

# Aligning the Data Planets: The National Environmental Exchange Network Connects Emissions Data

Mitch West, Network Coordinator  
NEI National User's meeting  
Portland, OR

June 3, 2008

## Summary

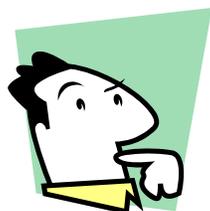

- Greenhouse Gas Data
  - Players
  - Opportunities
  - Challenges
- The Exchange Network
  - The right tool?
  - The right time?
- Around the next bend
  - How to get it right
  - What happens if we don't

## FY2008 Consolidated Appropriations Act:

- “... not less than \$3,500,000 shall be provided ... to develop and publish a ... final rule not later than 18 months after the date of enactment of this Act, to require mandatory reporting of greenhouse gas emissions ...”

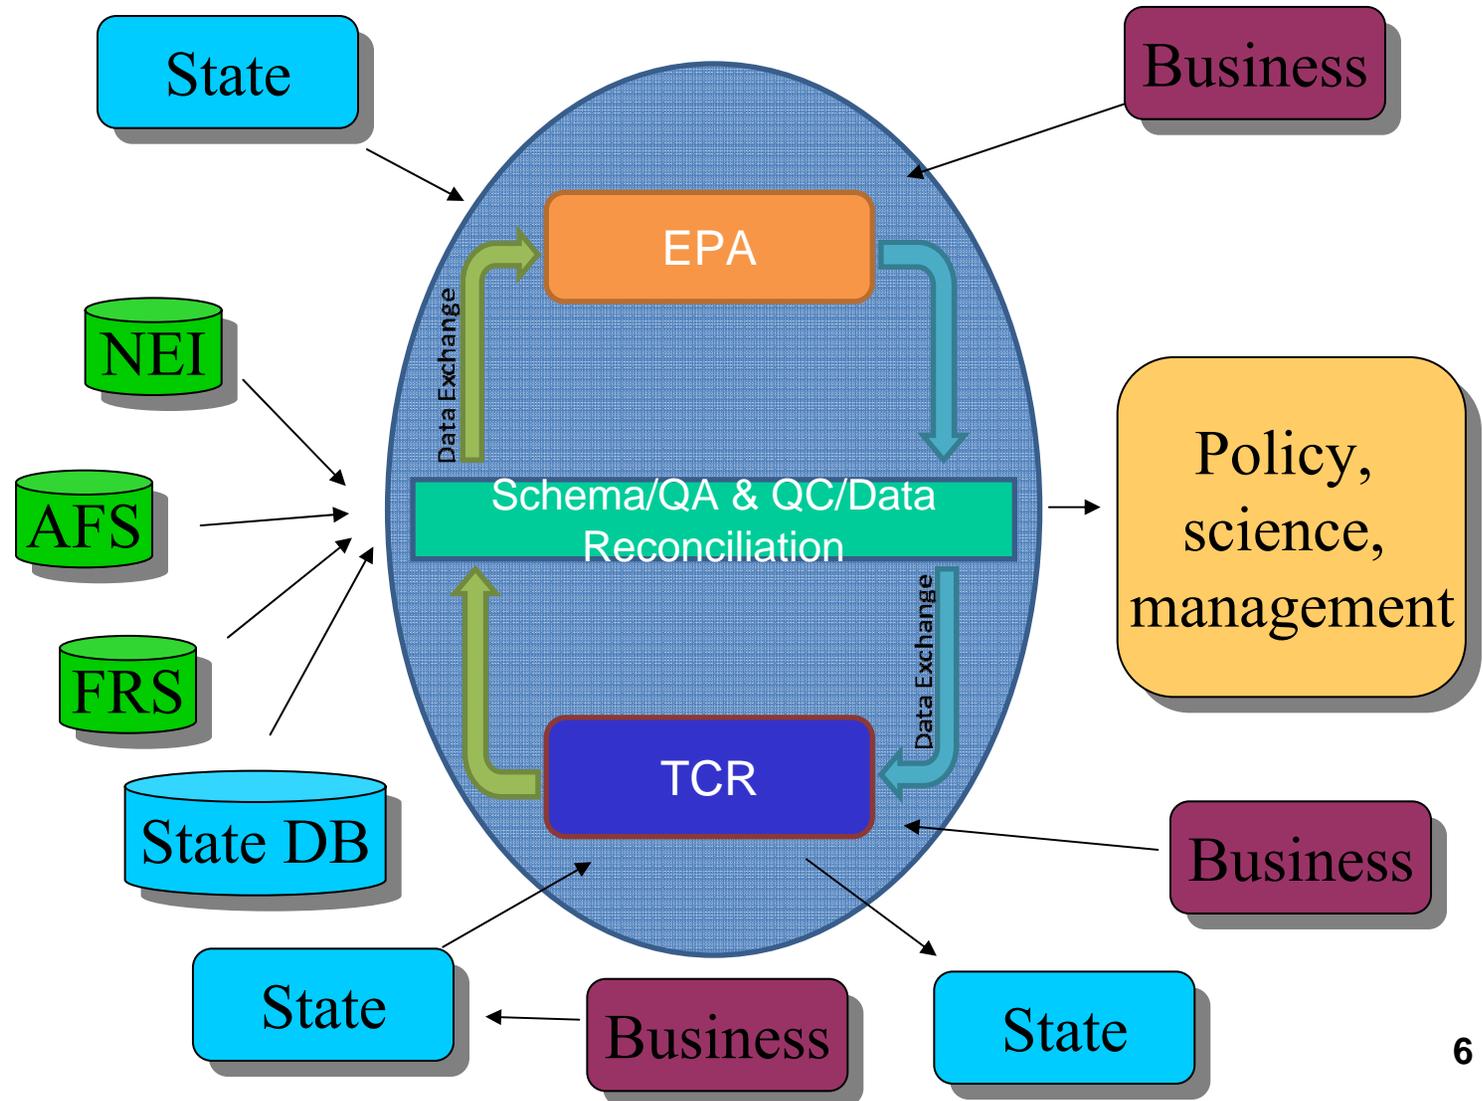

TCR may be the “900 Pound Gorilla”, but Uncle Sam is definitely putting on weight!

## And Others

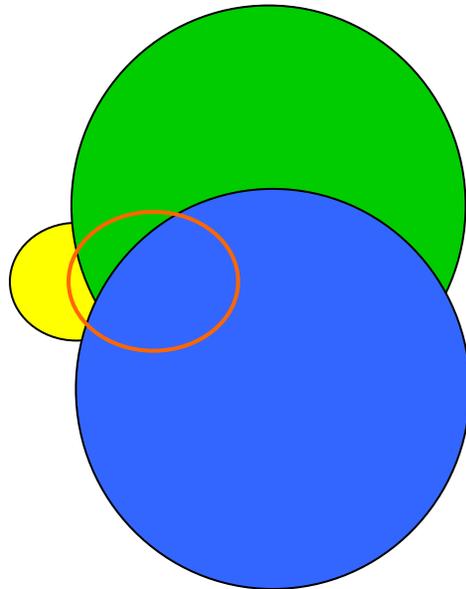

- **Consortia**
  - In the Northeast, RGGI has already held its first emissions trading auction—actual \$\$ involved
  - Several other regional consortia with real muscle and authority from members are gearing up
- **States**
  - In Maine, GHGs are part of emissions reporting along with criteria pollutants for Title V sources
  - Several states are phasing in reporting—and some reductions as well. Reporting really “counts” when legal consequences are involved.

