control technology determinations that have been submitted to it. The RBLC Web and other related information are available at the Internet address listed below. Detailed instructions about how to access the RBLC are contained in the RBLC User's Manual.

World Wide Web (WWW)

<http://www.epa.gov/ttn/catc/>

The RBLC can be reached by clicking the appropriate icon on the CATC home page.

The RBLC Web site lets you access all of the information in the Clearinghouse with your Web browser. To access the online data entry portion of the RBLC, you must be an authorized permit agency editor. Contact the Clean Air Technology Center (CATC) Information Line at (919) 541-0800 for information on gaining authorization for online data entry. Data can also be entered off-line by using the RBLC Standalone Editor, a computer program that you can run on your personal computer. The RBLC Standalone Editor can be downloaded from the RBLC Web. It simulates data entry on the RBLC Web and generates a file that can be sent to the RBLC by E-mail or on a floppy disk. Call the CATC Information line for more information.

ACKNOWLEDGMENT

This project would not have been possible without the cooperation of the many State and local air pollution control agencies and EPA Regional Offices who submitted the necessary technical information. A list of all Regional offices and State and local agency RBLC contacts is provided in Appendix D.

Special thanks are given to Mr. William Becker, Executive Secretary for the State and Territorial Air Pollution Program Administrators/Association of Local Air Pollution Control Officials (STAPPA/ALAPCO), Mr. Robert Hodanbosi from the Ohio EPA and Mr. William O'Sullivan from the New Jersey Department of Environmental Protection representing STAPPA, Wendy Barrott from the Wayne County Department of the Environment (Detroit, MI) and John A. Paul from the Regional Air Pollution Control Agency (Dayton, OH) representing ALAPCO, and other State, local, and EPA Regional Office representatives who have provided comments and overall support for the RACT/BACT/LAER Clearinghouse.

INTRODUCTION

This RBLC annual report contains information on the 320 permits entered and modified into the Clearinghouse from January 2001 to December 2001 and provides an overview of data entry activity over the last five years. It summarizes this activity in terms of EPA Regions, States, and industrial processes; discusses trends over the past five years; and presents plans for additions and improvements to the clearinghouse. More detailed information is contained in the appendices.

- C Appendix A - About the RBLC: The regulatory background and history of the programs served by the RBLC, the purpose of RBLC, and a summary of the most recent changes to the clearinghouse
- C Appendix B - RBLC Process code/Name list
- C Appendix C - Data Entry Information: A review of the options for data entry and an RBLC Input form with instructions
- C Appendix D - Index of RBLC State and Local Contacts
- C Appendix E - Index of Control Technology Determinations Sorted by EPA Region and State: A summary listing of the determinations added or updated over the last five years. Information includes the name of the company, permit date, process type code, process description, and RBLC ID number as a reference for additional information. A '*' next to the entry indicates that the determination is in the Transient/Early Notification Data Base and may not be complete.
- Appendix F - Index of Control Technology Determinations Sorted by Facility Name: A summary listing of the determinations added or updated over the last five years. Information includes the date the permit was issued (estimated or actual), process type code and description, and a RBLC ID number (which indicates the State where each facility is located) for locating the more detailed facility information contained in the RBLC Web. Also included is a notation to indicate the year a determination was entered into the Clearinghouse. A '*' next to the entry indicates that the determination is in the Transient/Early Notification Data Base and may not be complete.
- Appendix G - Index of Control Technology Determinations Sorted by Process Type: A summary listing for all determinations entered or updated over the last five years. Information includes the name of the company, the State where the source is located, the agency issuing the permit, name of person to contact within the agency for additional information, and a telephone number. Also included is a notation to indicate the year a determination was entered into the Clearinghouse. A '*' next to the entry indicates that the determination is in the Transient/Early

Notification Data Base and may not be complete. Each entry in Appendix G has a RBLC ID number for locating the more detailed facility information on the RBLC Web.

Previous versions of this annual report have provided extensive tables with listings of individual determinations entered in the report year. This information is now easily available through the RBLC Web and its query and reporting functions. Interested readers can browse the data base on-line for additional details.

NATIONAL SUMMARY OF RBLC ACTIVITY

The data entered into the RBLC are provided by State and local agencies. Submittals represent these agencies' permitting and reporting efforts for major new sources and modifications to existing major sources. Submittals to the RBLC are, for the most part, voluntary. Only LAER determinations must be submitted to the RBLC (section 173(d), Clean Air Act).

The year 2001's activity shows an increase in the number of submittals from those in 2000. The yearly totals for determinations entered into the RBLC for the years 1997 through 2001 are shown in Figure 1. Figure 2 shows each region's contribution over the five-year period and for the year 2001. Table 1 breaks down these entries by EPA Region and year for the five-year period.

Region 4 surpassed Region 9 in 2001 as the highest contributor for the five-year period by adding 52 new determinations. Regions 10 and 2 remain the lowest contributors. Region 10 submitted one determination and Region 2 submitted no new entries for 2001. The RBLC did visit Regions 2 and 10 late in 2001 and did collect information on a significant number of new permits. However these permits will not be entered into the RBLC data base until 2002. Region 5, with a contribution of 138 determinations, provided the largest number of entries for 2001. A review of the contributions for the individual regions is presented in the next section.

Figure 1 - Number of Determinations Entered Per Year (1997-2001)

TABLE 1. Determinations Entered by Region 1997 - 2001

YEAR	EPA REGION										TOTAL
	1	2	3	4	5	6	7	8	9	10	
1997	25	1	5	25	7	24	39	3	38	1	168
1998	4	13	8	15	12	12	2	30	60	3	159
1999	17	3	2	23	25	10	6	27	47	3	163
2000	1	0	13	128	14	13	5	11	64	8	257
2001	37	0	15	52	138	33	24	18	2	1	320
TOTAL	84	17	43	243	196	92	76	89	211	16	1067

EPA Regions:

Region 1 - Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Region 2 - New Jersey, New York, Puerto Rico and the U.S. Virgin Islands.

Region 3 - Delaware, Maryland, Pennsylvania, Virginia, West Virginia, and the District of Columbia.

Region 4 - Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.

Region 5 - Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

Region 6 - Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

Region 7 - Iowa, Kansas, Missouri, and Nebraska.

Region 8 - Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

Region 9 - Arizona, California, Hawaii, Nevada, and Pacific Islands and Tribal Nations subject to US law.

Region 10 - Alaska, Idaho, Oregon, and Washington.

Figure 2 - Number of Determinations Per Region (1997 - 2001)

REGIONAL SUMMARY OF RBLC ACTIVITY

The determinations entered by each EPA Region in the years 1997 through 2001 were presented and discussed in Table 1. This section will discuss each region's contribution in more detail.

EPA REGION 1

Thirty-seven determinations were added to the RBLC from EPA Region 1 in 2001. In the four previous years, 1997 through 2000, 47 determinations were entered, from Connecticut, Maine, Massachusetts and Rhode Island. Figure 3 shows the proportional contribution from each of the Region 1 States. It should be noted that both New Hampshire and Vermont entered new determinations in 2001 after having no new entries during the previous five-year period.

Figure 3 - Number of Determinations Ordered by State in Region 1 (1997 - 2001)

EPA REGION 2

No determinations were added to the RBLC from EPA Region 2 in 2001. The RBLC did visit Region 2 and State agencies in New York and New Jersey in late 2001. Information on a significant number of new permits was collected and will be added to the RBLC in 2002. Prior to this visit, the most recent determination to be submitted by the Region came in 1999. In the four previous years, 1997 through 2000, 17 determinations were entered, with 13 entries from New Jersey. The remainder were entered by New York and Puerto Rico. The U.S. Virgin Islands have submitted no new determinations and were not included in Figure 4. Figure 4 shows the proportional contribution from each of these States.

