

*Example: Wood Furniture Manufacturing Operation*

1. The Permittee shall not discharge or cause the discharge into the atmosphere emissions from any wood product surface coating in excess of 1.0 pound Volatile Hazardous Air Pollutants (VHAP) per pound of solids, as applied, for finishing materials (including stains, washcoats, sealers, topcoats, basecoats, and enamels).

2. The Permittee shall comply with the above emission limitation by one of the following:

a. The application of low solvent technology such that the VHAP content of each and every finishing material (including stains, washcoats, sealers, topcoats, basecoats, and enamels) utilized does not exceed 1.0 pound VHAP per pound of solids, as applied; or

b. The application of low solvent technology where the monthly weighted average VHAP content of all finishing materials (including stains, washcoats, sealers, topcoats, basecoats, and enamels) utilized does not exceed 1.0 pound VHAP per pound of solids, as applied; or

c. The use of any combination of compliant finishing materials, as described in paragraph 'a', and an averaging approach, as described in paragraph 'b'.