# Potential Data Exchanges

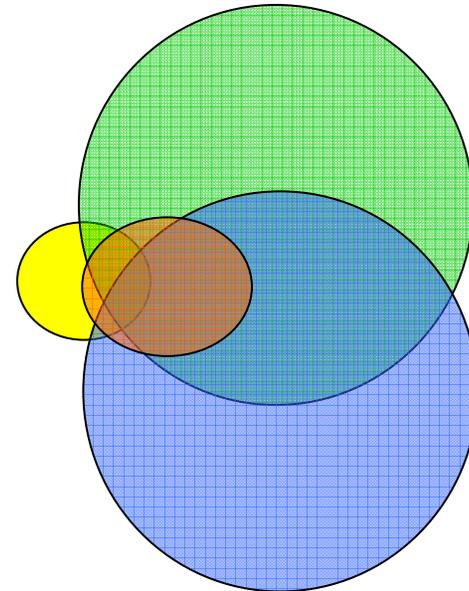

# Objective: Set Arithmetic

This...

$$\text{Total} = A + B - A \cap B + C - C \cap A - C \cap B$$

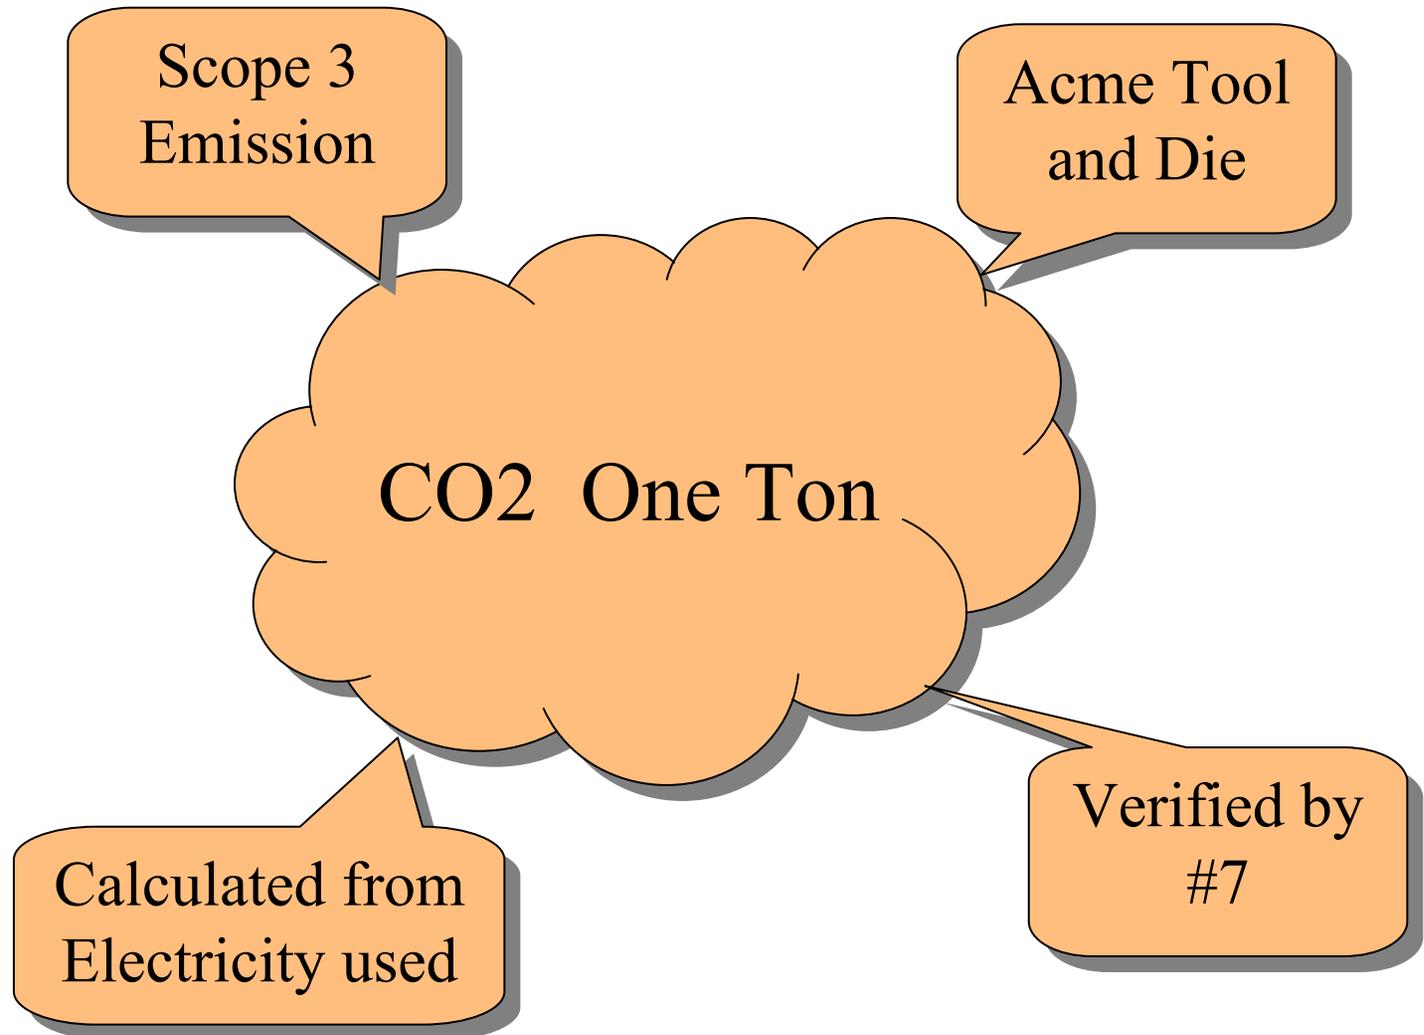