Figure 4 - Number of Determinations Ordered by State in Region 2 (1997 - 2001)

EPA REGION 3

Fifteen determinations were added to the RBLC from EPA Region 3 in 2001. In the four previous years, 1997 through 2000, 28 determinations were entered. All of the States except Delaware and Maryland contributed at least one determination in 2001. Pennsylvania and Virginia contributed all but one of the submittals with eight and six, respectively. No determinations were entered by Washington, D.C. Figure 5 shows the proportional entries by State for 2001 and the years 1997 through 2000, respectively.

Figure 5 - Number of Determinations Ordered by State in Region 3 (1997 - 2001)

EPA REGION 4

Fifty-two determinations were added to the RBLC from EPA Region 4 in 2001, bringing the total over the five-year period to 243. No other region has entered as many new determinations. In the four previous years, 1997 through 2000, 191 determinations were entered, with two-thirds of those being entered from Alabama and Florida. Florida entered 29 determinations in 2001 and now has submitted more than any other State in the Region. Figure 6 shows the proportional entries by State for 2001 and the years 1997 through 2000, respectively.

Figure 6 - Number of Determinations Ordered by State for Region 4 (1997 - 2001)

EPA REGION 5

One hundred thirty-eight determinations were added to the RBLC from EPA Region 5 in 2001. In the four previous years, 1997 through 2000, 58 determinations were entered. Wisconsin, the smallest contributor with one determination entered in the years 1997 through 2000, entered 60 percent of all determinations submitted from the Region during 2001 with 84 and is now the highest five-year contributor for the Region. Figure 7 shows the proportional entries by State for 2001 and the years 1997 through 2000, respectively.

Figure 7 - Number of Determinations Ordered by State for Region 5 (1997 - 2001)

EPA REGION 6

Thirty-three determinations were added to the RBLC from EPA Region 6 in 2001. In the four previous years, 1997 through 2000, 59 determinations were entered. Louisiana and Arkansas were the largest contributors for the five year period, with 29 and 28 determinations, respectively. After only one new determination from 1997 to 2000, Oklahoma surged with 19 in 2001. Texas remains at the bottom with only one determination submitted since 1997. Figure 8 shows the proportional entries by State for 2001 and the years 1997 through 2000, respectively.

Figure 8 - Number of Determinations Ordered by State for Region 6 (1997 - 2001)

EPA REGION 7

Twenty-four determinations were added to the RBLC from EPA Region 7 in 2001. In the four previous years, 1997 through 2000, 52 determinations were entered, 40 of which were determinations from Missouri. Submittals from the Region were spread evenly over the States for 2001. Figure 9 shows the proportional entries by State for 2001 and the years 1997 through 2000, respectively.

Figure 9 - Number of Determinations Ordered by State for Region 7 (1997 - 2001)

EPA REGION 8

Eighteen determinations were added to the RBLC from EPA Region 8 in 2001. Colorado surpassed Wyoming as the highest five-year contributor during 2001 by submitting nine new determinations. In the four previous years, 1997 through 2000, 71 determinations were entered, with Wyoming, Montana and Colorado being the largest contributors. South Dakota entered one determination in 2001, bringing the five-year total to two. Figure 10 shows the proportional entries by State for 2001 and the years 1997 through 2000, respectively.

Figure 10 - Number of Determinations Ordered by State for Region 8 (1997 - 2001)

EPA REGION 9

Two determinations were added to the RBLC from EPA Region 9 in 2001. In the four previous years, 1997 through 2000, 209 determinations were entered, almost all of them coming from California agencies. Nevada has entered no determinations during this five year time period. Figure 11 shows the proportional entries by State for 2001 and the years 1997 through 2000, respectively.

Figure 11 - Number of Determinations Ordered by State for Region 9 (1997 - 2001)

EPA REGION 10

One determination, entered by Washington, was added to the RBLC from EPA Region 10 in 2001. The RBLC did visit Region 10 in late 2001. Information on a significant number of permits was collected and will be added to the RBLC in 2002. In the four previous years, 1997 through 2000, 15 determinations were entered. Idaho has entered no determinations during this five year time period, and Oregon and Alaska entered none during 2001. Figure 12 shows the proportional entries by State for 2001 and the years 1997 through 2000, respectively.

Figure 12 - Number of Determinations Ordered by State for Region 10 (1997 - 2001)

INDUSTRY ACTIVITY SUMMARY

Table 2 lists all of the available RBLC major process categories, with examples of individual process types within each group. The process type examples presented in Table 2 are not meant to be definitive exhaustive lists of all process types within a process category. Instead, they represent some of the more recognizable types within a given group. A complete list of all process types can be found in Appendix B.

TABLE 2. RBLC Major Process Categories

Process Group Number/Name	Process Type Examples
10.000 COMBUSTION	Fuel Oil Combustion (Boilers) Coal Combustion (Boilers) Wood Waste Combustion (Boilers) Natural Gas Turbines Gasoline Engines Process Gas Turbines
20.000 WASTE DISPOSAL	Municipal Waste Combustors/Incinerators Hazardous Waste Incineration Hazardous Waste Site Remediation Industrial Landfills Contaminated Water Treatment
30.000 WOOD PRODUCTS INDUSTRY	Reconstituted Panelboard Plants (waferboard, particleboard, etc.) Paper Production Woodworking Plywood Manufacturing
40.000 ORGANIC EVAPORATIVE LOSSES	Plastic Parts & Products Surface Coating Petroleum Liquid Storage in Floating Roof Tanks Organic Solvent Cleaning & Degreasing Dry Cleaning Automotive Refinishing
50.000 PETROLEUM/NATURAL GAS PRODUCTION AND REFINING	Petroleum Refining Treating Processes Petroleum Refining Wastewater Treatment Oil and Gas Field Services

60.000 CHEMICALS MANUFACTURING	Phosphate Fertilizers Production Sulfuric Acid Plants Epoxy Resins Production Storage Tanks (SOCMI Chemicals) Rayon Production Pharmaceutical Production
70.000 FOOD AND AGRICULTURAL PRODUCTS	Vegetable Oil Production Alcoholic Beverages Production Bread Bakeries Feed and Grain Storage
80.000 METALLURGICAL INDUSTRY	Steel Foundries Lead Acid Battery Manufacturing Primary Lead Smelting Primary Aluminum Production
90.000 MINERAL PRODUCTS	Portland Cement Manufacturing Asbestos Manufacturing Brick Production Glass Manufacturing
99.000 MISCELLANEOUS SOURCES	Industrial Process Cooling Towers Leather Tanning Rubber Tire Production Geothermal Power

Figure 13 illustrates the distribution of process groups specified in the determinations entered for 2001 and for the years 1997 through 2000 at the national level. A determination may report more than one process, so totals in the graph will not exactly match those in Table 1. Instead, they represent the number of determinations containing a particular type of process. The major categories shown in Figure 13 contain multiple definitions of processes and consequently represent multiple processes as shown in Table 2. For instance, Process Category 10, Combustion, includes process groups for both external and internal combustion devices, each containing processes for each type of fuel that can be consumed.