Not this

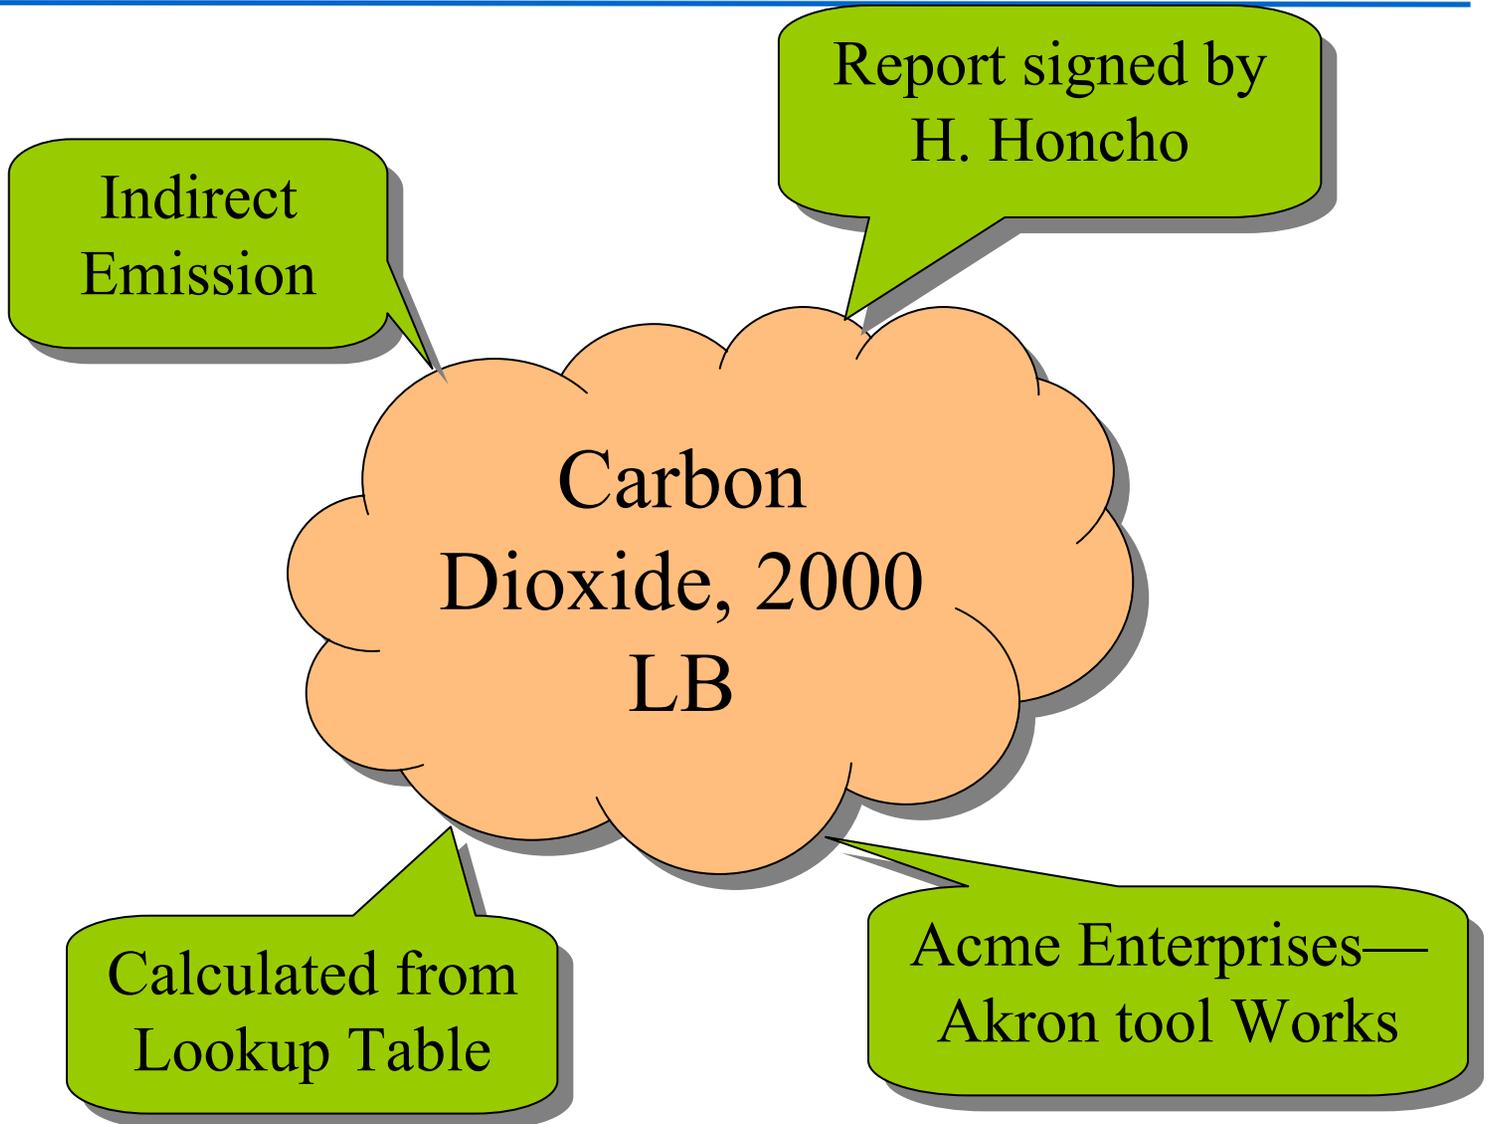

$$\text{Total} = A + B + C + D -$$

(who knows?)

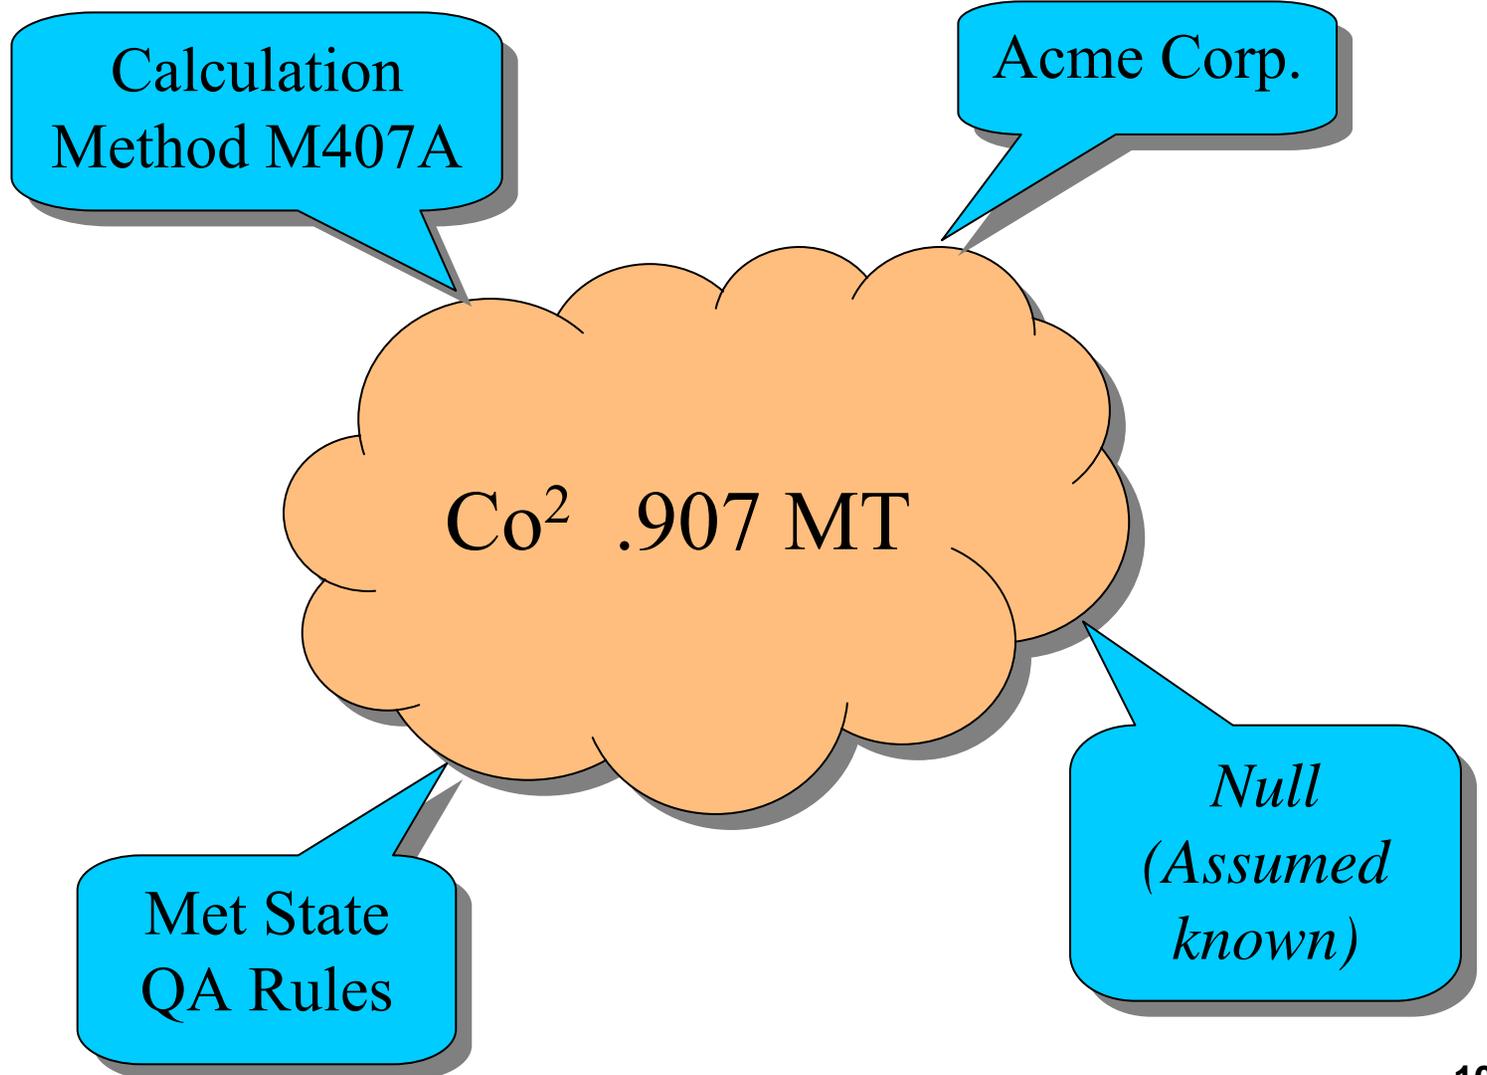

# Interoperability challenges

# Interoperability challenges

# Interoperability challenges

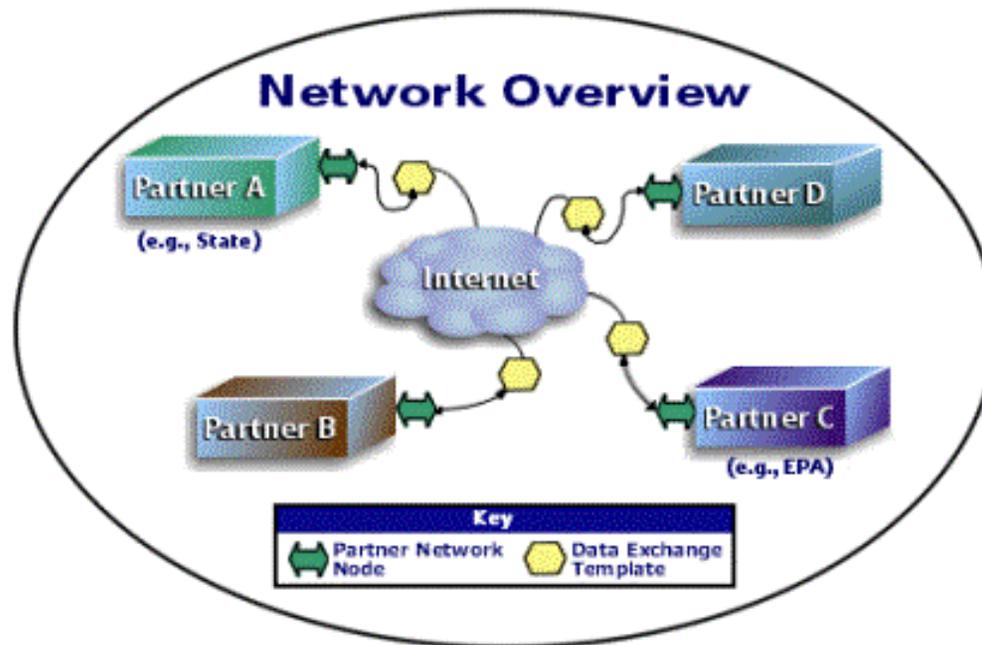

## Challenges Summary

---

- Scope
- Universe, Threshold
- Measurement Protocol
- Validation/QA Protocol
- Unique Identification