The most frequently entered process group for the five-year period was combustion processes, followed distantly by organic evaporative loss and mineral products processes. For combustion sources, a trend towards natural gas combustion is developing. Nearly two-thirds of the combustion source determinations entered during 2001 contained a natural gas-fired device. This is an increase over previous years in which natural gas-fired devices were less than half of the total combustion sources and could indicate a trend towards less-polluting fuels. More internal combustion devices (i.e. turbines and IC engines) were permitted, outweighing boilers by nearly two to one. This continues the trend seen in recent years. Nearly one-fourth of the

combustion devices entered in 2001 are from Wisconsin (Region 5) and Florida (Region 4), many of them natural gas-fired. Both States contributed heavily to the RBLC in 2001.

Nearly all of the determinations added to the RBLC over the past five years under organic evaporative losses fell under the 41.000 category - Surface Coating/Printing/Graphic Arts, with over half of the determinations submitted in the past two years. There was a large surge in the number of surface coating processes added during 2001 due in part to an increase in submissions related to 41.014 - Paper, Plastic & Foil Web Surface Coating. During 2001, one-fourth of the processes were from this category. This reflects a large number of permitting actions in Michigan and Wisconsin. Forty percent of the determinations falling under the 41.000 category submitted during 2001 were from Wisconsin.

Mineral Products, process category 90.000, was consistently represented throughout the period. There was a slightly higher proportion of determinations added from 90.019 - Lime/Limestone Handling/Kilns/Storage/Manufacturing during the five-year period; however, there has been a strong surge in the number of Portland Cement Manufacturing (90.028) facilities. Most determinations entered were either from California, Wyoming, or Wisconsin, but particularly Wisconsin during 2001.

There was a large increase in 2001 in the number of entries under process category 30.000 - Wood Products. Forty-five percent of the entries in this process category were entered in 2001. Wisconsin, which had no entries prior to 2001, added 21 determinations during 2001. Thirteen of these entries were for Pulp and Paper Production, process category 30.004. Alabama had the next highest total with 19 determinations added to the RBLC since 1997. The remainder of the determinations were distributed across 17 States, with Arkansas, California, and Michigan being the major contributors among those.

The Metallurgical Industry, process category 80.000, also had a large number of entries over the past five years with nearly 75 percent of the submittals occurring in 2000 and 2001. Tennessee accounted for more than one-fourth of the determinations added since 1997 and nearly all of those added in 2000. This was due, in part, to the expansion of one particular facility, an iron foundry located in Etowah, TN. Wisconsin also had a large percentage of entries under process category 80.000, all occurring in 2001. Most of the determinations submitted nationwide were from process category 81.004, Iron Foundries, with 81.006, Steel Foundries, and 81.007, Steel Manufacturing, following distantly.

There was a surge of determinations from Chemical Manufacturing, process category 60.000, with over 30 percent of the 78 entries being entered in 2000. This is primarily due to significant additions from 62.000, Inorganic Chemicals Manufacturing. Florida added 12 determinations from 62.015, Sulfuric Acid Production, since 1997 with 10 of them added in 2000. Most of these entries were for fertilizer production facilities. The remainder of the process categories under Chemical Manufacturing were well-represented among several other States. Connecticut added 15 determinations during the past five years in this major category, with none of the entries occurring in 2001.

The remaining major categories are all under 50 total determinations over the past five years. No major trends can be seen emerging from these areas. However, it is worth noting that there is continuing activity in these categories and determinations are continuing to be added to the RBLC across many different types of industries.

As discussed in the national summary section above, Regions 5 and 4 contributed the largest share of determinations, accounting for over 50 percent of the determinations submitted in 2001. These two regions are represented by a wide range of processes in their entries, with a large portion of the processes being from combustion sources. In general, 2001 showed an overall increase in the number of determinations; most process categories were well-represented. Table 3 shows the distribution of process entries by region.

Figure 13 - Distribution of Entries by Process Group (1997 through 2001)

RBLC PROGRAM DEVELOPMENT

In 2001 the RBLC received the funding needed to implement major improvements and gather missing information. Funds continue to be available for this work in 2002. To consider user needs and effectively use these resources, the RBLC hosted five public workshops at the following locations: (1) Washington, DC on June 6, 2001; (2) Research Triangle Park, NC on June 13, 2001; (3) Denver, CO on July 16, 2001; (4) Chicago, IL on August 22, 2001; and (5) San Francisco, CA on January 9, 2002. Summaries of each workshop and a list of action items from all workshops are posted on the RBLC Public Workshops Web page. The RBLC Public Workshops Web page can be accessed from either the CATC or RBLC home page, or can be reached directly at <<http://www.epa.gov/ttn/catc/workshop.html>>.

Five problem areas have been identified that need to be addressed. These are:

1. Incomplete Data: The RBLC does not contain all BACT and LAER determinations and, for those determinations that are included, the information is incomplete. Most submissions are voluntary and it is difficult to collect missing information.
2. Compliance not verified: In most cases the RBLC Web does not include information that confirms that a source was constructed and that compliance with the emission limits indicated in the data base (permit to construct) has been demonstrated. Although, data fields are provided, permitting agencies rarely update the RBLC data base to indicate that compliance with the emission limits in the permit have been verified.
3. No Cost Information: Although data fields are provided, virtually no cost information has been entered or provided by agencies.
4. Emerging Technologies: The RBLC data base indicates the technologies and emission limits that have been approved in permits. Users have expressed a need to identify and obtain information on new and emerging technologies that may be more effective in reducing air pollution and/or more cost effective.
5. User-friendliness: The RBLC Web can be confusing to new users and, at times, can even challenge more experienced users. We would like to make the Clearinghouse more user-friendly and improve the quality of service offered.

The RBLC Subgroup, NSR Advisory Subcommittee, Clean Air Act Advisory Committee did make recommendations in January 1994 that generally covered most of the problems noted above. To a large extent, RBLC workshop participants echoed these recommendations, but were able to relate them to specific action items that addressed the RBLC Web as it now exists and the Clearinghouse's current mode of operation.

The RBLC is now focusing on these action items and continues to implement needed improvements based on the recommendations of the RBLC Subgroup and Workshop attendees. A summary of these improvements and related activities follows.

On-Going Initiatives:

- Improved coordination with EPA Regional Offices
- Quality assure existing RBLC data base and identify missing information
- Visits to EPA Offices in Regions 1, 2, 3, 6, 7, and 10 were conducted in 2001 to collect missing information from their permit files. Visits to Regions 4, 5, 6 and 9 are scheduled for 2002
- Visits to State agencies in New York, New Jersey and Virginia were conducted in 2001 to acquire data not in regional office files. Additional visits to State and local permitting agencies will be scheduled as necessary in 2002.
- Outreach activity - in addition to the five public workshops noted above, a new users' manual and annual reports in a new and more readable format are available.
- Data entry - new RBLC Standalone Editor (off-line PC based software for users to enter and format RBLC data for uploading to the RBLC data base) is now available.
- On-line data entry quality assurance utilities have been implemented.
- Linkage - links to related technical sites, software tools, State and local permitting agency sites/contacts have been added.
- New and improved on-line context sensitive HELP is now available.
- Direct access to process and pollutant data from user-generated query results pages has been provided.
- Improvements in response to the numerous public workshop comments have been and continue to be implemented
- More definitive process identification system (upgrade process codes to enhance search capabilities)
- Update Standard Industrial Classification (SIC) codes to the new North American Industrial Classification System (NAICS).