# What is the Exchange Network

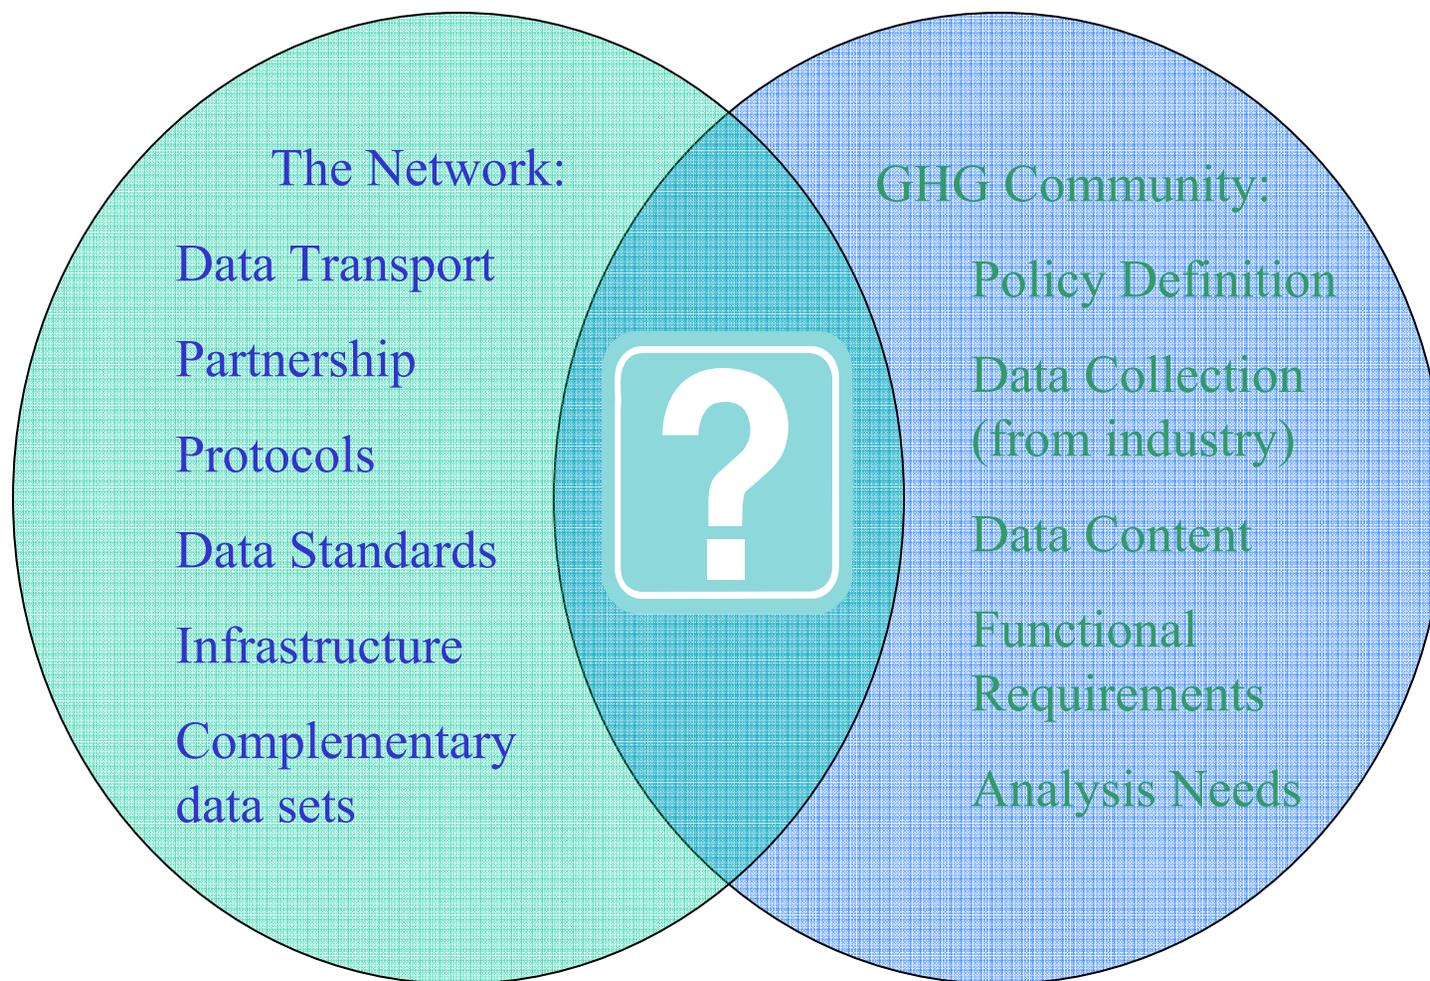

*A common approach to sharing data that lets you use your partners' data as if it is a part of your own systems.*

## Why?

- High demand for access to environmental information among partners
- Multiple approaches to information exchanges are inefficient and burdensome
- Partners modernizing information systems and migrating away from use of EPA national systems
- Use of integrated information technologies and approaches is on the rise
- Remove system dependencies

# Shared Problem Space

## Questions? Need Info