Under consideration

- Customized retrievals / output reports
- Cost data acquisition
- Provide links between:
 - RBLC main (permits) data base, RBLC regulation data base, and Code of Federal Regulations;
 - RBLC main data base to permits on State and local agency Web pages
- Training - Develop on-line tutorial and/or CD based training material
- Restore Ranking Capability (ability to list most stringent to least stringent emission limits and technologies for a specific type of process and pollutant)
- New Clean Air Technology Data Base (direct access to new technology /venders)
- Industry Sector Technology Assessments - reports that identify and evaluate technology

used in a particular industry sector, including their effectiveness and cost; also emerging technology and trends

- Emerging Technology Technical Bulletins - short reports that provide basic information on the availability, effectiveness, cost and application of new air pollution technology
- Graphic Display of RBLC Sources, Class I Areas and other GIS information

Other improvements and revisions to the system will continue to be considered as a result of contacts with various State and local agencies. These improvements and revisions will be evaluated and made based on the recommendations of the State and local agencies that are entering or submitting determinations to the Clearinghouse. Watch the RBLC web page for more details on new capabilities of the RBLC Web.

All inquiries concerning RBLC and information contained in the data base should be directed to:

APPENDIX A
ABOUT THE RACT/BACT/LAER CLEARINGHOUSE

BACKGROUND

The Clean Air Act prescribes several technology-based limitations affecting new or modified air pollution sources: 1) new source performance standards (NSPS); 2) best available control technology (BACT); and 3) lowest achievable emission rate (LAER). New Source Performance Standards are uniform national emission standards set by EPA for specific categories of new or modified stationary sources. In addition to meeting NSPS when applicable, major new or modified sources must also install either BACT or LAER, both of which are determined on a case-by-case basis. In all cases, BACT or LAER must be at least as stringent as any applicable NSPS. The BACT requirement, which is a part of the Prevention of Significant Air Quality Deterioration program (Sections 165 and 169 of the Clean Air Act), applies to emissions in areas that are in attainment with National Ambient Air Quality Standards (NAAQS). The LAER requirement, which is a part of the Nonattainment Program (Sections 171 and 172 of the Clean Air Act), applies to emissions that affect areas that are not in attainment with the NAAQS. While the specific criteria governing a BACT, LAER, or NSPS emission limit vary, the general underlying approach for all such determinations is to require "best control" on all major new or modified sources. Since 1977, State and local air pollution control agencies have gradually assumed primary responsibility for making BACT and LAER determinations. As this authority was decentralized from the Federal government, it became important that information be made available to control agencies to assist them in making control technology determinations in a nationally consistent manner. As a result, the BACT/LAER Clearinghouse was established in 1979.

The 1990 Clean Air Act Amendments (CAAA) mandated several minor changes to the BACT/LAER Clearinghouse. Although the changes were minor, State and local agencies should note them for future consideration. The first change involved the name and an addition to the type of data contained in the Clearinghouse. The name changed to the RACT/BACT/LAER Clearinghouse (RBLC) and now includes Reasonably Available Control Technology (RACT) determinations. RACT is defined as the lowest emission limitation that a particular source is capable of meeting by application of control technology that is reasonably available considering technological and economic feasibility. RACT is the minimum requirement EPA can accept for existing major sources in State non-attainment plans. Control Technique Guideline (CTG) documents were assembled by the EPA to assist State and local air pollution control agencies in determining the level of control that should be required within each area. The RBLC accepts case-by-case RACT decisions, as well as general RACT requirements, to assist State and local agencies in determining what level of control other areas of the country are requiring and, in turn, what level of control should be required within their jurisdiction.

The second change mandated by the 1990 CAAA involves LAER determinations. Prior to the 1990 CAAA, all submittals to the Clearinghouse were voluntary. However, Section 173(d) of the 1990 CAAA now mandates that State and local agencies submit any and all LAER determinations that they issue.

The basic purposes of the RBLC are to: 1) provide State and local air pollution control agencies, industry, and the public with current information on case-by-case control technology

determinations that are made nationwide, and 2) promote communication, cooperation, and sharing of control technology information among the permitting agencies.

THE RBLC WEB

The RBLC's primary vehicle for sharing control technology information is the RBLC Web. The Clearinghouse provides on-line querying of its data base and makes the results available for viewing on-screen or downloading to a PC. This information system also supports direct submittals of control technology determinations by permitting agencies. Routine access to the data base is available to anyone who has a personal computer with access to the World Wide Web.

The RBLC Web is part of the Office of Air Quality Planning and Standards Technology Transfer Network (TTN) World Wide Web (Web) site. It can be accessed through the Clean Air Technology Web on the TTN. Users of the RBLC Web can search on any number of different items. Searchable items have been designated as "required" fields for new determinations.

The graphical environment of the Web supports a simplified search procedure. Users select a data base of interest (see below) and one or more searchable fields from drop-down lists displayed in their web browser and/or fill in text boxes with the value they are trying to match to execute the query. The query finds all determinations in the RBLC data base that match the specified criteria and displays the results for viewing in the browser. In addition, several output formats are provided for downloading or printing.

Permit data in the Clearinghouse has been segmented into three searchable data bases. The current data base (also known as the permanent data base) contains completed RBLC determinations entered during the past 10 years. The second data base is the Transient/Early Notification data base, which provides a work space for users to enter and update determinations. RBLC staff regularly review the transient data base and promote accurate and complete determinations into the permanent data base. The third data base, the historical data base, contains completed RBLC determinations entered more than 10 years ago.

The RBLC also maintains a data base of federal, State, and local regulations, which includes summaries of federal regulations enacted in response to the Clean Air Act. These rules include Maximum Achievable Control Technology (MACT) standards, National Emission Standards for Hazardous Air Pollutants (NESHAP), New Source Performance Standards (NSPS), and Control Techniques Guideline (CTG) documents that specify requirements for Reasonably Available Control Technology (RACT). The regulation data base offers options that allow you to scan or query the rules data. The query option brings the power of user-defined queries to the complex details of air pollutant emissions regulations. Using the same user-friendly browser interface as the RBLC's permit data base, users can build a query to locate pertinent regulations for a particular pollutant or process or for a broad array of other criteria. You can also bypass the query step and go directly to viewing a list of all the federal and State regulations.

APPENDIX B
DETAILED LISTING OF PROCESS TYPE CODES

PROCESS TYPE CODE LIST

No. CATEGORY

10.000 COMBUSTION

11.000 EXTERNAL COMBUSTION

- 11.001 Bagasse Combustion
- 11.002 Coal Combustion
- 11.006 Fuel Oil Combustion
- 11.003 Lignite Combustion
- 11.004 Multiple Fuels Combustion
- 11.005 Natural Gas Combustion
- 11.007 Waste Oil Combustion
- 11.008 Wood/Wood Waste Combustion
- 11.999 Other External Combustion Sources

15.000 INTERNAL COMBUSTION

- 15.001 Aviation Fuels
- 15.002 Diesel Fuel
- 15.006 Fuel Oil
- 15.003 Gasoline
- 15.007 Multiple Fuels
- 15.004 Natural Gas
- 15.005 Process Gas
- 15.999 Other Internal Combustion Sources

20.000 WASTE DISPOSAL

21.000 MUNICIPAL WASTE

- 21.001 Municipal Waste Combustors/Incinerators
- 21.002 Municipal Waste Landfills
- 21.003 Publicly Owned Treatment Works (POTW) Emissions (except 21.004)
- 21.004 Sewage Sludge Incineration
- 21.999 Other Municipal Waste Processing/Disposal Facilities

22.000 HAZARDOUS WASTE

- 22.007 Asbestos Demolition, Renovation, and Disposal
- 22.001 Benzene Waste Treatment
- 22.006 Contaminated Soil Treatment
- 22.002 Hazardous Waste Incineration
- 22.003 Hazardous Waste Landfills
- 22.004 Site Remediation
- 22.005 Treatment, Storage and Disposal Facilities (TSDF) (except 22.002, 22.003 & 22.006)
- 22.999 Other Hazardous Waste Processing/Disposal Facilities

29.000 OTHER WASTE DISPOSAL (except 21 & 22)

- 29.001 Automobile Body Shredding/Incineration
- 29.002 Industrial Wastewater/Contaminated Water Treatment
- 29.003 Industrial Landfills
- 29.004 Medical/Infectious Waste Incineration
- 29.999 Other Waste Disposal Sources

30.000 WOOD PRODUCTS INDUSTRY

- 30.001 Charcoal
- 30.002 Kraft Pulp Mills
- 30.003 Plywood and Veneer Operations
- 30.004 Pulp and Paper Production other than Kraft
- 30.005 Reconstituted Panelboard Plants (waferboard, particleboard, etc.)
- 30.006 Wood Treatment
- 30.007 Woodworking
- 30.999 Other Wood Products Industry Sources

40.000 ORGANIC EVAPORATIVE LOSSES

41.000 SURFACE COATING/PRINTING/GRAPHIC ARTS

- 41.001 Aerospace Surface Coating
- 41.002 Automobiles and Trucks Surface Coating (OEM)
- 41.003 Automotive Refinishing
- 41.004 Can Surface Coating
- 41.005 Fabric Coating/Printing/Dyeing (except 41.017)
- 41.006 Flatwood Paneling Surface Coating
- 41.007 Flexible Vinyl & Urethane Coating/Printing
- 41.008 Large Appliance Surface Coating

41.026 Leather Surface Coating
41.009 Magnetic Tape Surface Coating
41.010 Magnetic Wire Surface Coating
41.011 Metal Coil Surface Coating
41.012 Metal Furniture Surface Coating
41.013 Miscellaneous Metal Parts and Products Surface Coating
41.014 Paper, Plastic & Foil Web Surface Coating (except 41.007 & 41.018)
41.015 Plastic Parts for Business Machines Surface Coating
41.016 Plastic Parts & Products Surface Coating (except 41.015)
41.017 Polymeric Coating of Fabrics
41.018 Pressure Sensitive Tapes and Labels Coating
41.019 Printing - Forms
41.020 Printing - News Print
41.021 Printing - Packaging
41.022 Printing - Publication
41.023 Printing/Publication (except 41.007 & 41.019-022)
41.024 Ship Building & Repair Surface Coating
41.025 Wood Products/Furniture Surface Coating (except 41.006)
41.999 Other Surface Coating/Printing/Graphic Arts Sources

42.000 LIQUID MARKETING (PETROLEUM PRODUCTS, GASOLINE, VOL)

42.001 Gasoline Bulk Plants
42.002 Gasoline Bulk Terminals
42.003 Gasoline Marketing (except 42.001 & 42.002)
42.004 Petroleum Liquid Marketing (except 42.001-003 & 42.005-006)
42.005 Petroleum Liquid Storage in Fixed Roof Tanks
42.006 Petroleum Liquid Storage in Floating Roof Tanks
42.009 Volatile Organic Liquid Storage
42.010 Volatile Organic Liquid Marketing (except 42.009)
42.999 Other Liquid Marketing Sources

49.000 ORGANIC EVAPORATIVE LOSSES (except 41 & 42)

49.001 Aerosol Can Filling
49.012 Architectural & Industrial Maintenance (AIM) Coatings
49.013 Automobile Refinish Coatings
49.011 Consumer Products
49.002 Dry Cleaning - PERC/Chlorinated Solvents
49.003 Dry Cleaning - Petroleum Solvents
49.004 Fiberglass Boat Manufacturing
49.005 Fiberglass/Reinforced Polymer Products Manufacturing (except 49.004)
49.006 Halogenated Solvent Cleaners

- 49.007 Ink Manufacturing
- 49.008 Organic Solvent Cleaning & Degreasing (except 49.006)
- 49.009 Paint/Coating/Adhesives Manufacturing
- 49.010 Paint Stripping
- 49.999 Other Organic Evaporative Loss Sources

50.000 PETROLEUM/NATURAL GAS PRODUCTION AND REFINING

- 50.001 Oil and Gas Field Services
- 50.002 Natural Gas/Gasoline Processing Plants
- 50.003 Petroleum Refining Conversion Processes (cracking, CO boilers, reforming, alkylation, polymerization, isomerization, coking)
- 50.007 Petroleum Refining Equipment Leaks/Fugitive Emissions
- 50.004 Petroleum Refining Feedstock (blending, loading and unloading)
- 50.008 Petroleum Refining Flares and Incinerators (except acid gas/sulfur recovery unit incinerators - 50.006)
- 50.005 Petroleum Refining Separation Processes (distillation and light ends recovery)
- 50.006 Petroleum Refining Treating Processes (hydrodesulfurization, hydrotreating, chemical sweetening, acid gas removal, deasphalting, sulfur recovery units, acid gas/sulfur recovery unit incinerators)
- 50.009 Petroleum Refining Wastewater and Wastewater Treatment
- 50.010 Shale Processing
- 50.999 Other Petroleum/Natural Gas Production & Refining Sources (except 50.001-010 and 42.000 - Liquid Marketing)

60.000 CHEMICALS MANUFACTURING

61.000 AGRICULTURAL CHEMICALS MANUFACTURING

- 61.001 2,4-D Salts and Esters Production
- 61.002 4-Chloro-2-Methylphenoxyacetic Acid Production
- 61.003 4,6-Dinitro-o-Cresol Production
- 61.004 Captafol (tm) Production
- 61.005 Captan (tm) Production
- 61.006 Chloroneb (tm) Production
- 61.007 Chlorthalonil (tm) Production
- 61.008 Dacthal (tm) Production
- 61.012 Fertilizer Production (except 61.009)
- 61.009 Phosphate Fertilizers Production
- 61.010 Sodium Pentachlorophenate Production
- 61.011 Tordon Acid Production
- 61.999 Other Agricultural Chemical Manufacturing Sources

62.000 INORGANIC CHEMICALS MANUFACTURING

- 62.001 Ammonium Sulfate Production - Caprolactam By-Product Plants
- 62.002 Antimony Oxides Manufacturing
- 62.003 Chlorine Production
- 62.016 Chloroalkali Production
- 62.004 Chromium Chemicals Manufacturing
- 62.005 Cyanuric Chemicals Manufacturing
- 62.006 Fume Silica Production
- 62.007 Hydrochloric Acid Production
- 62.017 Hydrofluoric Acid Production
- 62.008 Hydrogen Cyanide Production
- 62.009 Hydrogen Fluoride Production
- 62.020 Inorganic Liquid/Gas Storage & Handling
- 62.014 Nitric Acid Plants
- 62.010 Phosphoric Acid Manufacturing
- 62.011 Quaternary Ammonium Compounds Production
- 62.018 Sodium Carbonate Production
- 62.012 Sodium Cyanide Production
- 62.015 Sulfuric Acid Plants
- 62.019 Sulfur Recovery (except 50.006)
- 62.013 Uranium Hexafluoride Production
- 62.999 Other Inorganic Chemical Manufacturing Sources

63.000 POLYMER AND RESIN PRODUCTION

- 63.001 Acetal Resins Production
- 63.002 Acrylonitrile-Butadiene-Styrene Production
- 63.003 Alkyd Resins Production
- 63.004 Amino Resins Production
- 63.005 Butadiene-Furfural Cotrimer (R-11)
- 63.006 Butyl Rubber Production
- 63.007 Carboxymethylcellulose Production
- 63.008 Cellophane Production
- 63.009 Cellulose Ethers Production
- 63.010 Epichlorohydrin Elastomers Production
- 63.011 Epoxy Resins Production
- 63.012 Ethylene-propylene Rubber Production
- 63.013 Flexible Polyurethane Foam Production
- 63.014 Hypalon (tm) Production
- 63.015 Maleic Copolymers Production
- 63.016 Methylcellulose Production
- 63.017 Methyl Methacrylate-Acrylonitrile-Butadiene-Styrene Production
- 63.018 Methyl Methacrylate-Butadiene-Styrene Terpolymers Production

- 63.019 Neoprene Production
- 63.020 Nitrile Butadiene Rubber Production
- 63.021 Non-Nylon Polyamides Production
- 63.022 Nylon 6 Production
- 63.023 Phenolic Resins Production
- 63.024 Polybutadiene Rubber Production
- 63.025 Polycarbonates Production
- 63.026 Polyester Resins Production
- 63.027 Polyether Polyols Production
- 63.028 Polyethylene Terephthalate Production
- 63.029 Polymerized Vinylidene Production
- 63.030 Polymethyl Methacrylate Resins Production
- 63.031 Polystyrene Production
- 63.032 Polysulfide Rubber Production
- 63.033 Polyvinyl Acetate Emulsions Production
- 63.034 Polyvinyl Alcohol Production
- 63.035 Polyvinyl Butyral Production
- 63.036 Polyvinyl Chloride and Copolymers Production
- 63.037 Reinforced Plastic Composites Production
- 63.038 Styrene-Acrylonitrile Production
- 63.039 Styrene Butadiene Rubber and Latex Production
- 63.999 Other Polymer and Resin Manufacturing Sources

64.000 SYNTHETIC ORGANIC CHEMICAL MANUFACTURING INDUSTRY (SOCMI)

- 64.001 Batch Reaction Vessels (except 69.011)
- 64.002 Equipment Leaks (valves, compressors, pumps, etc.)
- 64.003 Processes Vents (emissions from air oxidation, distillation, and other reaction vessels)
- 64.004 Storage Tanks (SOCMI Chemicals (loading/unloading, filling, etc.))
- 64.005 Transfer of SOCMI Chemicals (loading/unloading, filling, etc.)
- 64.006 Wastewater Collection & Treatment
- 64.999 Other SOCMI Industry Sources

65.000 SYNTHETIC FIBERS PRODUCTION

- 65.001 Acrylic Fibers/Modacrylic Fibers Production
- 65.002 Rayon Production
- 65.003 Spandex Production
- 65.999 Other Synthetic Fibers Production Sources

69.000 CHEMICAL MANUFACTURING (except 61, 62, 63, 64 & 65)

69.001 Benzyltrimethylammonium Chloride Facilities
69.002 Butadiene Dimers Production
69.015 Carbon Black Manufacturing
69.003 Carbonyl Sulfide Production
69.004 Chelating Agents Production
69.005 Chlorinated Paraffins Production
69.006 Dodecanedioic Acid Production
69.007 Ethylidene Norbornene Production
69.008 Explosives Production
69.009 Hydrazine Production
69.010 OBPA/1,3-Diisocyanate Production
69.011 Pharmaceuticals Production
69.012 Photographic Chemicals Production
69.013 Phthalate Plasticizers Production
69.017 Propellant Manufacturing & Production
69.014 Rubber Chemicals Manufacturing
69.016 Soap & Detergent Manufacturing
69.999 Other Chemical Manufacturing Sources

70.000 FOOD AND AGRICULTURAL PRODUCTS (also see 61 - AGRICULTURAL CHEMICALS)

70.016 Alcohol Fuel Production
70.008 Alcoholic Beverages Production
70.001 Alfalfa Dehydrating
70.002 Baker's Yeast Manufacturing
70.003 Bread Bakeries
70.004 Cellulose Food Casing Manufacturing
70.005 Coffee Roasting
70.006 Cotton Ginning
70.007 Feed and Grain Handling, Storage & Processing (including Mills and Elevators)
70.009 Fish Processing
70.010 Fruit and Vegetable Processing
70.011 Meat Smokehouses
70.012 Roasting (except 70.005)
70.013 Starch Manufacturing
70.014 Sugar Cane Processing
70.015 Vegetable Oil Production
70.999 Other Food and Agricultural Products Sources

80.000 METALLURGICAL INDUSTRY

81.000 FERROUS METALS INDUSTRY

81.001 Coke By-product Plants
81.002 Coke Production (except 81.001)
81.003 Ferroalloy Production
81.004 Iron Foundries
81.005 Stainless Steel/Specialty Steel Manufacturing
81.006 Steel Foundries
81.007 Steel Manufacturing (except 81.005 & 81.006)
81.008 Steel Pickling - HCL Process
81.999 Other Ferrous Metals Industry Sources

82.000 NONFERROUS METALS INDUSTRY

82.016 Beryllium Processing and Manufacturing
82.001 Lead Acid Battery Manufacturing
82.002 Lead Acid Battery Reclamation
82.003 Lead Oxide and Pigment Production
82.004 Lead Products (except 82.001-002, 82.006 & 82.012)
82.005 Primary Aluminum Production
82.006 Primary Copper Smelting
82.007 Primary Lead Smelting
82.008 Primary Magnesium Refining
82.009 Primary Zinc Smelting
82.010 Secondary Aluminum Production
82.011 Secondary Brass & Brass Ingot Production
82.012 Secondary Copper Smelting & Alloying
82.013 Secondary Lead Smelting
82.014 Secondary Magnesium Smelting
82.015 Secondary Zinc Processing
82.999 Other Non-Ferrous Metals Industry Sources

90.000 MINERAL PRODUCTS

90.001 Alumina Processing
90.035 Asbestos Manufacturing
90.002 Asphalt/Coal Tar Application - Metal Pipes
90.003 Asphalt Concrete Manufacturing
90.004 Asphalt Processing (except 90.002, 90.003 & 90.034)
90.034 Asphalt Roofing Products Manufacturing
90.017 Calciners & Dryers and Mineral Processing Facilities
90.005 Calcium Carbide Manufacturing
90.006 Cement Manufacturing (except 90.028)
90.007 Chromium Refractories Production
90.008 Clay and Fly Ash Sintering

90.009 Clay Products (including Bricks & Ceramics)
90.010 Coal Conversion/Gasification
90.011 Coal Handling/Processing/Preparation/Cleaning
90.012 Concrete Batch Plants
90.013 Elemental Phosphorous Plants
90.014 Frit Manufacturing
90.015 Glass Fiber Manufacturing (except 90.033)
90.016 Glass Manufacturing
90.018 Lead Ore Crushing and Grinding
90.019 Lime/Limestone Handling/Kilns/Storage/Manufacturing
90.020 Mercury Ore Processing
90.021 Metallic Mineral/Ore Processing (except 90.018, 90.020 & 90.031)
90.022 Mineral Wool Manufacturing
90.023 Mining Operations (except 90.032)
90.024 Non-metallic Mineral Processing (except 90.011, 90.019, 90.017, 90.026) (NOTE: This category includes stone quarrying, sand and gravel processing, gypsum processing, perlite processing and all other non-metallic mineral/ore processing.)
90.026 Phosphate Rock Processing
90.027 Phosphogypsum Stacks
90.028 Portland Cement Manufacturing
90.029 Refractories
90.031 Taconite Iron Ore Processing
90.032 Underground Uranium Mines
90.033 Wool Fiberglass Manufacturing
90.999 Other Mineral Processing Sources

99.000 MISCELLANEOUS SOURCES

99.001 Abrasive Blasting
99.002 Chromic Acid Anodizing
99.003 Comfort Cooling Towers
99.004 Commercial Sterilization Facilities
99.005 Decorative Chromium Electroplating
99.006 Electronics Manufacturing (except 99.011)
99.013 Electroplating/Plating (except Chrome - 99.002, 99.005 & 99.007)
99.019 Geothermal Power
99.007 Hard Chromium Electroplating
99.008 Hospital Sterilization Facilities
99.009 Industrial Process Cooling Towers
99.017 Leather Tanning
99.014 Polystyrene Foam Products Manufacturing
99.016 Polyurethane Foam Products Manufacturing
99.020 Rocket Demilitarization
99.010 Rocket Engine Test Firing

99.015 Rubber Tire Manufacturing and Retreading
99.011 Semiconductor Manufacturing
99.018 Synthetic Fuels Production (except 70.016 & 90.010)
99.012 Welding & Grinding
99.999 Other Miscellaneous Sources

APPENDIX C

RBLC DATA ENTRY INFORMATION

PROCEDURES FOR FUTURE SUBMISSIONS TO THE CLEARINGHOUSE

The RBLC is intended to be a dynamic program. Periodic updates and new listings are welcome. Submissions by State and local control agencies are entirely voluntary except for LAER determinations, which must be submitted to the Clearinghouse. Without submittals, however, the viability and usefulness of the program are jeopardized. Agencies are encouraged to make formal submittals at any time by using the on-line submittal procedures. As with any automated information system, the RBLC Web offers flexible, user-defined queries and a variety of report formats. Needed information can be quickly accessed in whatever level of detail is appropriate.

The Clearinghouse supports a variety of data submittal procedures. The data-entry module of the RBLC Web allows designated users in regional, State, and local air pollution control agencies direct on-line update capability. Designated users may obtain a password that allows them to access the RBLC Web Edit module. The preferred submittal method is on-line entry, but it does require a connection to the Internet during entry. A stand-alone version will be available in July, 2001 so that users can enter **NEW** determinations on their local PCs without an Internet connection. After completing data entry on the stand-alone editor, users would forward their determinations by email or on a floppy disk to the Clearinghouse for inclusion in the on-line data base. With either on-line or stand-alone input, data entered by designated users is placed into a searchable transient data base on the Web where quality assurance procedures are performed. Once the data is checked, it is promoted into the current RBLC data base. Designated users can access the data-entry module to make changes to current entries in the Clearinghouse. (The stand-alone editor cannot be used to edit determinations previously entered into the on-line RBLC data base).

For those who wish to make hardcopy (paper) submittals, the submittal form and instructions for data submittal are located below and available for download on the RBLC Web. The form can be reproduced and used to prepare or submit new determinations and/or to update existing information. Completed forms should be submitted to the Clearinghouse at the address listed below.

Submittals can be made as soon as the permit application is received. It is not necessary to wait until the final permit is issued. The RBLC allows dates to be flagged as either estimated or actual; so that it is not necessary to know the exact schedule for the permitting and operation of the facility. Subsequent to the initial submittal, agencies may use the RBLC to update the status of the application.

All inquiries concerning RBLC submittals should be directed to:

RACT/BACT/LAER Clearinghouse (E143-03)

INSTRUCTIONS FOR COMPLETING RACT/BACT/LAER CLEARINGHOUSE INPUT FORM

1. **Company Name/Site Location:** Insert name, State, and County of the proposed facility. The address should be the location of the proposed facility not the address of the parent company unless they are the same.
2. **Plant/Facility Contact Information:** There is a person knowledgeable about the process at the plant or facility being permitted. Enter the name, telephone numbers (voice and fax), e-mail address, and mailing address of the plant contact. (A check box has been provided if the plant's and the plant contact's physical address are the same.)
3. **Permitting Agency Contact Information:** Indicate the person at the permitting agency to whom requests should be directed. This should be the person most capable of responding to factual questions concerning the source and processes subject to this permitting action. Please provide area code with the phone number, E-mail address, and conventional mail address.
4. **Physical Plant Location Information:** List the Universal Transverse Mercator (UTM) coordinates and UTM Zone of the facility being permitted. (This information is usually listed on United States Geological Survey (USGS) maps of the area where the facility is physically located.) The UTM coordinates are reported as Easting (X) and Northing (y). Easting indicate the horizontal or x coordinate within the UTM Zone for the source and Northing indicate the vertical or y coordinate within the UTM Zone for the source. The RBLC needs this information to determine proximity of the source to Class I areas (e.g., National Parks, Wilderness Areas, etc.). Please list the names of the Class One Areas within 100km of the source and Class One areas located within 100 to 250km of the source and their distance to the source.
5. **Permit/File Number:** This should be the identification number assigned by the agency that issued the permit. (Please Note - Each permit with a different permit number should be entered separately. Most of the time one permit number will cover a number of processes/pollutants in a plant. Some agencies issue one permit number per process and this can lead to one plant (physical location) having many individual permit numbers. We ask that you enter each of these individual permits into it's own RBLC determination. You could list the separate permit numbers in the Facility Notes area of the determination, but this would mean that individuals that search the data base will not be able to find that determination based on a Permit Number search. Since this type of search is done fairly often, we prefer that you list each individual permit number in it's own RBLC determination.)

6. **ID Numbers and Codes:** Fill-in the requested AIRS identification number, if available, and the SIC/NAICS code.

7. **Scheduling Information:** Permitting scheduling dates stored include:

- receipt of application (estimated or actual)
- final permit issued (estimated or actual)
- start-up operation (estimated or actual)
- compliance verification (estimated or actual)

Please enter all of the scheduling information available.

8. **Plantwide Emissions/Emissions Increase Information:** Provide the name of each pollutant emitted in significant amounts and indicate the maximum amount of emissions (tons/year) that is anticipated for each pollutant (facility-wide, all processes) under this permit. (If you have a Plantwide Emission for a pollutant that is not in the drop down list, please list it in the Facility Notes area of the determination.)

9. **Plantwide Information:** Please describe the facility being permitted. Descriptions should be summary and brief. Examples are as follows:

Plant Level - In brief terms, indicate what kind of plant this is; for example: Integrated Steel Plant, Primary Aluminum Production, Publication Printing, Coil Coating, Power Plant, Oil Refinery; Coffee Roasting; Wastewater Treatment Plant; etc. A detailed narrative about the plant is not needed.

Source Level - List major processes that are part of the permitted source; for example: boiler, turbine, coke oven, rotogravure printing press, solid waste incinerator, coating line, lead smelter, air oxidation process, volatile organic liquid storage, etc. A detailed narrative about the process is not needed.

Fuel Type - List all fuels that will be used at this facility; for example: coal, # 2 distillate oil, process gas, etc. Again, a detailed narrative about the fuels used is not necessary.

Pollution Abatement Strategy - List all major pollution prevention and control systems/devices that will be used to reduce or eliminate air pollution; for example: powder coatings, low sulfur fuel, electrostatic precipitator, carbon adsorption, etc.

10. **Facility Notes:** This section is for the completion or elaboration of any of the above items where space was a problem. Also, any information that you feel other agencies

should know about this determination should appear here. Notes are typically used for the following:

- A More than one permit number [See note under Permit Number.]
- A More detail on a particular process
- A More than one contact person
- A Further explanation regarding the designation of a source as new or modified
- A Further explanation of the emission limit or the support documentation associated with setting the limit (i.e., limit based on design or stack test)

11. **Process Description:** List all processes subject to this permit by name (e.g., kiln, boiler) for which a throughput limit, operating limit, emission limit, control strategy, performance or equipment standard has been specified. Use additional pages as necessary. Additional information on a process may be placed in the Process Notes section.

Process name or process equipment should be listed using one of the process categories listed in Appendix C (Detailed Listing of Proposed Process Categories). A descriptor may be added behind the generic category name. For example,

- Boiler, coal-fired, 3 each
- Kiln, 3 each
- Conveyors, coal/limestone
- Furnace, arc
- Boiler, recovery
- Boiler, power
- Engines, gas-fired

12. **Process Type Code:** A code assigned to each process (see Appendix B) used to categorize determinations. (Please try and avoid using the codes that end in "999" as they are catch-all categories. If you do not enter an RBLC Process code, we will try to figure it out. If we can't, you will get a phone call.)
13. **SCC Code:** This code is the standard source classification for processes used throughout the Office of Air at EPA.
14. **Throughput Capacity:** Indicate the maximum design capacity of the unit. Use the same units of measure used in the NSPS to describe the size of a source. Wherever possible, use the list of standardized abbreviations for process and emission limit - Appendix D.
15. **Compliance Verification:** This series of fields allows you to enter a yes or no response to the following questions:

- Compliance verified?
- Method of confirmation:
 - Stack testing?
 - Other testing?
 - Inspection?
 - Calculations?

You may also enter a narrative description of other types of confirmation methods. (If you leave this field blank, it defaults to “no” to indicate that compliance was not verified.)

16. **Process Notes:** This field should contain any additional information on the process being permitted.
17. **Pollutant(s) Emitted:** Make an entry for each pollutant or parameter for which a control requirement or other restraint has been specified (PM, SO₂, CO₂, NO₂, opacity, or others). Use a separate block for each entry, and identify the pollutant and provide its Chemical Abstracts (CAS) number. Use the following standard abbreviations for these common pollutants whenever possible:

PM	Particulate Matter
SO ₂	Sulfur Dioxide
NO ₂	Nitrogen Oxides
CO	Carbon Monoxide
VOC	Volatile Organic Compounds
VE	Visible Emissions
TRS	Total Reduced Sulfur
F	Fluoride
Be	Beryllium
H ₂ S	Hydrogen Sulfide
Hg	Mercury
VC	Vinyl Chloride

Abbreviations for other pollutants are listed in Appendix D, along with CAS numbers.

18. **Emission Limit(s):** For consistency and ease of comparison, list the emission limit or rate in the units of measure listed in Appendix C or those used in AP-42. Wherever possible use the list of standard abbreviations (Appendix D).

There are multiple emission limits in the Clearinghouse, they are:

- Emission limit 1 and units: The primary emission limit listed in the permit.

- Emission limit 2 and units: If provided on the permit, these numbers represent any alternate or secondary emission measurements which the facility may make.
- Standardized limit and units: This limit allows comparison with other similar determinations in the RBLC. Standard units are provided for certain process types (see Appendix D) so that users can compare the entries in this field to determine the most stringent limits.

The base-line limit is no longer used in the RBLC data base.

19. **Emission Type:** A one-character field indicating whether the emission is fugitive, point-source, or area-source.
20. **Pollution Reduction Ranking Information:** Two pieces of information are requested: The number of options examined and the rank of the option selected. The "rank" is the number of the option selected when the options are ordered according to the performance of the system. Number 1 would be the best controlled system, number 2 would be the next best, etc.
21. **Regulatory Requirements Associated with Limit (Basis of Limit):** Indicate the regulatory requirement that precipitated establishing the limit presented, i.e., BACT-PSD, BACT-Other, LAER, MACT, RACT, GACT, NSPS, NESHAP, or Other. Do not list such items as stack test, design or others. These items generally represent the supporting information that may have been used to document or establish the given limit. Such items should be included in the notes section.

To facilitate the identification of limits use the following abbreviations:

- BACT-PSD (Prevention of Significant Deterioration)
- BACT-Other (regulated by state/local rules, not PSD)
- LAER (lowest Available Control Technology)
- MACT (Maximum Achievable Control Technology)
- RACT (Reasonably Available Control Technology)
- GACT (Generally Available Control Technology)
- NSPS (New source Performance Standards)
- NESHAP (National Emission Standards for Hazardous Air Pollutants)
- Other

22. **Pollution Reduction Method Description:** Describe the specific pollution prevention techniques and add-on equipment used to achieve the permitted emission limits. Specify "NONE" if no controls are feasible. Pollution prevention techniques include operational modifications, limits in the type and amount of raw materials used, limits on throughout or hours of operation, maintenance requirements, equipment specifications, or other limitations. Typical add-on equipment includes ESP, fabric filter, etc. Information in

this section may be supplemented under the "Notes" section. (Please note that if you specify "NONE" for this field and then enter something in the Description field, you will get a phone call asking you if you really meant to put "NONE.")

23. **Overall Efficiency %:** Enter the overall system pollution reduction efficiency, consisting of capture (hoods, ductwork, etc.) and collection (control device) efficiency. Any breakdown of efficiencies for capture or collection individually should be shown under "Notes." For P2, indicate the overall effectiveness of the P2 methods.
24. **Cost Data:** Pollution reduction costs include:
- Year of the dollar used in cost calculations
 - Cost verified by the permitting agency (yes or no)
 - Cost effectiveness in dollars per ton (annualized cost/tons of pollutant removed)
 - Capital cost of control equipment
 - Annual operation and maintenance cost for all control methods
 - Annualized cost (amortized capital cost + annual operation & maintenance costs)
25. **Pollutant Notes:** Use this to describe and other type of information you feel is important to your emission limit.

When you have completed the form, mail it to the following address:

12. SPONSORING AGENCY NAME AND ADDRESS Director, Office of Air Quality Planning and Standards Office of Air and Radiation U.S. Environmental Protection Agency Research Triangle Park, North Carolina 27711			13. TYPE OF REPORT AND PERIOD COVERED Final	
			14. SPONSORING AGENCY CODE EPA/200/04	
15. SUPPLEMENTARY NOTES				
16. ABSTRACT <p>The Clean Air Act as amended in 1977 prescribes several technology-based limitations affecting new or modified air pollution sources: 1) new source performance standards (NSPS), 2) best available control technology (BACT), and 3) lowest achievable emission rate (LAER).</p> <p>The basic purposes of the RACT/BACT/LAER Clearinghouse are 1) to provide State and local air pollution control agencies with current information on case-by-case control technology determinations that are made nationwide and 2) promote communication, cooperation, and sharing of control technology information among the permitting agencies. The information presented in this compilation was abstracted from per-construction permits and submitted voluntarily by the State and local air pollution control agencies. The Clearinghouse is intended as a reference for States and local agencies in making RACT/BACT/LAER decisions.</p> <p>The RBLC has now moved to the World Wide Web. The RBLC Web address is:</p> <p align="center">http://www.epa.gov/ttn/catc/</p> <p>Clicking on the RBLC logo on this page allows access to all of the information in the RBLC including interactive queries, customized reports, and downloadable copies of this and other RBLC documents.</p>
